Apple®

Apple IIGS System Software Version 5.0 adds powerful new operating capabilities to your Apple IIGS personal computer.

Apple IIGS® System Software Update Version 5.0

Apple IIGS® System Software Update Version 5.0

GS/OS

Created exclusively for the Apple IIGS personal computer, the GS/OS™ operating system dramatically improves the speed of program launching and disk access over that of previous versions of the system software. GS/OS allows applications to directly access files created under other file systems, such as those used by CD-ROM drives and AppleShare® file servers.

Network-Aware Finder

The Finder™ has been revised to allow access to the services of the AppleTalk® network system from the Finder desktop. The Icon Info dialog box has been revised to allow you to make use of the AppleShare server's file-sharing and security capabilities.

Control Panel Desk Accessory

This graphics-based program, available from every desktop application via the Apple menu, permits you to customize your Apple IIGS. You can set the date and time, configure slot assignments, log on to AppleShare file servers, select a networked printer, and much more.

Advanced Disk Utility and Installer

The Advanced Disk Utility lets you initialize, name, erase, and partition hard disks. You can create more partitions on large SCSI hard disks than was possible in the past. The Installer program allows you to customize your startup disks (including hard disks) for use with a variety of peripheral devices. You can also update startup disks for use with the latest system software, adding only the updates you need.

## Powerful Capabilities for AppleTalk Network Users

• Apple IIGS workstation users can access AppleShare file and print servers.
• Apple IIGS users can print to networked printers connected to a LocalTalk™ network.
• System Software Version 5.0 supports ProDOS® 8 and 16 environments, as well as GS/OS.
• Information can be shared with Apple® IIe ProDOS and Apple IIGS users, as well as with users of Macintosh® and MS-DOS computers.
• Apple IIGS workstation users can start up from an AppleShare file server without having a 3.5-inch disk drive.
• AppleShare-aware applications stored on the file server can be used by Apple IIGS workstations.
• System Software Version 5.0 integrates networking capabilities previously available only in the AppleShare IIGS® Workstation Software.

This package contains:

• Apple IIGS System Disk Version 5.0
• Apple IIGS System Tools Disk Version 5.0
• AppleShare Apple II Setup disk*
• *Apple IIGS System Software User's Guide*
• *AppleTalk Network User's Guide*

* When installed on an AppleShare file server, this software allows Apple IIGS workstation users to start up from the server.
