

Apple Centres

Spring Centalogue 1999

Spoilt for choice!
See inside for great new products
and fabulous offers.

There are some great reasons to drop in at your AppleCentre this month. Test your trivia knowledge with our Austin Powers Operation Trivia competition and you could win some groovy prizes (baby!) including a Power Macintosh G3 and Apple Studio Display 17".

But the fun doesn't stop there. When you test drive and buy a Mac in-store, you'll be in the running for the ultimate Mac-lovers experience - a trip to MacWorld San Francisco.

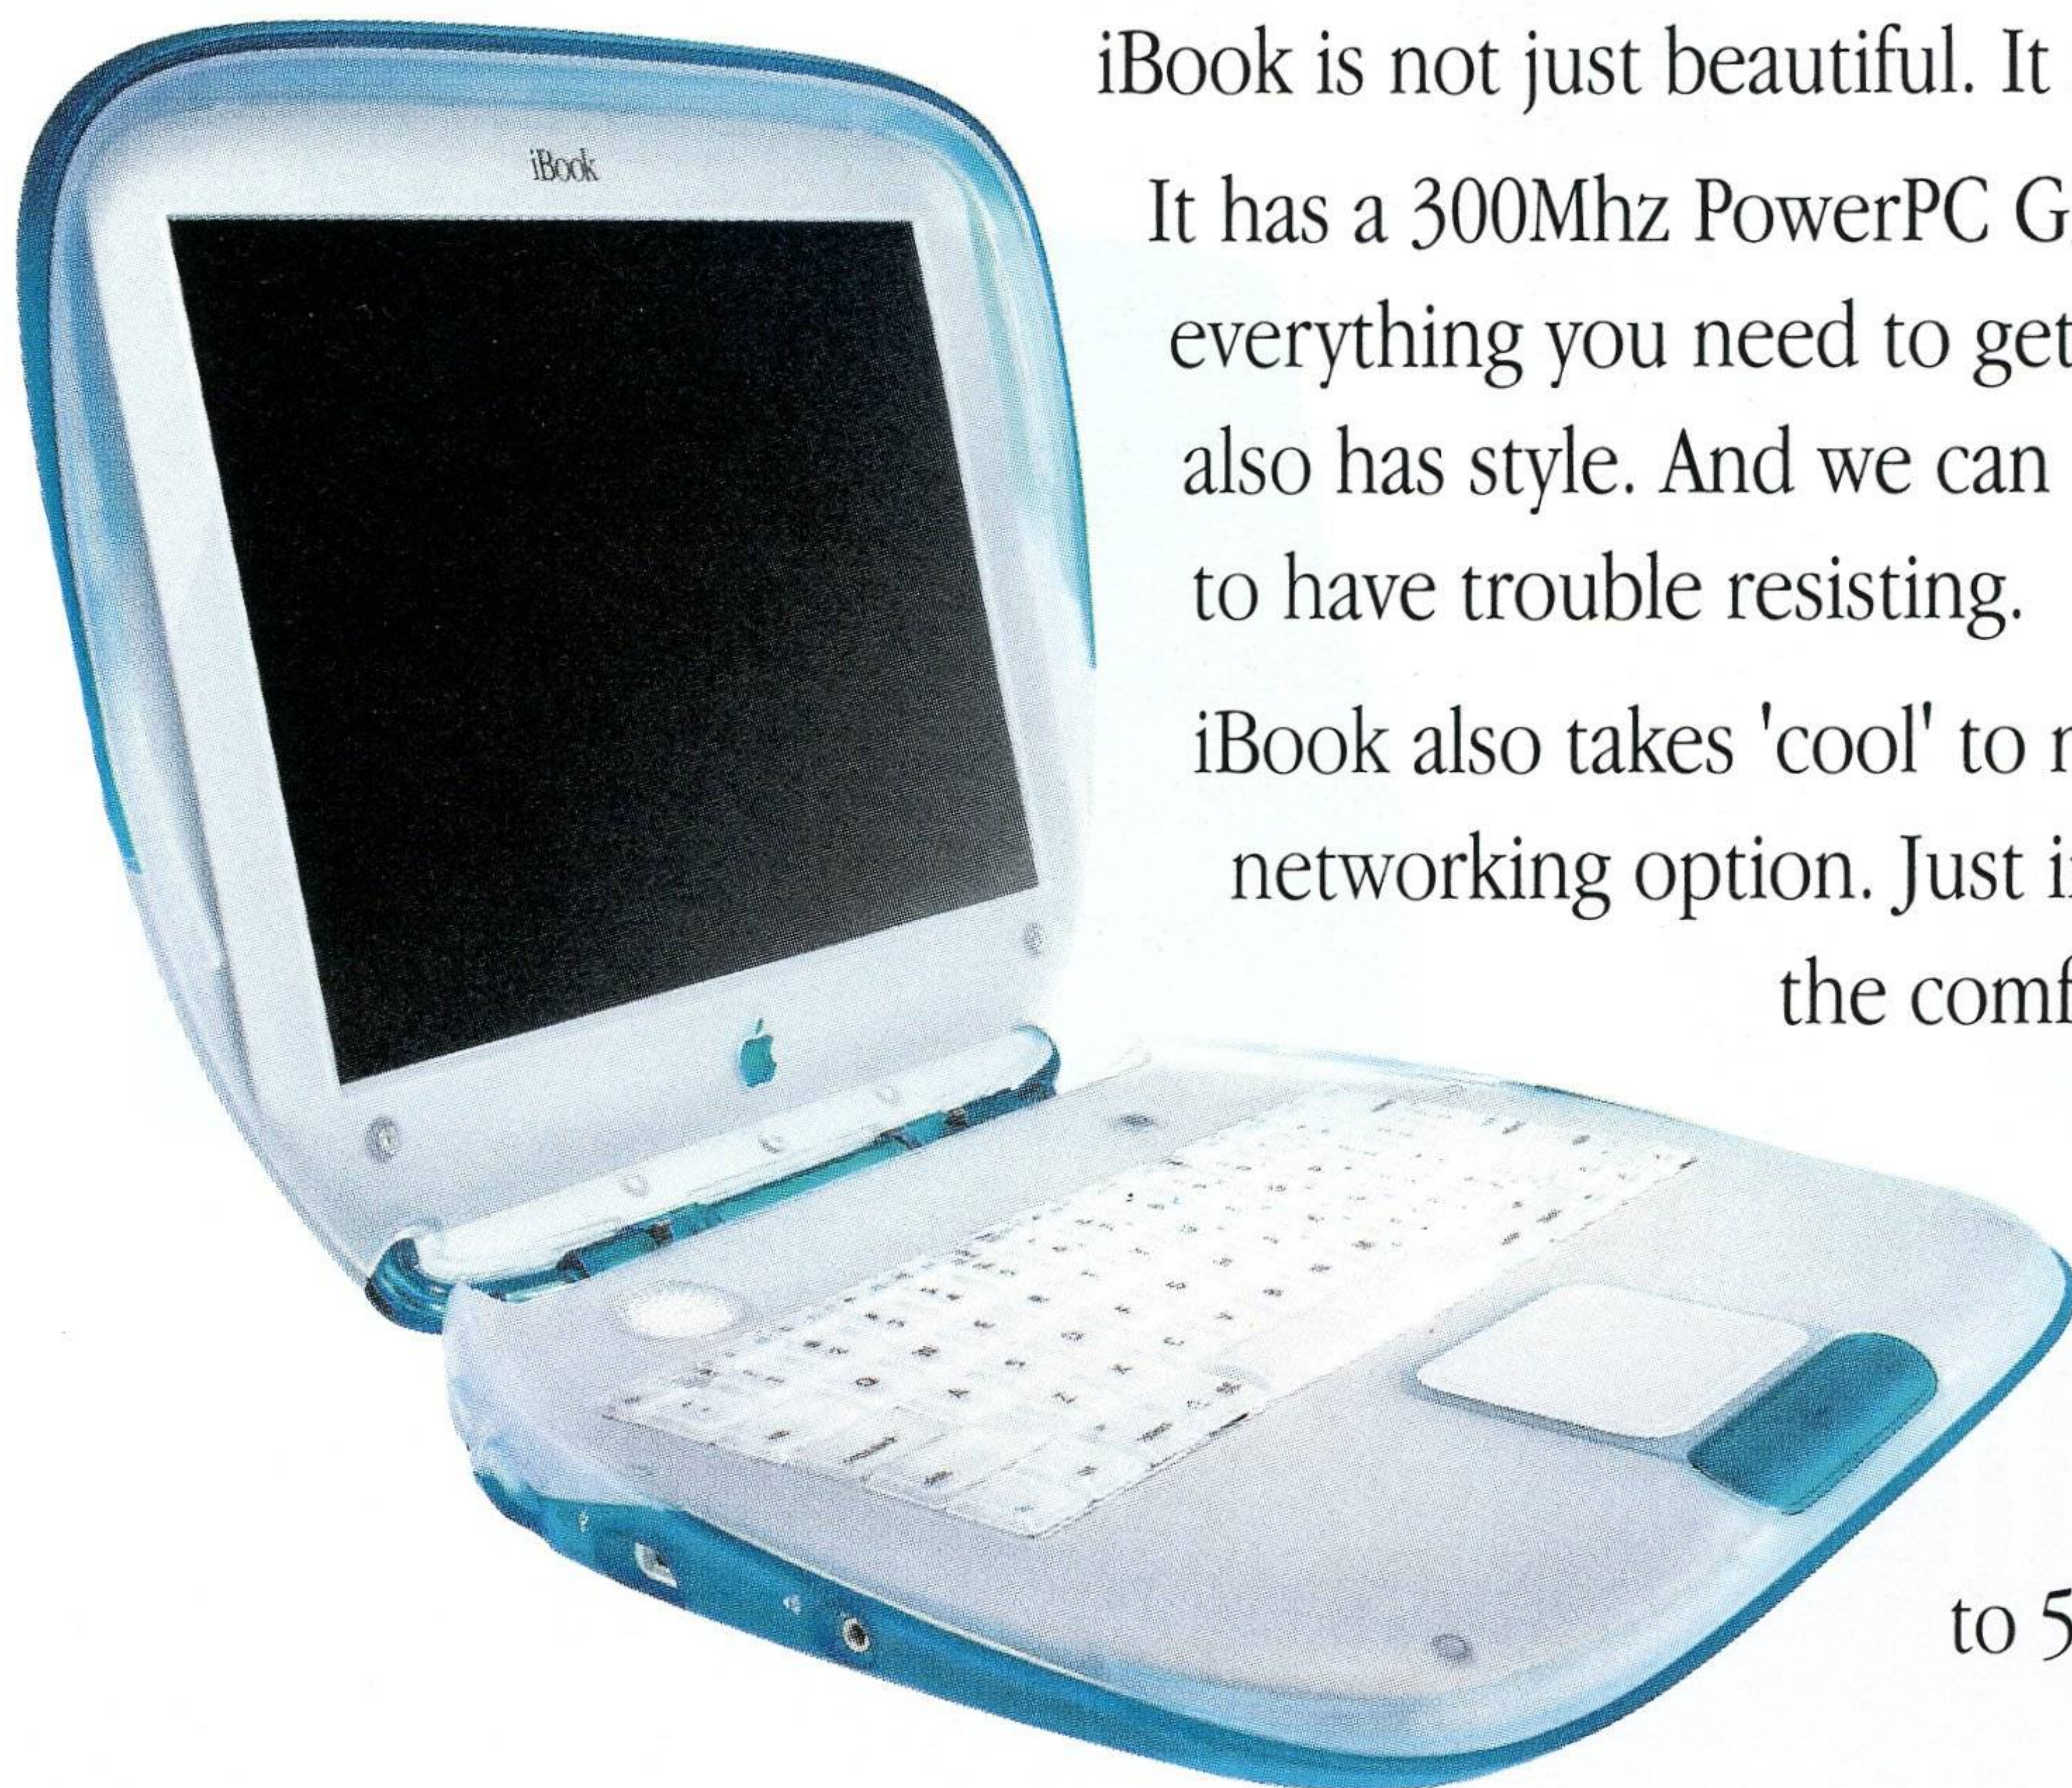

Of course while your visiting the AppleCentre be sure to ask about our great new iBook - iMac to go. It's not available until October, however once you have seen it and heard about the incredibly fast performance, along with some great new technologies, you will fall in love and order on the spot.

iBook is not just beautiful. It is powerful.

It has a 300Mhz PowerPC G3 processor, 3.1GB of RAM and everything you need to get straight onto the Internet, it also has style. And we can tell you first-hand, you're going to have trouble resisting.

iBook also takes 'cool' to new levels with its wireless networking option. Just imagine surfing the Internet from the comfort of your armchair or even

your bed. All you have to do is connect an AirPort Base Station to your phone line and power supply and you can be online up to 50 metres away.

AppleCentre

Win an incredible Apple Power Macintosh G3 computer with 17" Apple Studio Display, cool software and fab prizes valued at over \$9,000 in our totally psychedelic Austin Powers competition. **TOTAL PRIZES WORTH OVER \$30,000!**

Where in the world is the electric, psychedelic pussy cat swingers club? Would Austin Powers wear satin boxers with the Union Jack on them? If these kind of questions are your bag, then far out, baby! Because you could be flying into Sydney as a finalist in our fab Austin Powers Operation: Trivia Competition to be held at Planet Hollywood, judged by Ryan Clark (Sam) and Zac Drayson (Will) from 'Home & Away'!

How to enter

- 1 Call 133 MAC (133 622) for the location of your nearest AppleCentre today. Ring and make a time to play the Austin Powers Trivia game between August 2 and September 3, 1999.
- 2 Play the Austin Powers Operation: Trivia Game a maximum of two times at the AppleCentre, under the supervision of an AppleCentre staff member, and record your two scores on the entry form. Have the AppleCentre supervising staff member sign your entry form.
- 3 Complete your details and answer the two questions on the entry form.
- 4 Drop your completed entry form into the Austin Powers Competition Box at the AppleCentre by September 3, 1999.

The answers to the questions on the highest scoring entries will be judged and the three best answers will be chosen as finalists from each age category. Judges' decision is final. Age categories are 8-15 years and 16 plus years. The three finalists from each age category will be eligible to enter the Austin Powers Final Challenge on September 25 1999 at Planet Hollywood in Sydney. If any finalist lives more than 350 kilometres outside the Sydney CBD, Apple will provide them with a return airfare to Sydney from any major city or town within Australia and one night's accommodation in Sydney. If any finalist is under 18 years of age, a flight will also be awarded to a guardian of that finalist. The guardian must be over 18 years of age.

The achiever of the highest score in each age category at the Austin Powers Final Challenge will be an ultimate winner and will receive an Apple Power Macintosh G3 computer, a 17" Apple Studio Display, Roadshow Interactive software to a value of \$1,000, Unimouse, mousepad, games pad, Bad Boy or Bad Girl clothing to a value of over \$600, Apple shirts, bag, caps, posters and a watch.

Take the Entry Form with you to your nearest AppleCentre when you compete, baby!

PowerBook G3

The PowerBook G3 (it's stylish with a capital S) is now more affordable than ever. Which means you can stop dreaming of exponential improvements in your productivity. You can stop dreaming of possessing all that Pentium-crushing power and gorgeous 14.1" screen. Because you'll be holding the ultimate in your acquisitive little hands.

Power Books

PB G3/333/64/4G/20xCD/56k 14.1"TFT \$4,995.00

PB G3/400/64/6G/DVD/56k 14.1"TFT \$6,995.00

iBook

Why settle for stay-at-home computing when you can get the iMac to go?

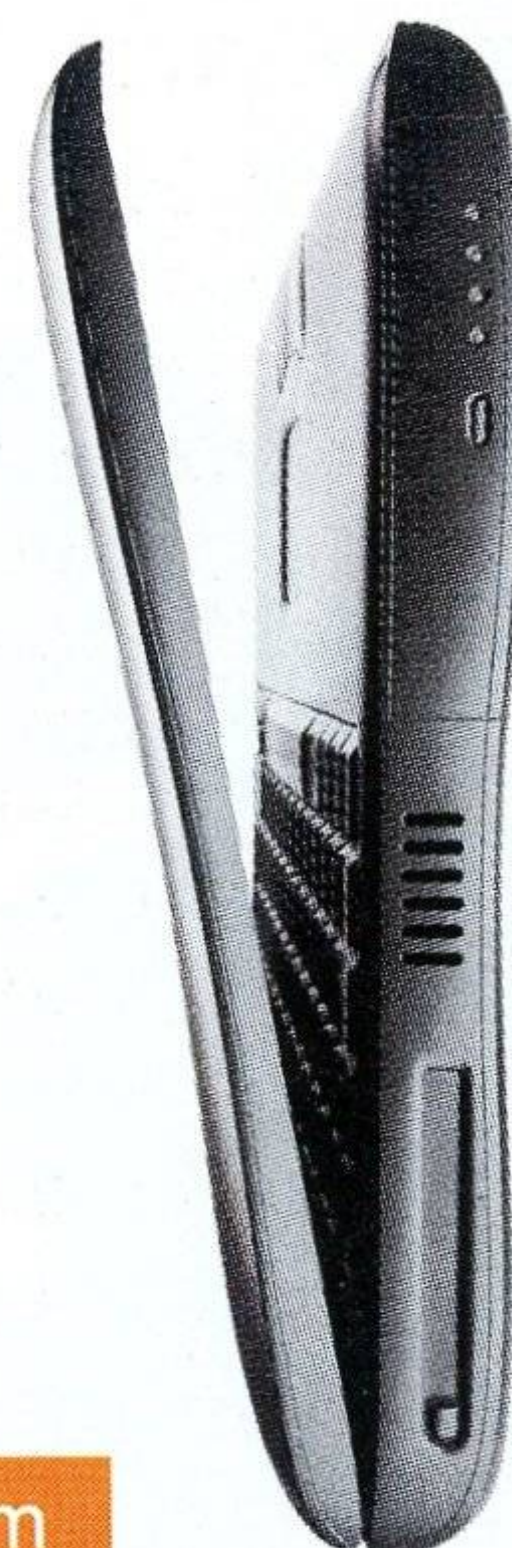

Introducing the iBook. It's the notebook computer with easy access to the Internet, a choice of two colours, tons of bundled software, and a personality.

You know how important they say it is to be a well-rounded person? The iBook was designed to be a well-rounded notebook computer. Smoothly rounded edges that fit the curve of your hands, pleasing textures, a brilliant 12.1-inch high-resolution active-matrix display, and a convenient carrying handle that folds away out of sight are among the many thoughtful touches you'll appreciate about the iBook. And with a 56K modem, a 10/100BASE-T Ethernet port, Mac OS 8.6 and all the right software already installed, it's as Internet-ready as a notebook computer can be.

iBook is expected to arrive in Australia in October. But to be one of the first to own one, be sure to order through your AppleCentre now!

iBook G3/300 32/3.1GB/CD \$3,295.00

*Approval for this device from the appropriate regulatory authorities is pending.

G3 Minitower/Server*

The fastest, most powerful - and most expandable Mac ever made. Fast enough to handle the toughest video and publishing applications with ease. Smart enough to grow with your needs for years to come. Stylish enough to make your computer time more enjoyable than ever. With the new Power Macintosh G3 computers, all these features are yours in one great system, at remarkably low prices. With its sleek, industrial design, Pentium-crushing power, built-in Ethernet and ultrafast FireWire, the new Power Macintosh G3 is utterly unprecedented.

Power Macintosh CPUs*

- PM G3 350MHz/64MB/6GB/CD/1MB Cache \$3,295.00
- PM G3 400MHz/64MB/6GB/DVD/1MB Cache \$4,295.00
- PM G3 400MHz/128MB/12GB/CD/Zip/1MB Cache \$5,295.00
- PM G3 450MHz/128MB/9GB U2/CD/1MB Cache \$6,295.00

Work Group Servers*

- MS G3/400MHz/128/1X9GB U2SCSI/CD/ASIP \$ 6,995.00
- MS G3/450MHz/256/2X9GB U2SCSI/CD/ASIP \$10,295.00
- MS G3/450MHz/256/2X9GB U2SCSI/CD/OSX \$10,295.00

*CPU and keyboard only. Monitor sold separately.

Apple Studio Displays

The 21, 17, and 15-inch Apple Studio Displays complement the new Power Macintosh G3 in both appearance and performance, creating a totally integrated system. Just sitting on the desk, they're stunning. Turn them on, and they're equally easy on the eyes. Advanced screen technology means images are brighter and crisper, colours more vivid, and text sharper and easier to read.

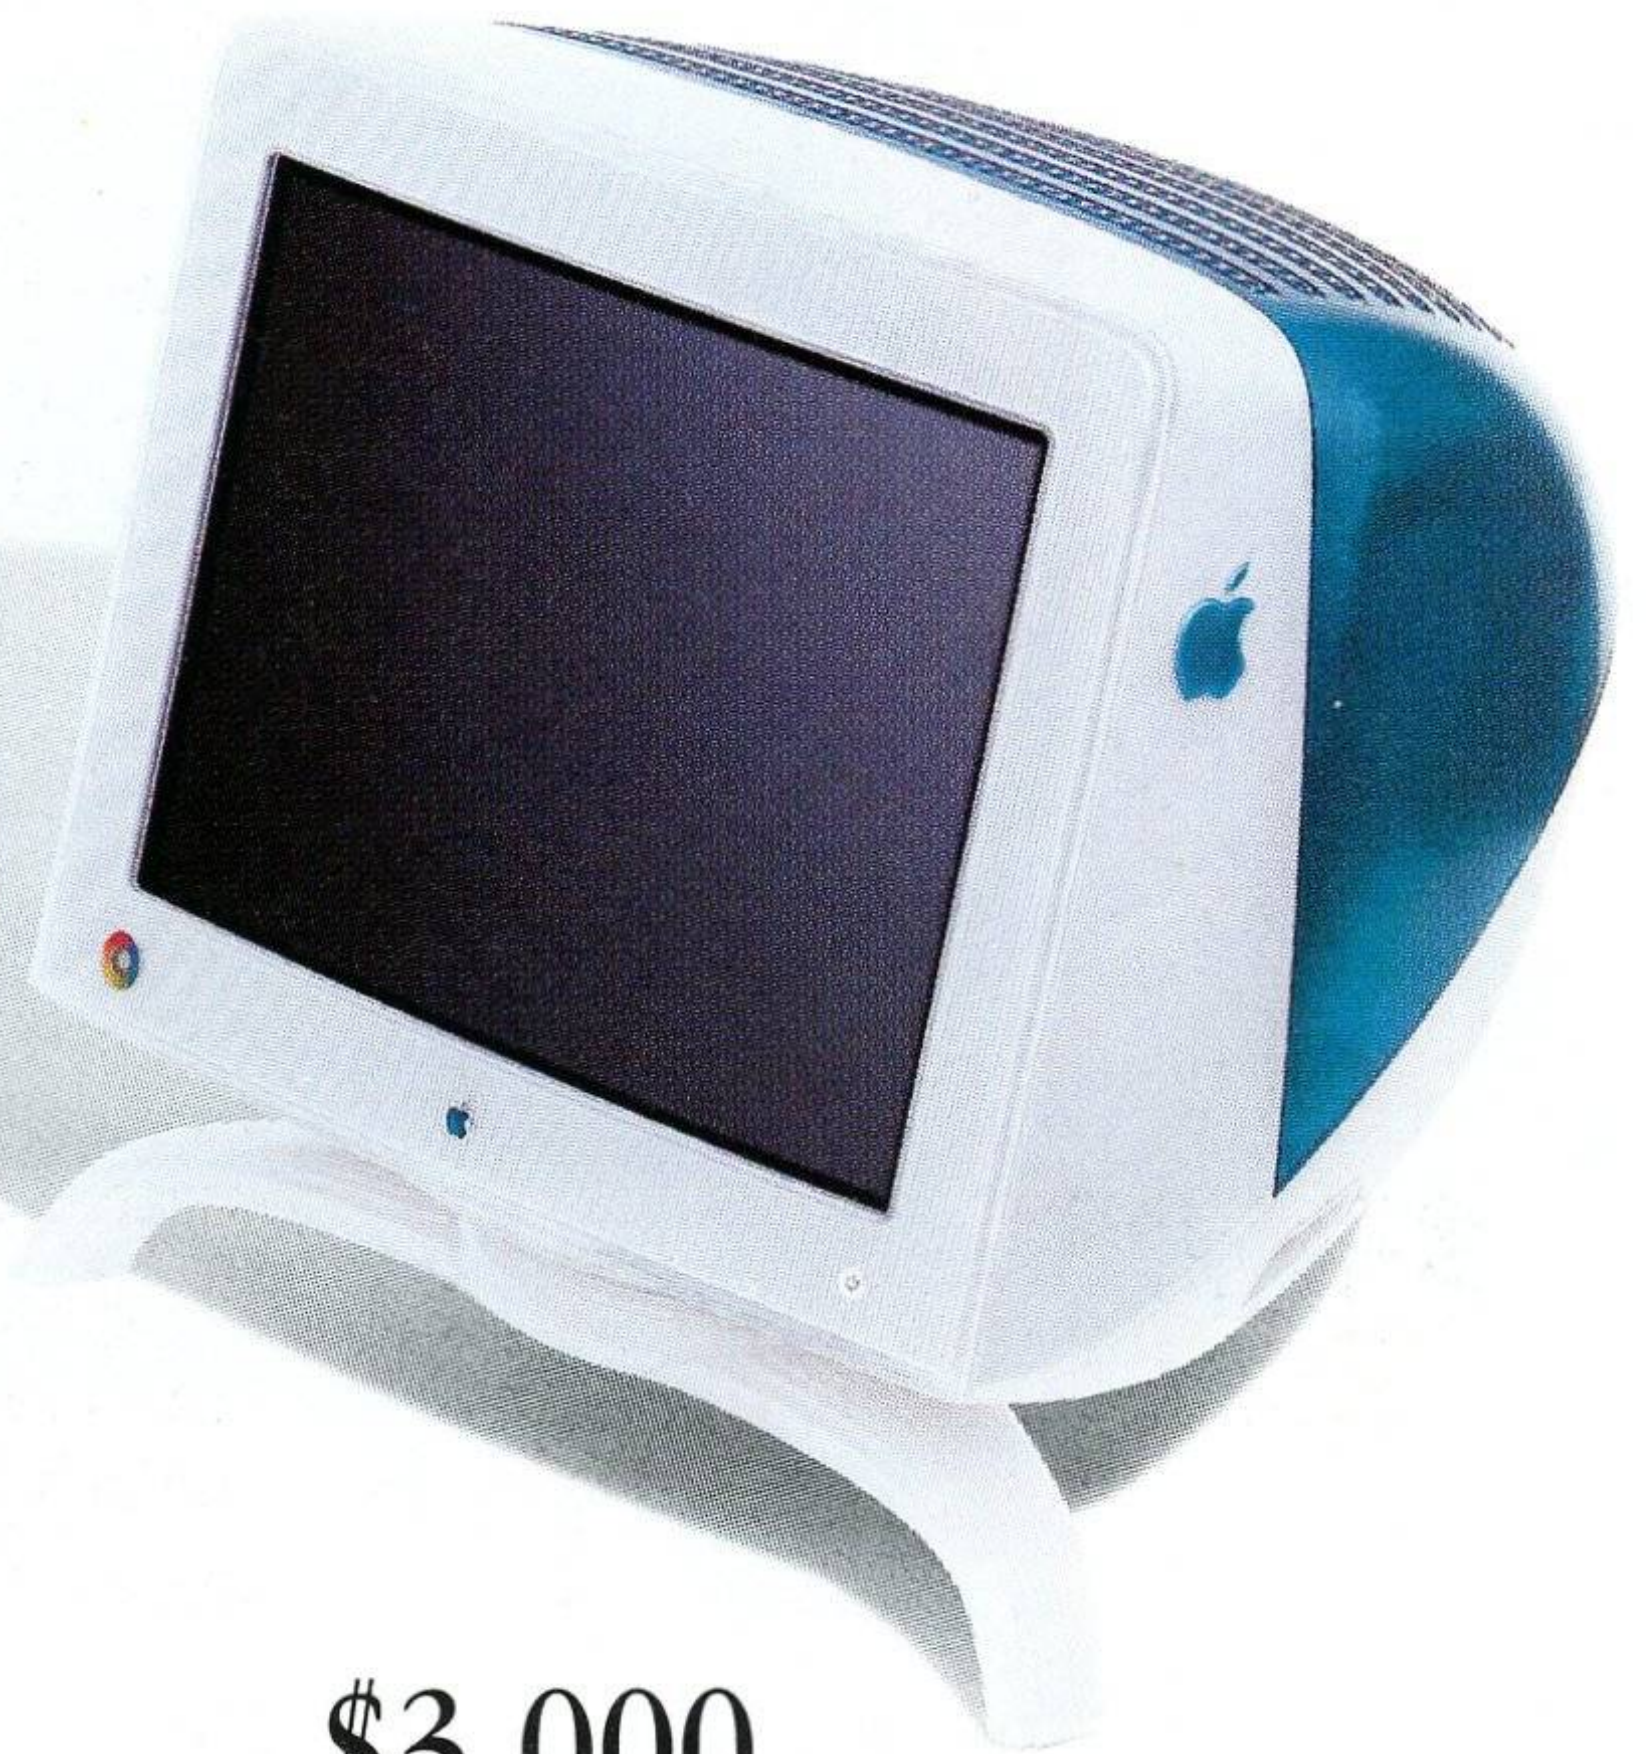

- Apple Studio Display 17" (16" viewable) \$1,000.00
- Apple Studio Display 21" (19.8" viewable) \$3,000.00

iMac

iMac is now one of the world's best-selling personal computers. Any wonder. Take iMac out of the box, and around ten minutes later you can be surfing the Internet in a wave of colour. iMac now comes in blueberry, grape, tangerine, strawberry, and lime - at a very affordable price.

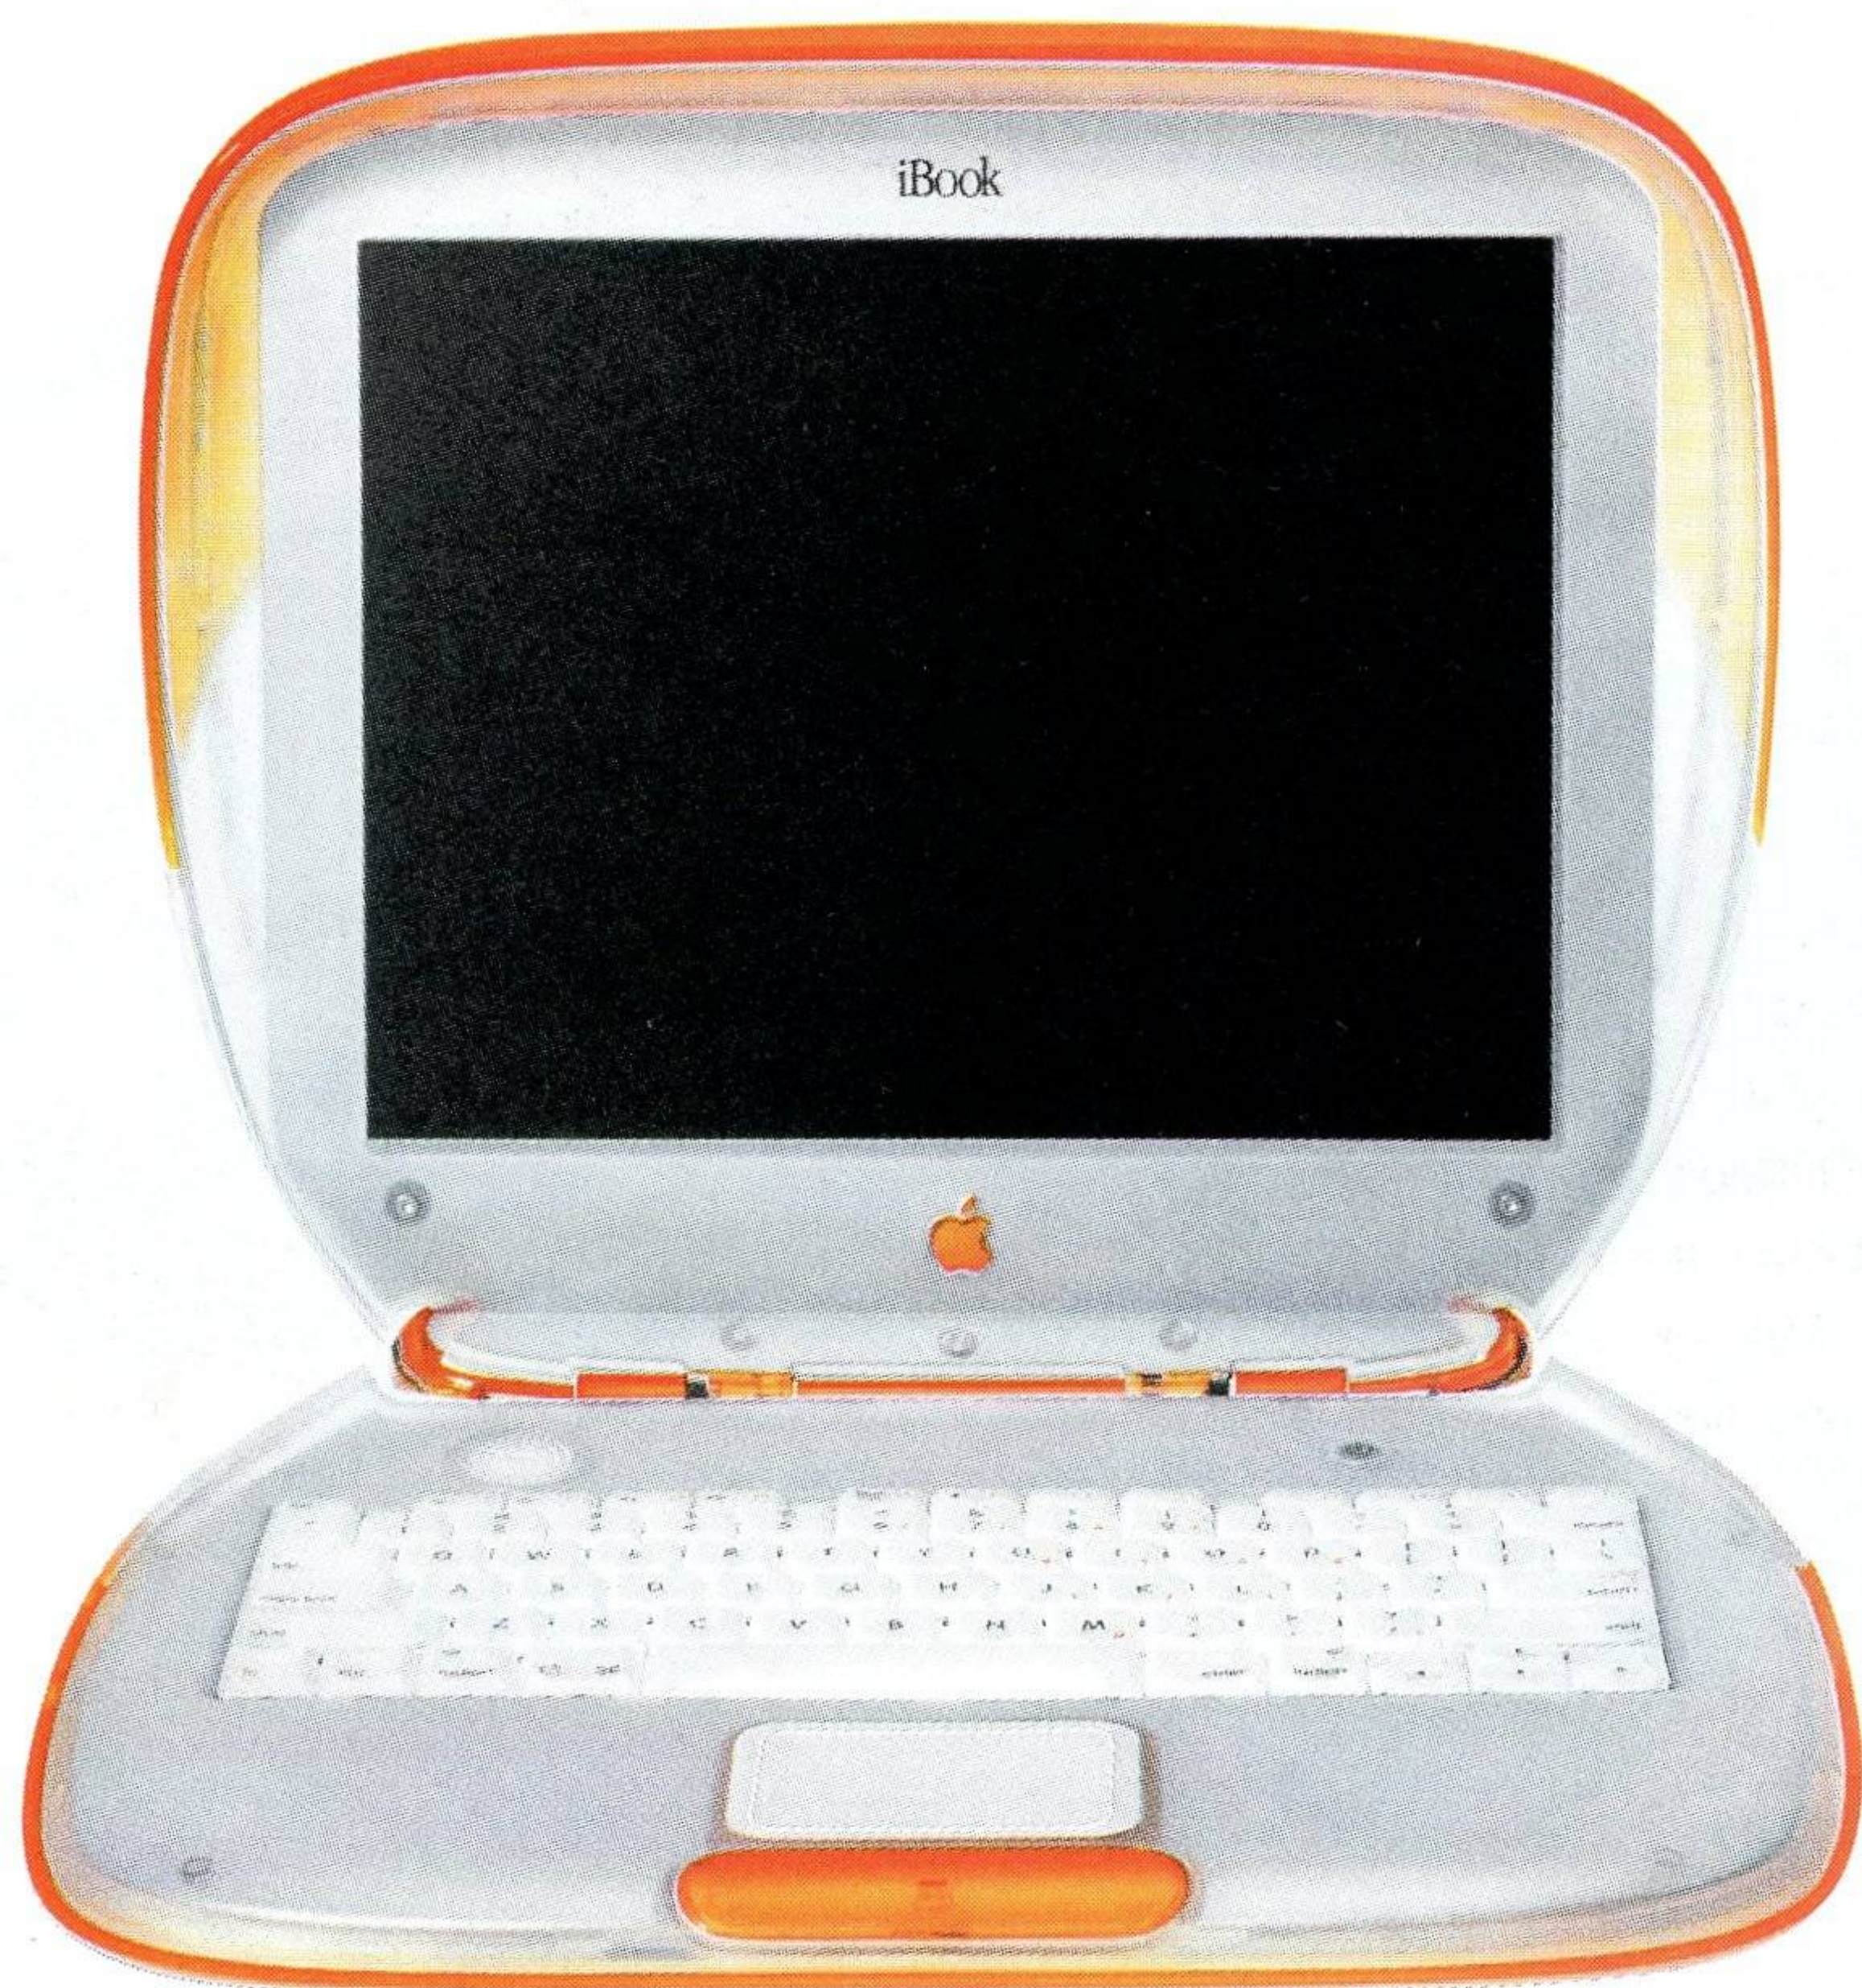

The fruity iMacs include an even faster 333MHz PowerPC G3 processor and 32MB SDRAM. They also feature a massive 6GB hard disk drive, 24x CD-ROM drive, built-in 56K modem, 10/100Base-Tx Ethernet, two built-in 12Mbps Universal Serial Bus ports and more - plus Mac OS and a selection of useful software including AppleWorks, WorldBook and Adobe PageMill.

Check out where your local AppleCentre is on page 47. Call them for the latest pricing.

Unless otherwise indicated all prices are recommended retail prices at the time of going to print. Flexirent prices are based on 36 month term. See page 23 for more details.

8 introducing iBook*

Why settle for stay-at-home computing when you can get the iMac to go?

Introducing the iBook. It's the notebook computer with easy access to the Internet, a choice of two colors, tons of bundled software, and a personality.

It's no Square

You know how important they say it is to be a well-rounded person? The iBook was designed to be a well-rounded notebook computer. Smoothly rounded edges that fit the curve of your hands, pleasing textures, a brilliant 12.1-inch high-resolution active-matrix display, and a convenient carrying handle that folds away out of sight are among the many thoughtful touches you'll appreciate about the iBook.

And with a 56K modem, 10/100BASE-T Ethernet port, Mac OS 8.6 and all the right software already installed, it's as Internet-ready as a notebook computer can be.

The Beauty and the Beast

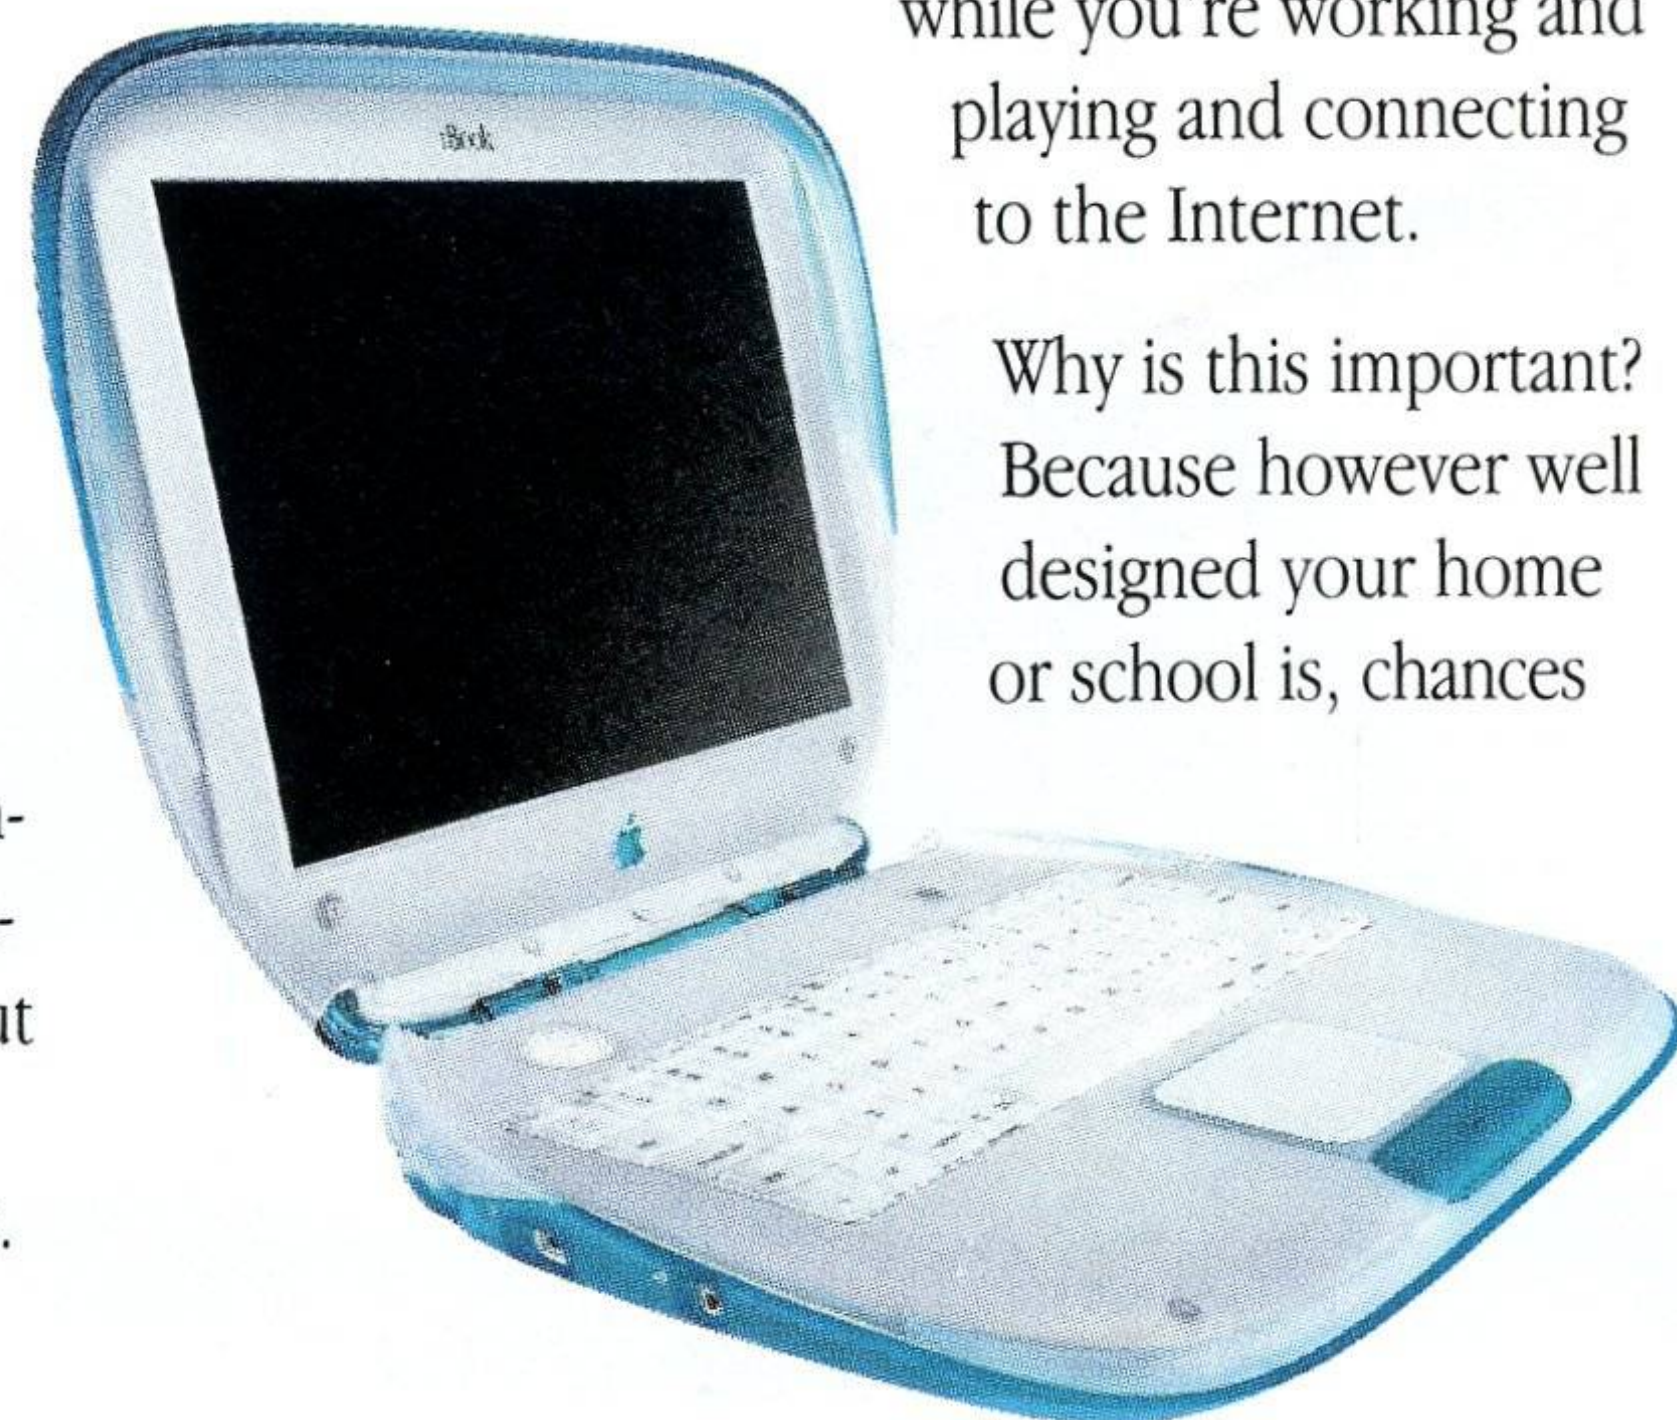

But while you'll love the way the iBook looks and feels and connects to the Internet, you'll learn to respect the beast within. Because the iBook is powered by a blazingly fast 300MHz PowerPC G3 processor—great for surfing the Internet, whipping out homework assignments, sending and receiving email, or beating the daylights out of friends at multiplayer games.

The iBook is made for computing on the move: it comes with a lithium-ion battery that runs up to six hours between charges. The iBook has a tough polycarbonate body built to withstand life in a backpack—and no doors or latches to break.

Say goodbye to network cables

The iBook also offers a very important benefit not generally associated with computers—the freedom to move around while you're working and playing and connecting to the Internet.

Why is this important? Because however well designed your home or school is, chances

*Approval for this device from the appropriate regulatory authorities is pending. The device is expected to be released in Asia Pacific in October 1999.

<http://www.apple.com/guide>

are your wall sockets are in the wrong place, or in not enough of the right places to be really convenient.

Unplugged

Only now it doesn't matter, because the iBook offers a very affordable option that gets you around this obstacle. It's called AirPort, and it lets you use your iBook from your couch—or the garage, or the sundeck, or a tree-house, or anywhere else you make yourself comfortable—up to 50 metres from an easy-to-install AirPort hardware access point. Because you don't have all your fun sitting down in one place. You shouldn't have to do all your computing sitting down in one place, either.

The iBook is a hot little number in terms of performance, connectivity, multimedia and storage capacity. For starters, the 300MHz PowerPC G3 chip inside the iBook aced the Pentium II in the BYTEmark integer tests. And as for connecting to the Internet, the iBook lets you get online three different ways: through its built-in 56K modem or 10/100BASE-T Ethernet port, or—if you prefer—wirelessly. Have lots of stuff you'd like

to save? No problemo. The iBook has lots of space: a 3.1-gigabyte hard disk drive lets you store reams of digital data. Like to watch movies? The iBook features QuickTime 4, the technology that allows millions of moviegoers to conveniently check out the trailers for new releases.

Cool Software** which comes with your iBook

- Mac OS 8.6

welcome to our AirPort

*We developed the AirPort
so you can really take off.*

Internet here, there and everywhere

AirPort is a new technology that brings the Internet to every room in your house, or every desk in your classroom—and about time, too, you're probably thinking. Because however well designed your home or classroom is, chances are you keep running into the same problem—your phone jacks are in inconvenient or hard-to-reach spots that were never originally intended to accommodate computers. The result? You're obliged to use your computer wherever your phone sockets or Ethernet ports happen to be, or deal with cables snaking all over the place.

Well, not anymore: AirPort gives you the freedom to access the Internet with your iBook from anywhere in your home or classroom.

Hold the wiring!

The more wired you are, the less wires you need. You need just three things to have AirPort up and running. First, you need to get your hands on an iBook (you'll notice how it has antennas already built into the plastics so there's nothing to lose or break off). Second, you'll need the AirPort Card (you'll have it installed in your iBook in seconds). Third, you'll need the AirPort Base Station (it's similar to the base station of your cordless telephone, and includes a 56K modem for

your phone line, or an Ethernet port if you have access to an Ethernet network). And that's it. Hold the wiring.

AirPort is a powerhouse in the performance department. It lets you use your iBook up to 50 metres away from the hardware access point, and the wireless data rate is up to 11 megabits per second.

One Connection, All online together

AirPort lets everyone travel at the same time. The AirPort Base Station really comes into its own when you have just one Internet account and everyone wants to get online simultaneously: it lets you share a single Internet connection among the iBooks in your home. Just think of the different places you could be online at the same time — travelling halfway round the world from the comfort of your couch or deck or patio.

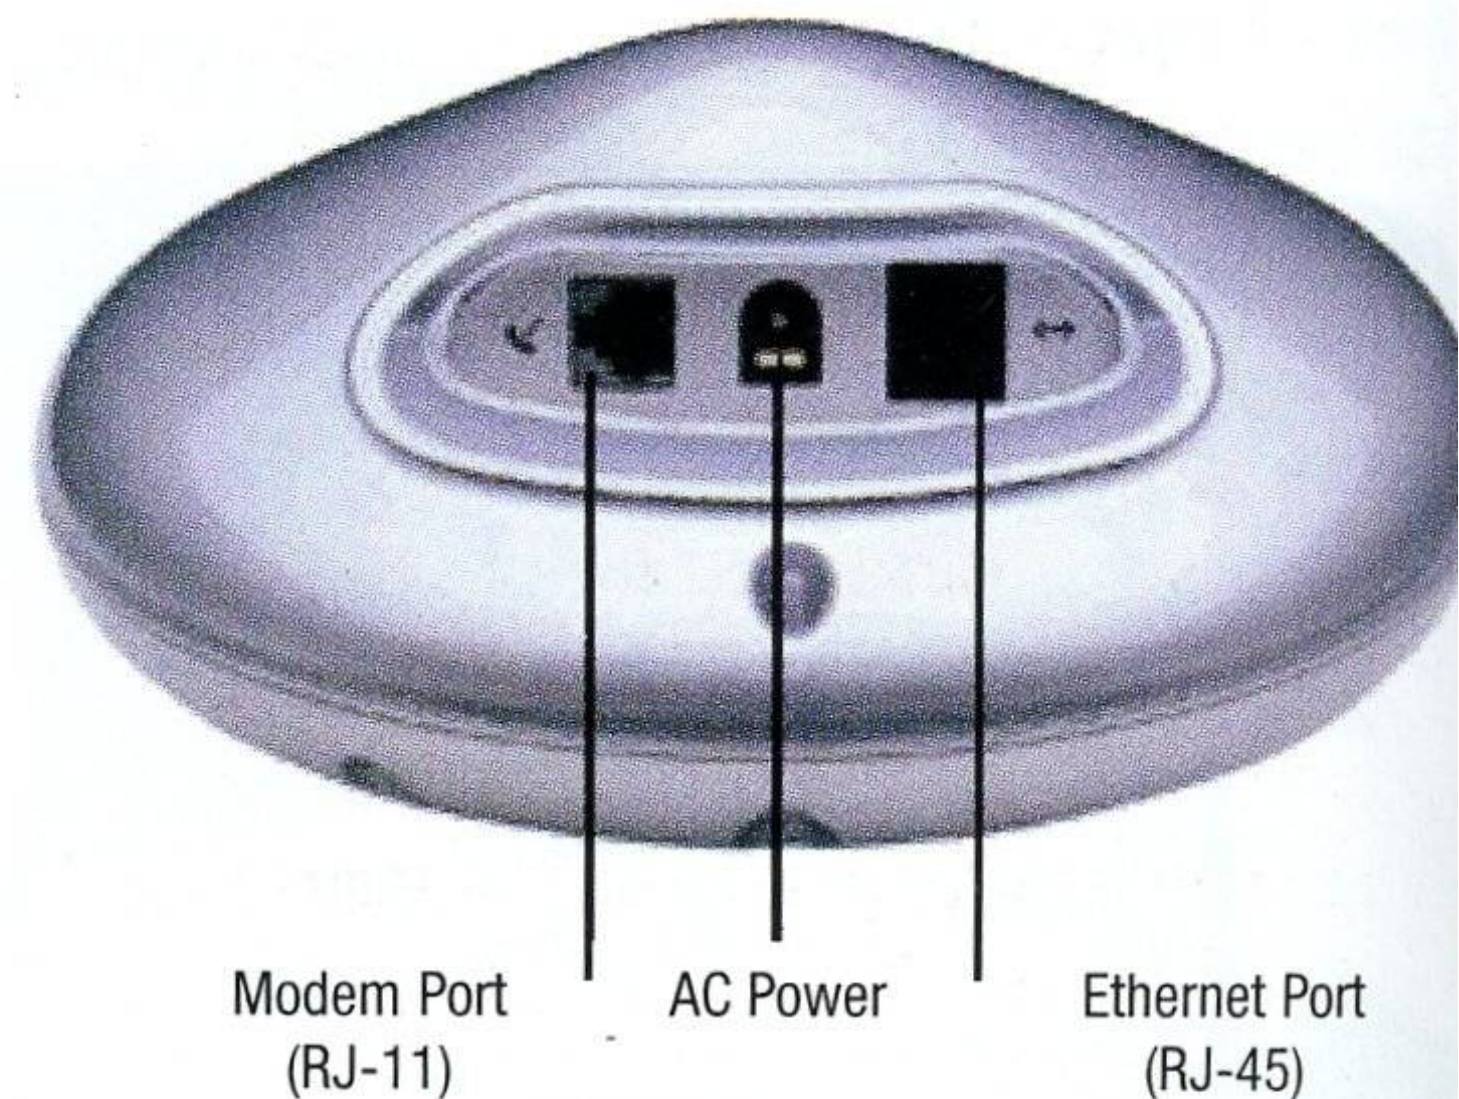

Upstairs, Downstairs, Room to Room

Send email through a solid brick wall. You can do it from any room in your house. Ditto with file transfers to a second iBook with AirPort. Now picture the possibilities for using your wireless iBook to enjoy multi player games: not only can you play with family members using their wirelessly-enabled iBooks around your house, you can also whip the stuffing out of the kids across the street.

Simple Setup

Getting started is simple. The set-up assistant guides you through a few simple steps, and you'll speed through everything from the easy configuration to the intuitive software interface. And pretty soon you'll be telling your friends that for wireless surfing from any room in your house, an AirPort-equipped iBook is just the ticket.

AirPort is expected to land in Australia in October. Ask your AppleCentre for details.

AirPort Base Station

*Approval for this device from the appropriate regulatory authorities is pending. The device is expected to be released in Asia Pacific in October 1999.

Getting started with QuickTime 4

Apple Premieres QuickTime TV

QuickTime 4

There's no time like the present to get started—just download the free* QuickTime Player and take charge of your online entertainment. Because QuickTime technology isn't about some far-off future. With QuickTime 4, the future is now.

In addition to the traditional controls you'd expect to find on a television—like volume controls, pause and play buttons—the QuickTime Player gives you enhanced controls for online movie playback

Play Favourites

You have two ways to store the movies you want to watch again and again: stash them in the Favorites Drawer, or opt for what may be the ultimate storage solution — let someone else handle it. In fact, you can store a virtual video library on other people's hard disks. The secret? Bookmarks. A user in Zimbabwe, for instance, can bookmark movies, audio and related QuickTime files stored on a server in Argentina — and access them instantly, at will. Just one of the many neat things you can do with QuickTime.

At MacWorld in July Apple introduced QuickTime TV (QTV), the Internet's highest-

quality network for web-based video and audio. QTV seamlessly integrates four key elements: Apple's award-winning QuickTime 4 Player software; Apple's open-source QuickTime Streaming Server software; the Apple/Akamai Technologies streamed content delivery service (see related release); and compelling content from leading providers. QTV is provided free of charge to viewers.

New "intercasters" on the QTV network include ABC News, Disney, ESPN, The Knitting Factory, RollingStone.com, VH1 and Virgin Radio. They join BBC WORLD, Bloomberg, FOX News Online, FOX Sports Online, HBO, NPR, WGBH Boston and The Weather Channel.

"QuickTime TV is the first killer network on the Internet," said Steve Jobs, Apple's interim CEO. "Viewers are going to experience high quality video and audio over the Internet for the first time."

"Disney is committed to providing our users a true rich media experience on the Internet," said Larry Shapiro, executive vice president, Business Development and Operations, Disney's Buena Vista Internet Group. "QTV provides a superb choice for customers, delivering the audio and video content they want through technology of the highest quality."

"To continue to advance the Internet's music revolution, consumers must have access to technology that is easy-to-use and can deliver high quality audio and video," said Howard A. Tullman, chairman and CEO of Tunes.com, creator of RollingStone.com. "Apple has always been an innovator in these areas and we are excited to be a featured content provider on QTV."

Macintosh and Windows users can view QTV's diverse content via Apple's state-of-the-art QuickTime 4 Player, which provides one-click access to users' favorite QTV channels as well as the ability to bookmark content from anywhere on the Internet. The QuickTime Player is available as a free download from www.apple.com/quicktime

Photographer snaps up iMac

Bruce Usher is a professional photographer, used to making sure other people's images are just right. Now he's got a new look with the introduction of a stylish grape iMac.

"I just couldn't see myself with a plain old computer," Bruce comments. "As a surfer, there was only one choice of colour. It just had to be the grape. It reminds me of the deepest ocean. I love it. It fits right in with my office and my lifestyle."

"I use the iMac to run all aspects of my business from accounting to invoicing as well as e-mails and of course, surfing the Internet."

"I've also added a zip disk to carry large files around. It means I can get photographs scanned and then experiment with retouching them using Adobe Photoshop.

"Since I've had the iMac I've become a lot more confident about computing and now I'm thinking about setting up my own website. I'd like to start out with a promotional homepage and maybe down the track I could start selling some of my photographs over the Internet. I have an enormous collection going back 30 years and I think the iMac can offer me an opportunity to do something with them "

When Bruce isn't using the computer, his two sons love to surf the Internet, catch up with their friends on chat lines and e-mail and play action games.

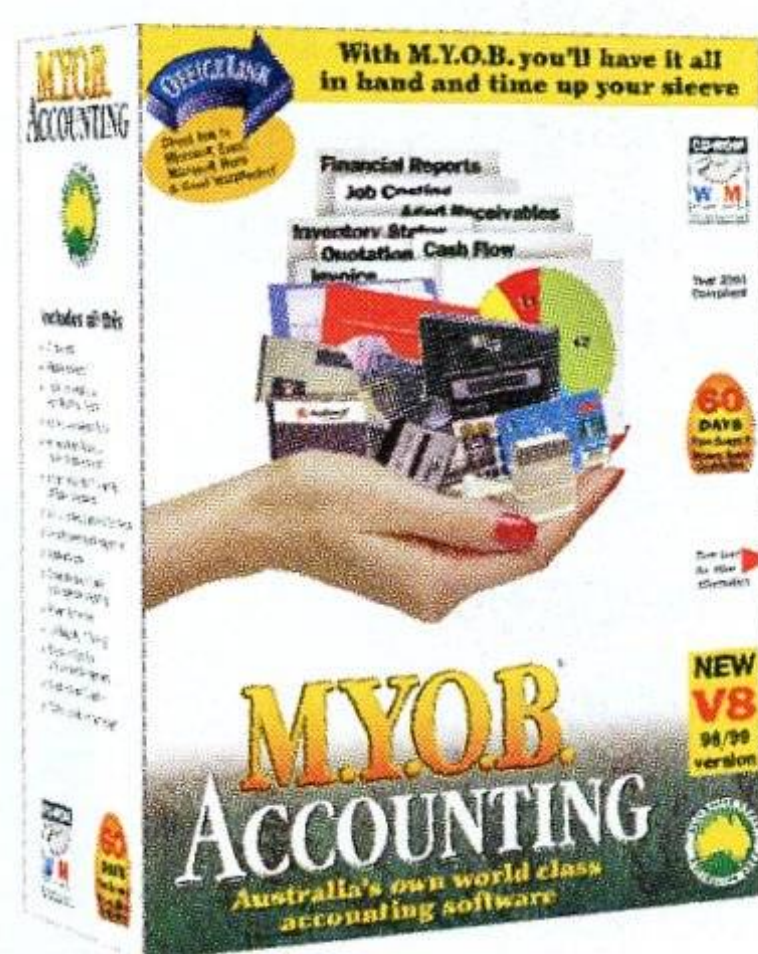

"The iMac is very fast and has cool graphics," comments Michael Usher (13). It comes with a game called Nanosaur which I get into."

Sharing the iMac is a bit of an issue, but Bruce gets first call if it's for business. "Otherwise it's open season," he says.

1 Winnie the Pooh and the Honey Tree Animated Story Book
Sing along with their favourite songs, or help Pooh find his next pot of honey.

Timon & Pumbaa's Game Break
Five wild games of speed, skill and indigestion!

2 Math Quest with Aladdin
Skills include Addition, Subtraction, Estimation, Sorting & Classifying, Mental Computation, Logical Reasoning, Problem Solving and Geometry.

Reading Quest with Aladdin
Integrates 12 reading activities; teaching phonics, vocabulary and reading comprehension characters from Aladdin.

3 Ready for Math with Pooh
Seven fun activities that teach number recognition, sequential counting, beginning addition and subtraction, patterns, and more! Three levels of difficulty let children of different ages learn at their own pace.

Ready to Read with Pooh
Nine challenging activities that stimulate imagination as they teach and reinforce critical skills. Alphabet and spelling, phonics and rhyming.

4 Adventures in Typing with Timon & Pumbaa
A fantastic learning program that combines skill-building typing lessons with action-packed game play. Disney favourites Timon and Pumbaa accompany kids 6 and up on a wild and entertaining adventure. Five typing activities progress users from basic to more advanced skills.

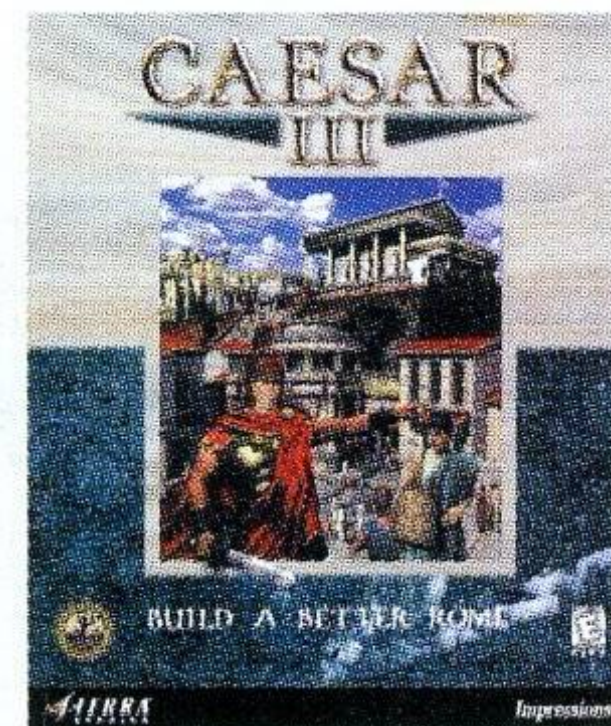

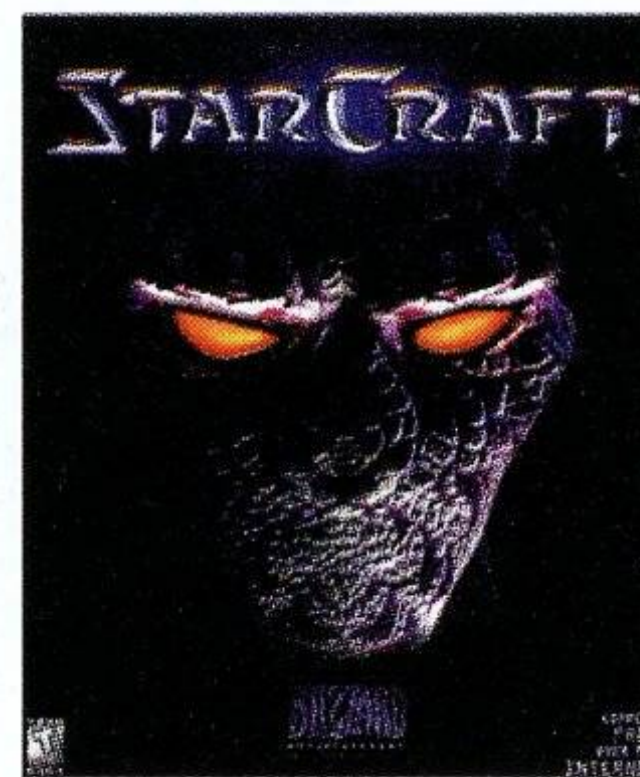

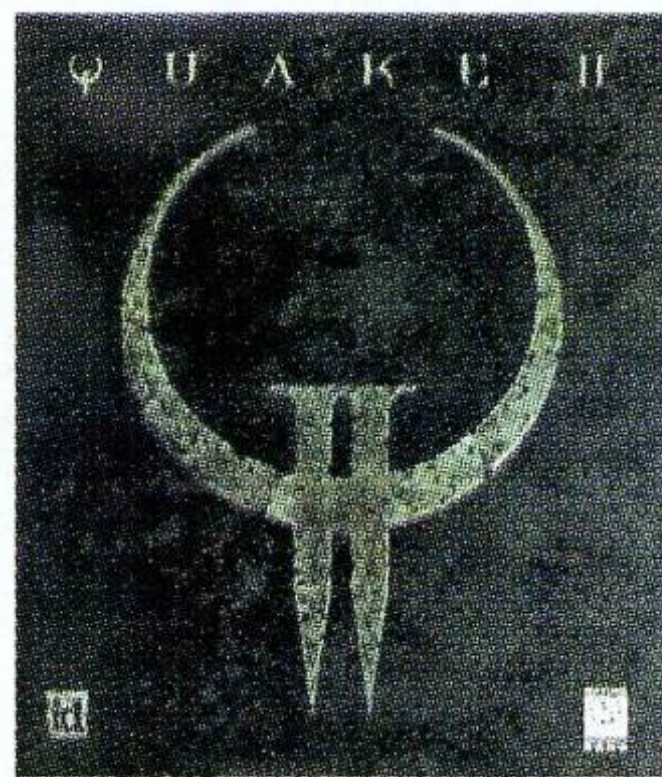

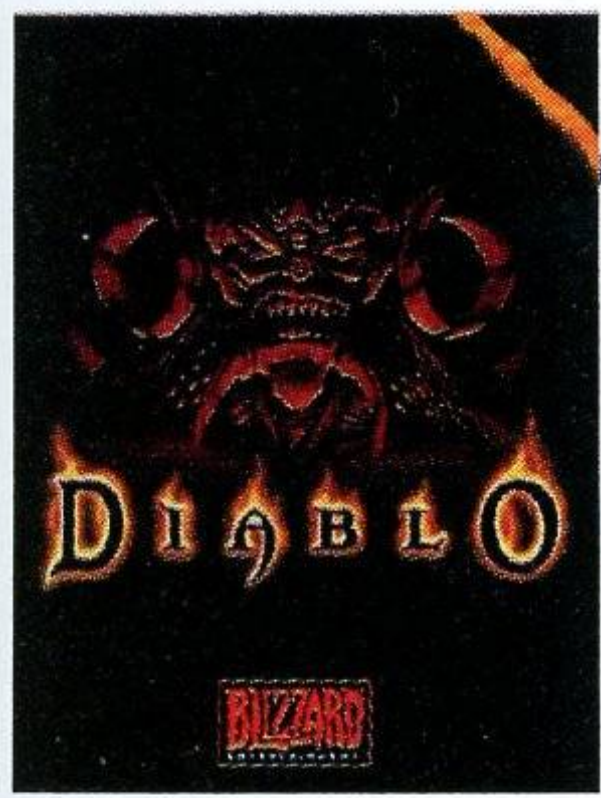

5 Typing Tutor Platinum
Type quickly and more accurately with the revolutionary Conceptual Effects Typing Method (CETM)! Studies show CETM users learn to type in 60% less time than with conventional methods. Hundreds of video clips, games and book excerpts keep learning fun!

6 Dr Brain Thinking Games Puzzle Madness
Dr Brain's clone development process had a malfunction. The result is "Conn", the malevolent clone who wants to destroy everything he sees. When Conn breaks loose you have to stop him by solving all the puzzles between you and the key to the case! You might even save the city along the way.

7 Kaplan Higher Score High School/Mathematics
Helps prepare students for university and beyond! Includes Algebra, Geometry, Vocabulary and Grammar. 60 years experience helping students study and succeed. Bonus pack with Davidsons Algebra, Geometry Blaster, Word Attack, Grammar Games and Multimedia Workshop.

High School \$79.95
Mathematics \$79.95

8 Dinosaur Adventure 3-D
Award-winning, best-selling program! Beginning in a virtual reality theme park, you set out on an action-packed journey of dinosaur discovery. Includes a Dinosaur Art Museum and an actual authentic fossil from the age of dinosaurs! With enthralling games, fun activities and comprehensive reference tools, this is a learning experience kids will never forget!

Globetrotters! The Summerfields travel the world for the price of a phone call.

Since they acquired their new blueberry iMac, the Summerfield family has become rather cosmopolitan. Debbie (Mum) has been to the Natural History Museum in England, Questacon in Canberra, the Smithsonian in Washington and the Louvre in France.

She also sends a weekly e-mail to her sister who has been posted to a remote location in Ghana, Africa, with her husband (a mining engineer). "My emails keep her sane," says Debbie.

Then there's Luke Summerfield, 12, who uses the iMac to play games like StarCraft, Civilization and Caesar. But his real passion is playing chess against opponents across the Internet.

"I have played chess against people in Darwin, Manchester in England and Boston in the USA," says Luke.

"As you play, you can communicate by writing in a chat screen. Sometimes I win and sometimes I lose, but what I like best is that there's always someone online who's willing to be challenged."

The Summerfields use their iMac to help manage the family's landscaping business, which they have run from home for the past 23 years.

"My husband, Tim, was a little timid when it came to using technology, but the iMac has made it easy for him," said Debbie.

"He's transferred all his accounts on to the iMac and is using MYOB to manage the business, pay bills and reconcile the books. He's also using the Internet to research costings for items such as paving stones, flora and turf."

The Summerfields chose an iMac because they are used by the Summerfield's three children at the local school, so not only did they already know how to use them, they could help teach Mum and Dad!

Jessica, 8, uses the iMac to write letters to her friends. She loves making, designing and printing things, so the iMac has allowed her to explore her creativity.

"I like to draw and paint and I use Kid Pix to design writing paper with stamps," she comments. "I also use the iMac to do my homework. I research assignments on the Internet, and then use AppleWorks to write up my work. And I write and print stories for my young brother Ben, age 5, who has just started using the iMac. He likes playing games like James Discovers Math and Putt Putt."

Research & Planning banks on iMac

iMac on-line banking solution saves small business time and money

Banking transaction charges are an increasing burden for many small businesses. Using on-line banking can often reduce this cost.

Sydney-based research agency Stancombe Research & Planning purchased a blueberry iMac to reduce banking costs and has since discovered the Mac's other business benefits.

Michael Combley, Stancombe Research & Planning's Director, believes that the iMac will

pay for itself in less than two years – and reduce his company's overheads.

Michael purchased an iMac, and increased the RAM to 96MB to manage on-line banking and general administration. The iMac included a powerful 333MHz PowerPC G3 processor, a 6GB hard disk drive, 24x CD-ROM drive, built-in 56K modem and many useful software titles.

Michael had also wanted a computer that was easy to set up.

"I honestly expected at least an evening of fiddling getting the thing to run. Modems, in particular, usually take a long time to get working properly. I was gobsmacked by how easily the iMac fitted into the office. The new iMac plugged simply into our 100BASE-T network and we were banking within 30 minutes," Michael said.

As well as enabling electronic banking, the new iMac has delivered additional benefits. The iMac also handles all of the company's accounting, is used for word processing and looks after internal e-mail.

Its speed has also been impressive.

The grape computer is running Stancombe Research & Planning's accounting software significantly faster than in the past. This has made daily accounting tasks, in the words of relieved Accounts Manager Helen Riddle, "a breeze".

The iMac also runs Virtual PC emulation software that enables Stancombe Research & Planning to run Windows-based applications as required.

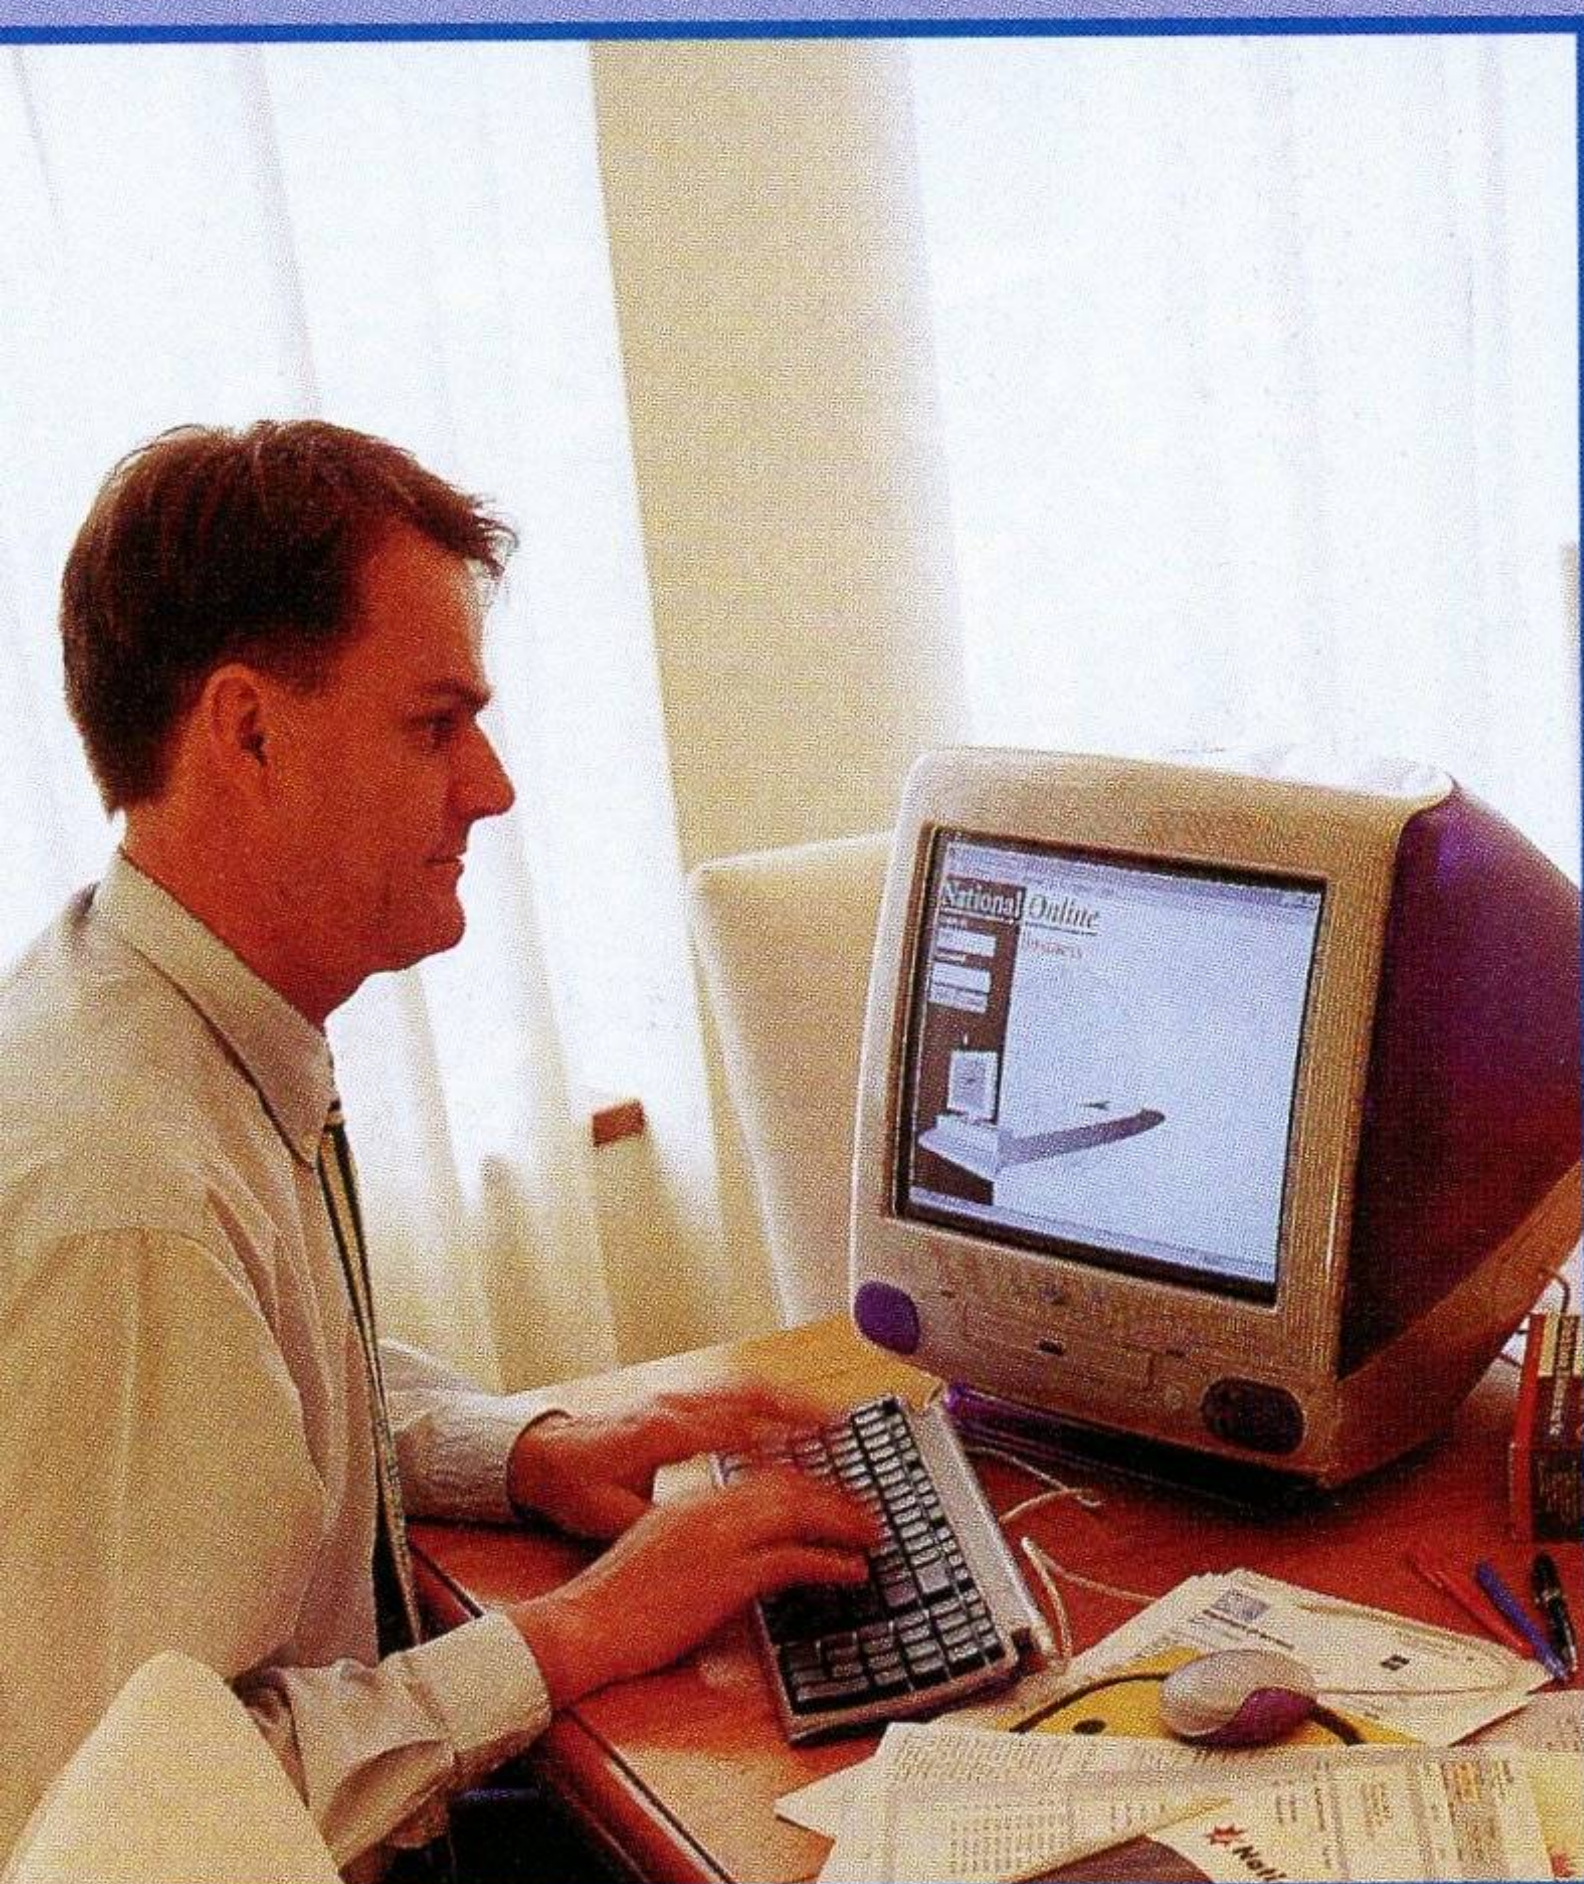

"Switching between emulation modes is simple – just like switching between any other software applications in Mac mode," said Michael.

The iMac has been a welcome addition to a research agency that has always depended on sophisticated technology to be ahead of its competitors. Stancombe's research helps blue chip companies develop marketing strategies to reach their target audiences.

"Our iMac solution will pay for itself within two years by reducing our bank transaction charges and other associated manual banking costs.

With 15 staff paid fortnightly, our bank's manual transaction charges vary significantly over the course of the financial year. Add to that costs associated with paying suppliers manually and the savings benefits of online banking become very significant.

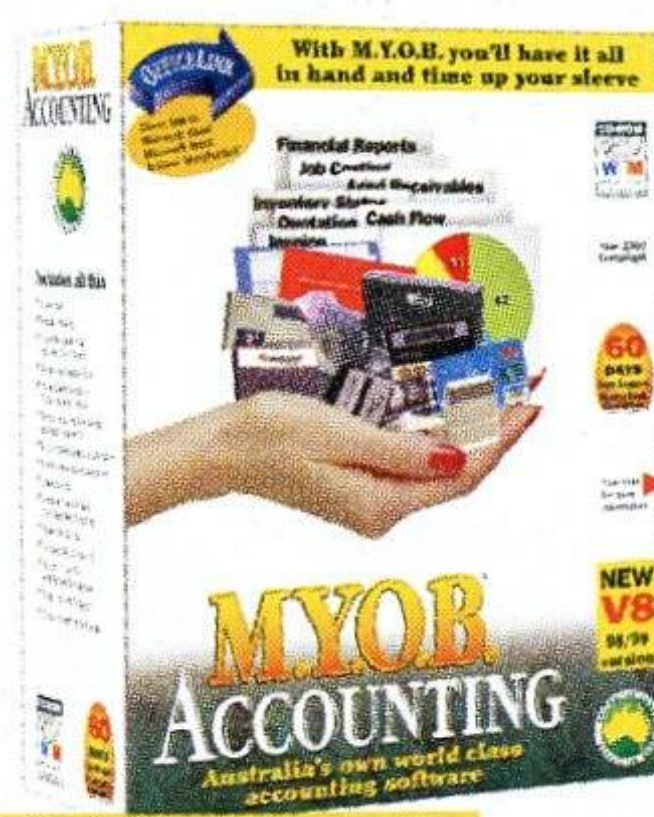

And as to his iMac's future? Michael confirms he is likely to purchase further Macs as general-purpose workstations. They will handle everything from word processing to presentations, spreadsheets to internal and external on-line communications activity, web browsing to image manipulation and, when time allows, games.

1 MYOB Accounting

MYOB Accounting Version 8 builds on all of MYOB's award-winning features and adds

- User-definable aging – choose 7-14-21 days or whatever you want
- Electronic payments via your bank
- Improved forms customisation
- and 27 other enhancements.

Features of MYOB Accounting Version 8 include; General Ledger, Chequebook, Sales & Receivables, Purchases & Payables and full Inventory.

4 Mac OS X Server

Mac OS X Server software is ideal for managing your network and Internet access. It makes it easy for you to deliver web and digital media content over the Internet or manage networks of Mac OS-based clients – all at a surprisingly affordable price.

Mac OS X Server is based on a new core operating system that delivers higher performance and greater reliability with the trademark simplicity and friendliness of Macintosh, Mac OS X Server makes it possible for most customers to go from shrink wrap to serving in less than 30 minutes.

2 MYOB Accounting with Payroll

Extends MYOB Accounting with a fully-integrated payroll, so whenever you process your pays the rest of your accounting system is automatically and instantly updated. Features include:

- Automatically calculates P.A.Y.E. tax.
- Prints pay cheques and/or pay slips.
- Automatically calculates superannuation, workers compensation and other employer expenses.
- Calculates and tracks sick, long service and annual holiday leave entitlements.
- Handles hourly, salaried, overtime, bonus and commission earnings.

5 Mac OS 8.5

Mac OS 8.5 is a major step forward for the Macintosh operating system. A must-have upgrade for all Apple customers. Mac OS 8.5 is about working smarter not harder. Features include:

- Sherlock technology which introduces significant advances in Internet search capabilities hunting across multiple search engines simultaneously.
- ColorSync, guaranteeing colour accuracy from screen to print to web
- networking performance that's much faster than Windows NT
- fully native PowerPC AppleScript that automates complex workflow operations, and much more.

3 MYOB Premier Accounting

Multi-user accounting that's as easy as MYOB

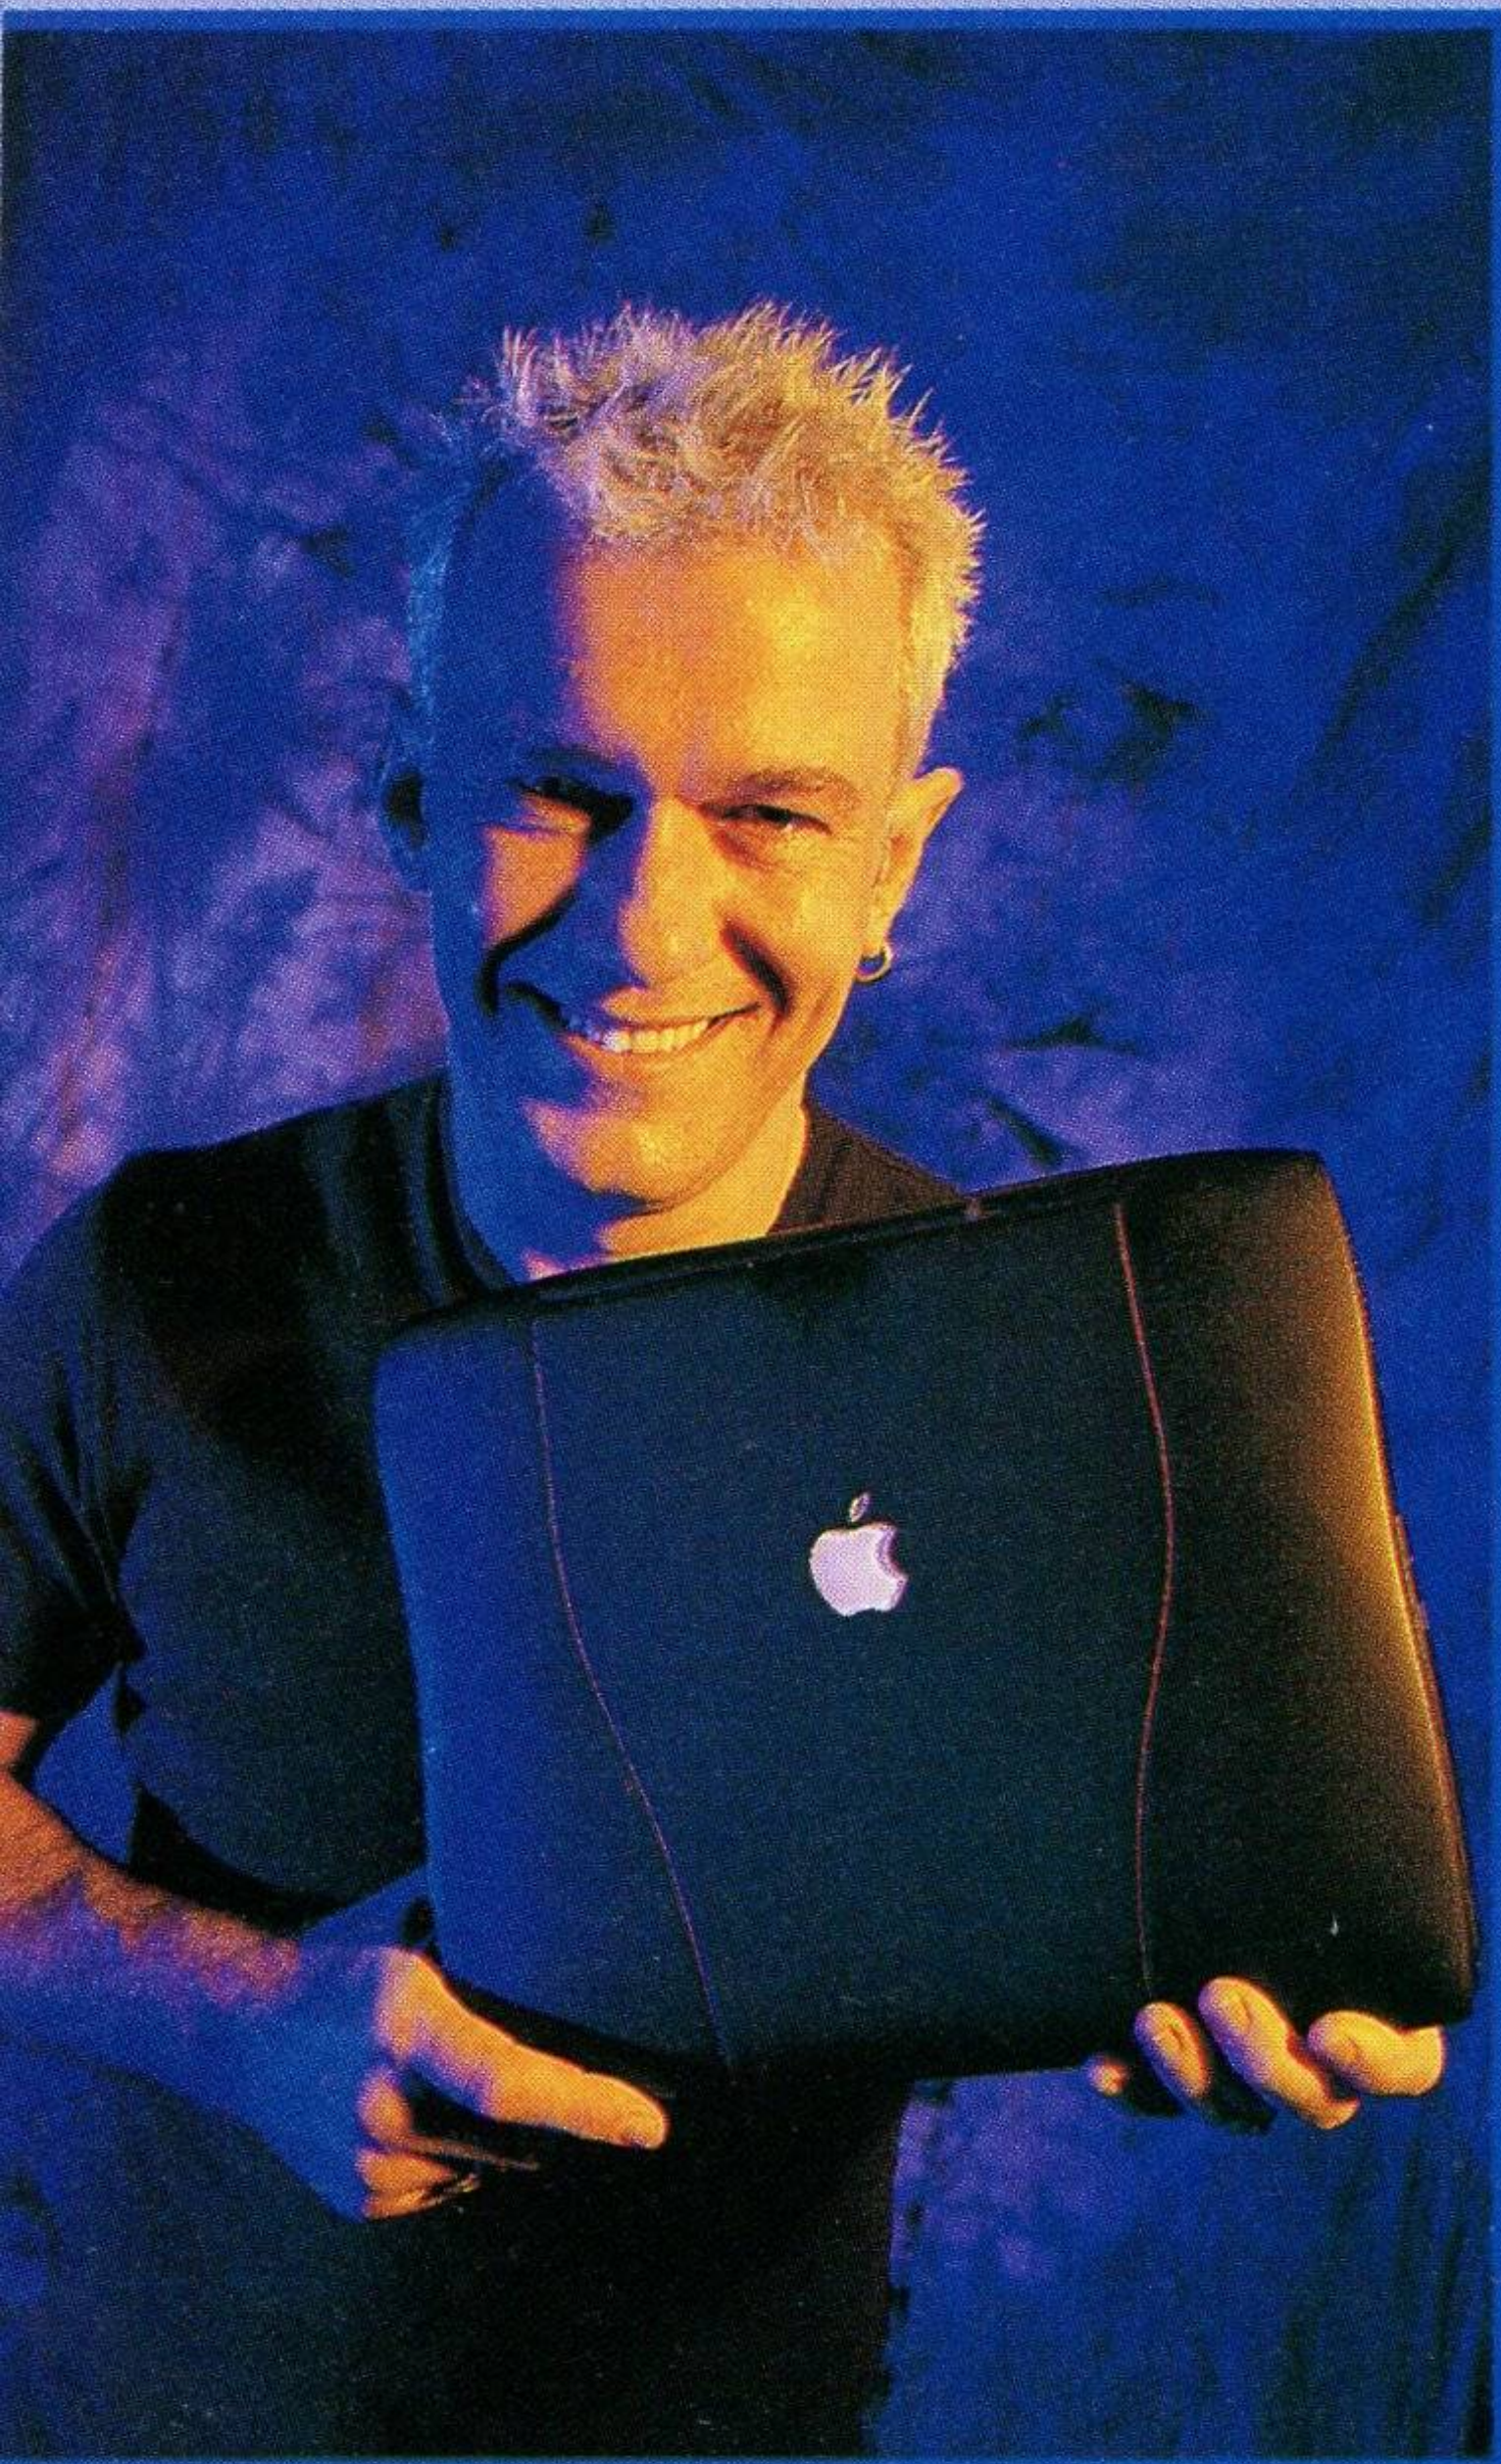

All the accounting features of MYOB Accounting with Payroll, plus additional features tuned for use across a network by multiple users. MYOB Premier brings the power, flexibility and award-winning ease-of-use of MYOB to multiple concurrent users. Includes access for 3 concurrent users – additional licences can be easily added.

6 Sellit!

If you are in business, the product you need for everything you need to know about your customers is SellIt!, designed to improve your sales and profitability.

A sales management system which is like having your own personal assistant without having to pay the salary. Launch Sellit! and it'll tell you ... which contacts you need to get in touch with, what your schedule for the day is, which tasks, quotes, sales orders & marketing letters need to be followed up, which letters need to be sent out, how your quotes and sales orders are going who your best customers are. Plus much more!

Hanging out with Jimmy

Jimmy Barnes and his new Mac!

Ever wondered what it would be like to hang out with Jimmy Barnes backstage at a concert? While wild parties have been known to happen after the show, before the show the man with the distinctive voice is more likely to be typing away on his new PowerBook G3.

"I may or may not be writing a book", says Barnes coyly when asked what he's up to. Whatever the case, he's certainly giving his AppleWorks word processor a good workout. Jimmy has also taken advantage of the PowerBook's high performance capabilities by installing Digidesign's Pro Tools software - high-end music software for recording and mixing.

With Pro Tools on his PowerBook, Jimmy has a 'virtual studio' under his arm weighing less than 3kgs. Jimmy recently upgraded his older Mac to a top-of-the-line PowerBook G3 with 14" monitor.

"The screen is amazing...it's so clear," says Jimmy. "It's so fast too. Software loads in seconds."

With a road lifestyle that clocks up more miles than most high-flying executives, Jimmy needs a computer that is portable, versatile and durable. A PowerBook G3 fulfills all of these needs.

He takes his PowerBook on planes to everywhere he goes. In hotel rooms, he logs onto the Internet and checks email daily.

"Email, now on my PowerBook is a great way to keep in touch with family and friend's while on the road," says Jimmy.

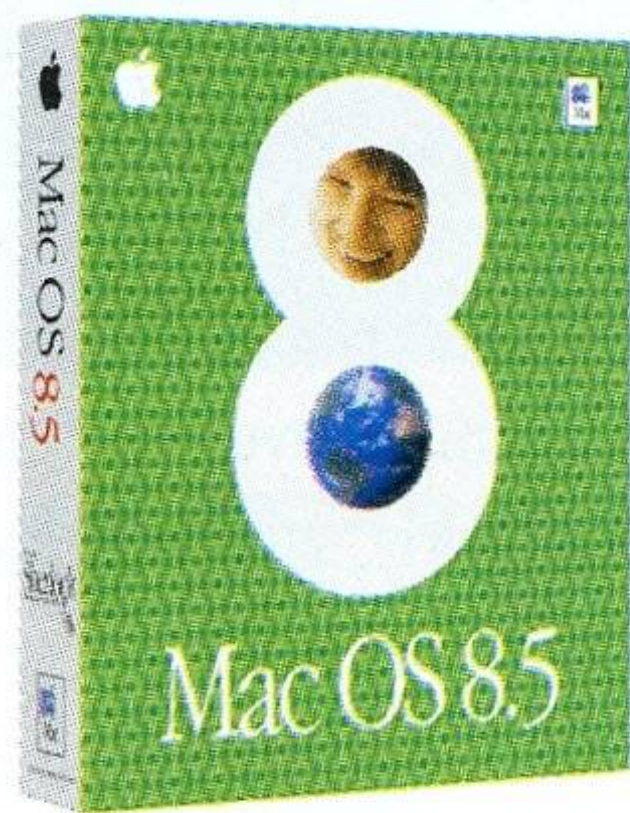

However, Jimmy says the most impressive thing about his new PowerBook G3 is speed, particularly with his newly installed Mac OS 8.5

"Rather than spend hours reading manuals, you just point and click and you're away. I hate waiting, that's why I use a Mac. Cheap Wine and a PowerBook."

Flexirent 
The modern way to pay for technology

*Conditions apply. Subject to credit approval.

WHY FLEXIRENT?

Flexirent is the modern way to pay for Apple technology for your home, home office or business. It's an affordable rental program that enables you to spread the cost of equipment over 2, 3 or 4 years, with convenient monthly payments. There's no deposit required, so you can avoid the restrictions of a cash budget or credit card limit.

Don't tie yourself to outdated equipment. Keep on top of change with Flexirent's easy migration path to new

technology. When you Flexirent, you have the flexibility to trade-up when your needs change or when Apple releases new technology.

Flexirent is the smart way to access the equipment you really want, for the solution you really need ... include printers, scanners, software and AppleCare services in the monthly rental. And if you're using the equipment for business, the rental payments are typically tax deductible.

Eye-catching design

Self employed graphic designer and self-confessed Mac addict, **Eilish Bouchier** is rapt in her new Power Macintosh G3 450Mhz.

"It's funky and it's fast. Two essentials for me," she says. "For a start, it's not very stylish for a designer to be seen driving a beige box these days. Secondly, I need to crank through the work to meet urgent deadlines that are all part of my job description. And the way I see it, the less time I spend watching that little wheel spin around, the better!"

Eilish has really noticed the difference with the superfast G3 processor, especially with the huge graphics and Photoshop files she works with daily.

"This is much faster," she says, patting her G3 affectionately. "It takes considerably less time to do routine tasks, so I can be far more productive when I'm working. All of my software is running a lot more smoothly, from Quark Xpress through to Adobe Acrobat. I have to say I'm impressed."

As a graphic designer, Eilish has to produce highly polished professional designs that are functional and creative.

"I do a lot of catalogue, book, magazine and brochure work," she comments. "So it requires good attention to detail and I have to design every page so customers just can't resist reading on."

"With the 21" monitor I can view double-page spreads to size, which is essential to get

a balance in the design. I'm really happy with the way the colours display. I took the trouble to set up ColorSync profiling, which is part of System 8.6 and quite easy to do. Now what I see on my monitor is what I get when the final printed piece is delivered. Monitors are critical to designers. We don't just need them to be super accurate, we also need them to be crisp to avoid eye-strain. This one is the best I've ever used."

Eilish has complemented her Power Macintosh G3 computer with a fast laser printer, a CD-ROM burner and a Zip and Jaz drive for large files providing her with a complete set-up for professional service. She also has a Macintosh PowerBook 400Mhz which she uses as a second computer with another monitor. She chose the PowerBook over another desktop to use for client presentations as she is doing more and more digital work. It gives her the flexibility to do some work from home or last minute corrections on site with clients.

But it's not all work and no play for this power user, Eilish confesses to being secretly addicted to Quake II, the ultimate 3D game. "Well," she says, "when you have a machine this mean, you have to let it rip now and then. You should see the way it handles the graphics and animations!"

- Panorama Stitcher — combines and integrates individual photographs into a seamless QuickTime VR panorama.
- Panorama Maker — converts panoramic images into fully functional QuickTime VR panoramic movies.
- Scene Maker — links panorama and object movies to create a complete immersive QuickTime VR scene for deployment on CD-ROM or the web.
- Object Maker — works with a variety of turntable and gantry systems to capture video images (or digital still images) frame by frame.
- Project Manager — manages source files (images, movies, hot-spot tracks) used in production of complete QuickTime VR scenes.

AppleCare

Get AppleCare Premium Support for a dollar*!

Now when you buy a new Apple Computer from your nearest AppleCentre, you can get 30 days of AppleCare Premium Support for just \$29.95. That's less than a dollar a day for:

- support until 9pm EST weekdays
- support from 12-6pm EST on Saturdays
- priority 1-3 local-call-charge number from anywhere in Australia**
- next-business-day eMail based support

Get more from your new Apple computer or software upgrade by asking for AppleCare Premium Support 30-day pack.

No risk! We're so confident you'll enjoy our services, that we'll even credit you the whole amount (\$29.95) against the cost of any of our annual support subscriptions!

**Call charges may be higher from mobiles.
* One dollar per day, based on AppleCare Premium Support Trial offer of \$29.95 for 30 days. For terms and conditions see <http://www.apple.com.au/support>

Check out where your local AppleCentre is on page 47.

Unless otherwise indicated all prices are recommended retail prices at the time of going to print. Flexirent prices are based on 36 month term. See page 23 for more details.

WEB SOLUTIONS

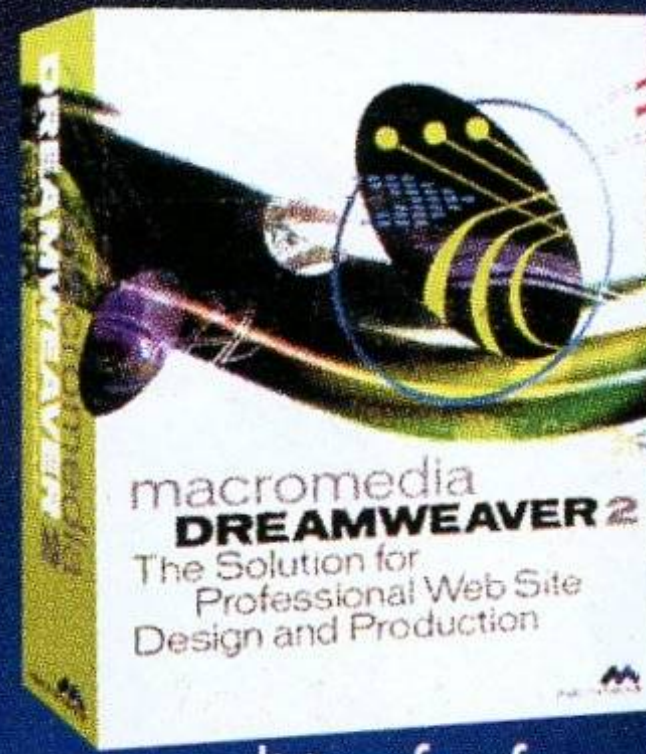

DreamTeam \$1049.00

Fantastic value!
The *DreamTeam* provides Web designers and developers with the premier package of tools for creating the basic building blocks of interactive Websites. Includes *Dreamweaver*, *Fireworks* and *Flash*.

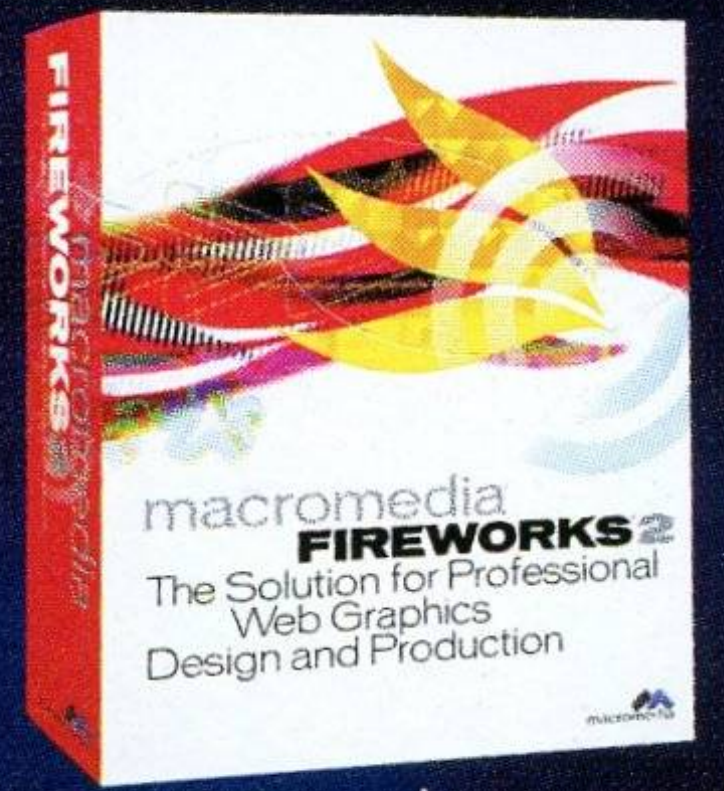

Dreamweaver 2 \$569.00

Dreamweaver 2 is the solution for professional Website design and production. It is the only tool to offer Roundtrip HTML between visual and source editing for fast creation of great looking, cross-browser Websites.

Fireworks 2 \$379.00

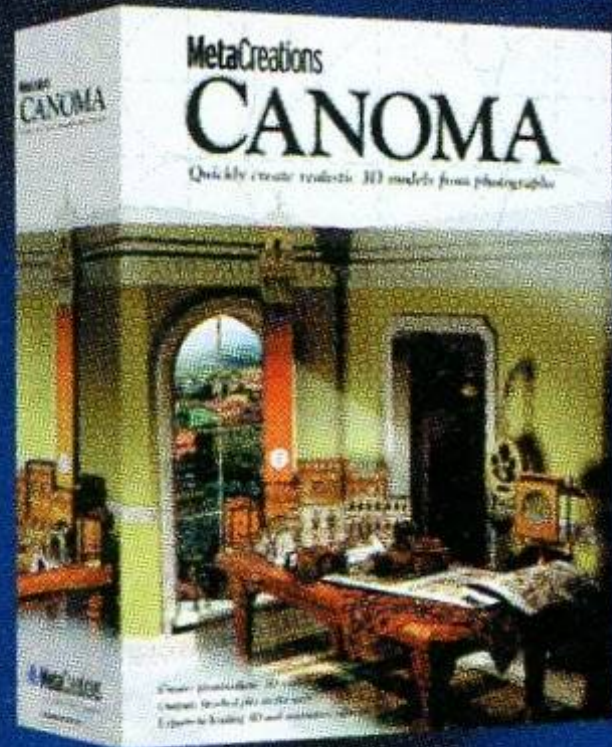

Fireworks 2 is the first graphics production tool to overcome the specific challenges facing Web graphic designers. With just one application, you can now design, optimise and integrate fully editable Web graphics.

DIGITAL MEDIA

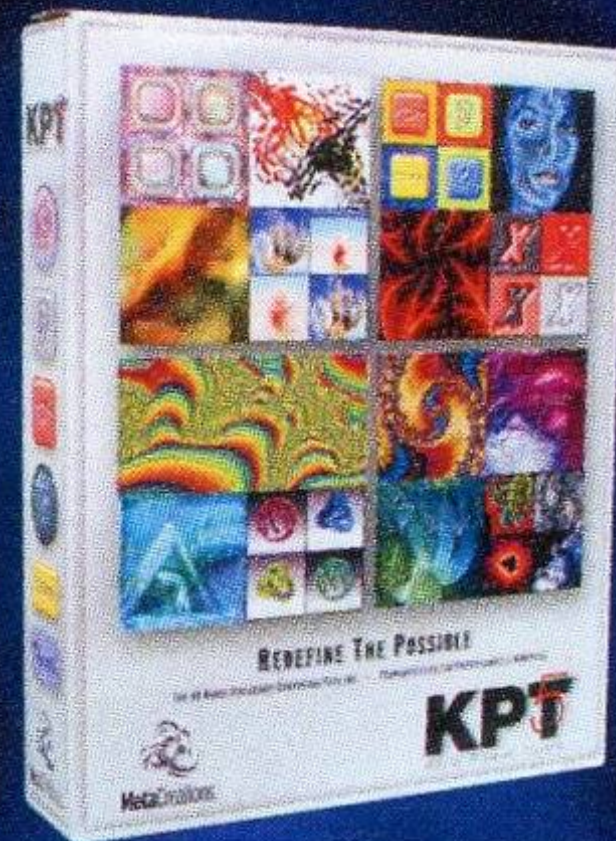

Canoma \$999.00

Quickly create realistic 3D models from photographs. Model furniture, interiors or buildings. Interactively walk through models and create animations. Then retouch surface textures using your existing image editing tools and plug-in filters.

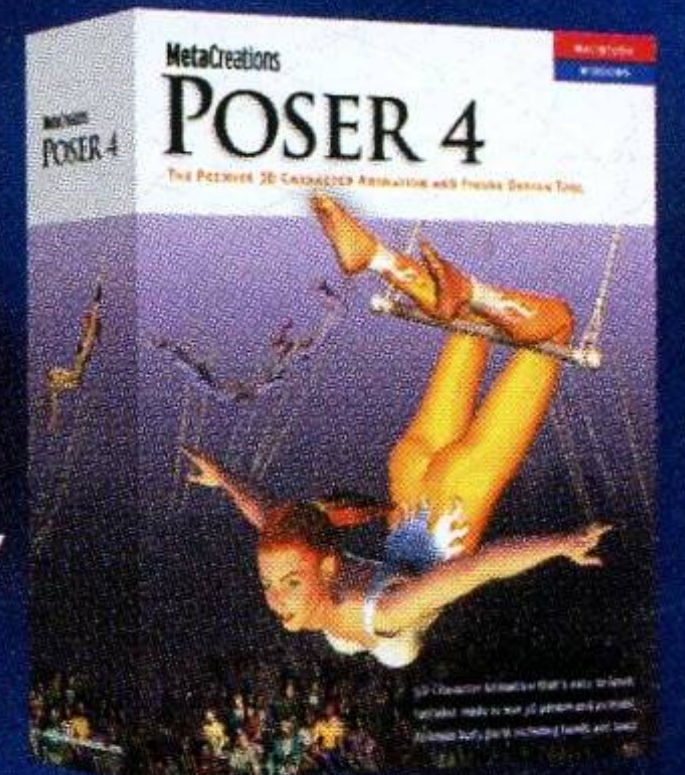

KPT 5 \$329.00

KPT is the premier collection of plug-in software tools for Adobe Photoshop and compatible host applications. Explore fantastic textures, vast fractal vistas, complex 3D objects and endless new permutations of radical image-altering algorithms.

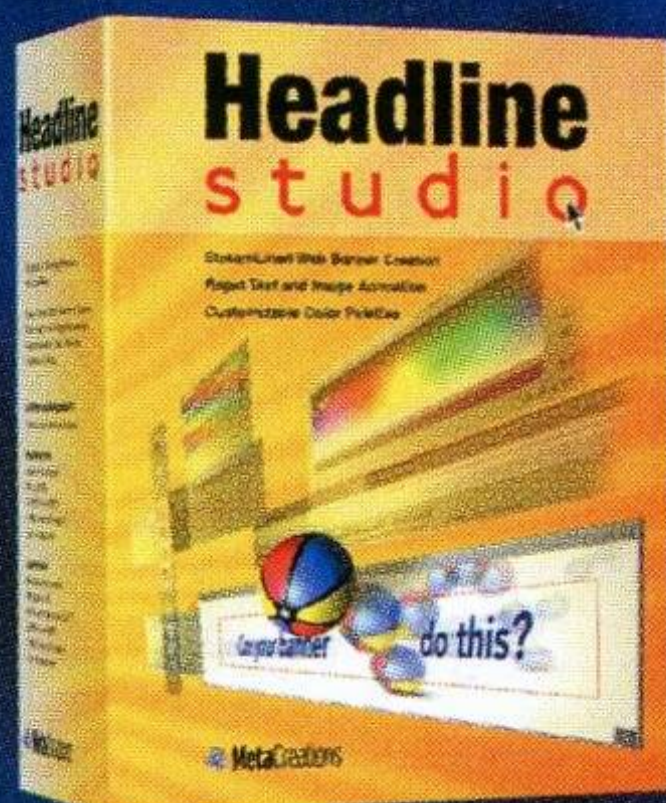

Poser 4 \$459.00

Harness the power of 3D-Character animation with *Poser 4*, it's fast, easy and affordable! Animate a 3D actor to tell your story. Create an electronic comic book with dinosaurs, people or futuristic robots, all interacting on stage.

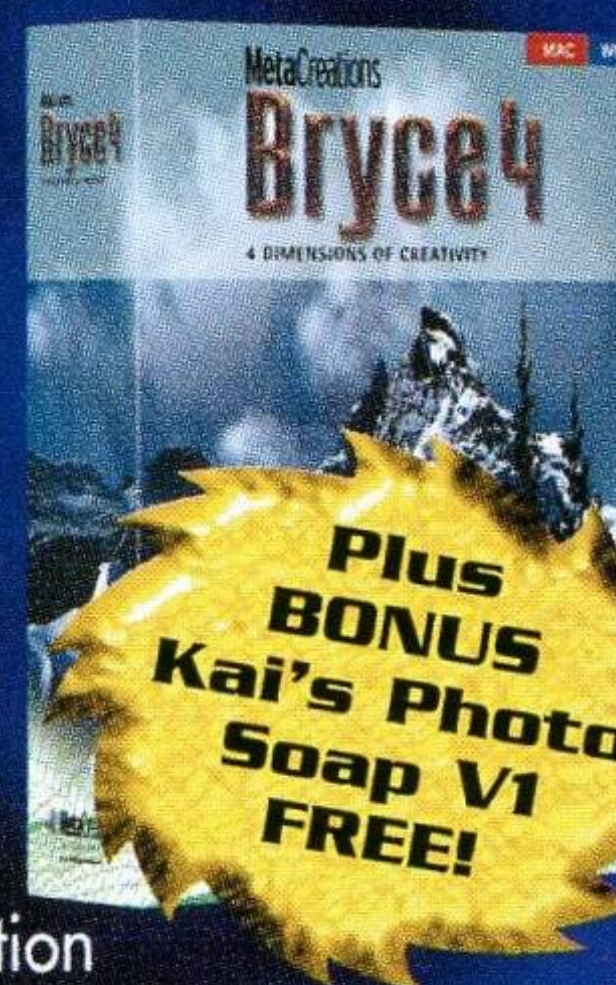

Headline Studio \$549.00

Headline Studio brings broadcast-quality graphics to the Web with tools specially designed for banner creation. With video effects such as walk-ins, dissolves and fades for images and text, Web authors have newfound design freedom and workflow speed.

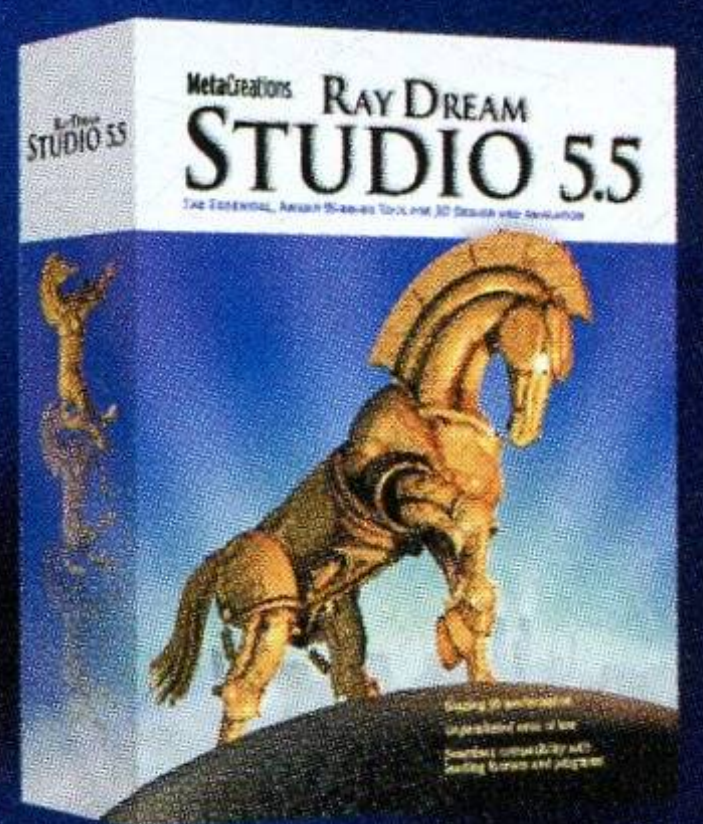

Bryce 4 \$549.00

Bryce 4 is dedicated to designing, rendering and animating breathtaking natural 3D worlds and abstract 3D sculptures. *Bryce* is the perfect application for both beginners and advanced users because it comes loaded with libraries of presets to use in your own work!

Ray Dream Studio 5.5 \$659.00

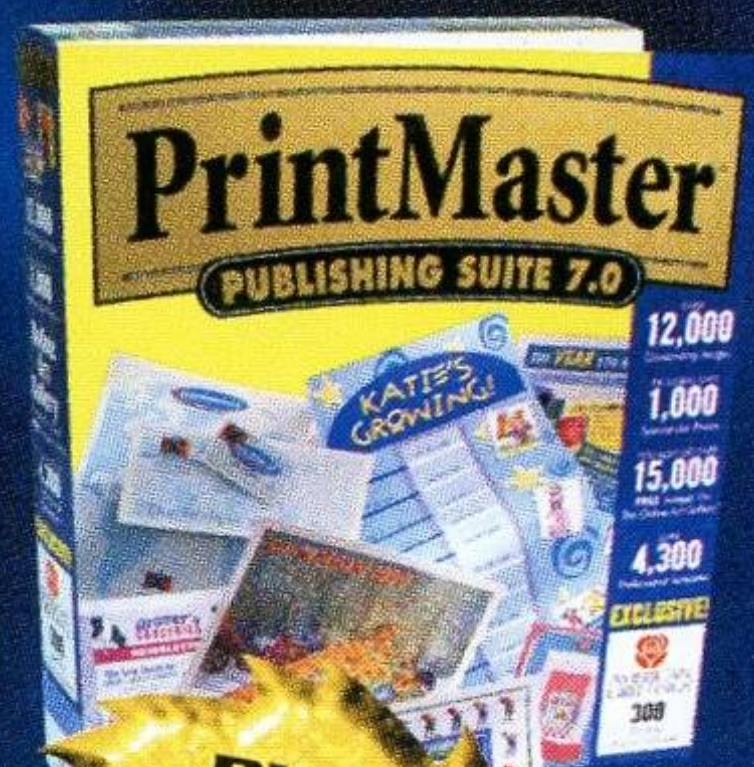

Ray Dream Studio 5.5 is the essential 3D graphics application, providing a comprehensive set of professional tools for 3D design and animation. This exciting new release includes *Ray Dream Studio 5.0.2*, plus additional content and plug-in features.

HOME OR OFFICE

PrintMaster Publishing Suite 7.0 \$99.95

The full-featured print productivity program everyone can use! *PrintMaster Publishing Suite* is an easy and fun print creativity program with over 12 000 outstanding images including exclusive original art and 1 000 spectacular photos.

3 **\$399**
MPlayer3 with MultiMedia Card

3 MPlayer3 – the portable MP3 Player with MultiMediaCard

MPlayer3 – the German made portable MP3 Player with MultiMediaCard enables you to load MP3 music from the Internet to flash MultiMediaCards and to listen to CD quality music wherever you are. There is no integrated RAM. This enables you to increase available storage, and change the music by simply changing the card. You don't have to keep downloading each time you want to change the music. It's also the only player with bass and treble control and 2 flash card slots. MPlayer3 also supports future music store media: ROS cards (Record on Silicon). This technology is supposed to replace CDs. MPlayer3 is shipped with 2x16MB MultiMediaCards and is already capable of managing future generations of cards. The L.E.D. software for MAC/PC, high quality earphones and serial interface is provided.

2 | \$12,779
Xerox Docuprint C410

2 Xerox Docuprint C410

The Xerox DocuPrint C410 prints 4 pages per minute (ppm) full colour and 16ppm black and white at 600 x 600 dpi resolution. And it prints not only A4, but also oversize A3 - a significant development in that it now allows colours to be printed right to the edge of a standard A3 page. This development is of particular importance to the graphic design industry.

The C410 deftly handles contrast and is able to tackle even the most subtle ranges of light colours and varying gradients.

Monochrome printing is also of a superior standard as the black processing also includes the 3 bit imaging.

- Tabloid printing - allows edge bleed printing
- Universal paper cassette accommodates paper sizes of 12" x 18", A3, B4, A4, B5, letter
- Prints on stock 60gsm up to 220gsm
- Fast Fiery X2e controller with memory management gives faster job processing and output
- 600 x 600 dpi with 3 bit imaging per colour
- Fast 10 Base-TX network interface
- True Adobe Postscript 3
- Contone support, highest quality graphic printing
- 136 Roman Postscript fonts

Conflict Catcher 8

1 Conflict Catcher 8

Conflict Catcher 8 sets the industry standard in Startup File Management and Conflict Identification. In the event of a problem with your system, Conflict Catcher will help determine which files are causing problems. And, the new Clean System Merging feature will make upgrading to Mac OS 8.5.1 a breeze!

Also, scan for damaged files and folders, cleanly rebuild your desktop, use Conflict Catcher 8 in conjunction with the Location Manager. See many different views of your startup files - including "by company", Includes Contextual Menu support for files, sets, links and more!

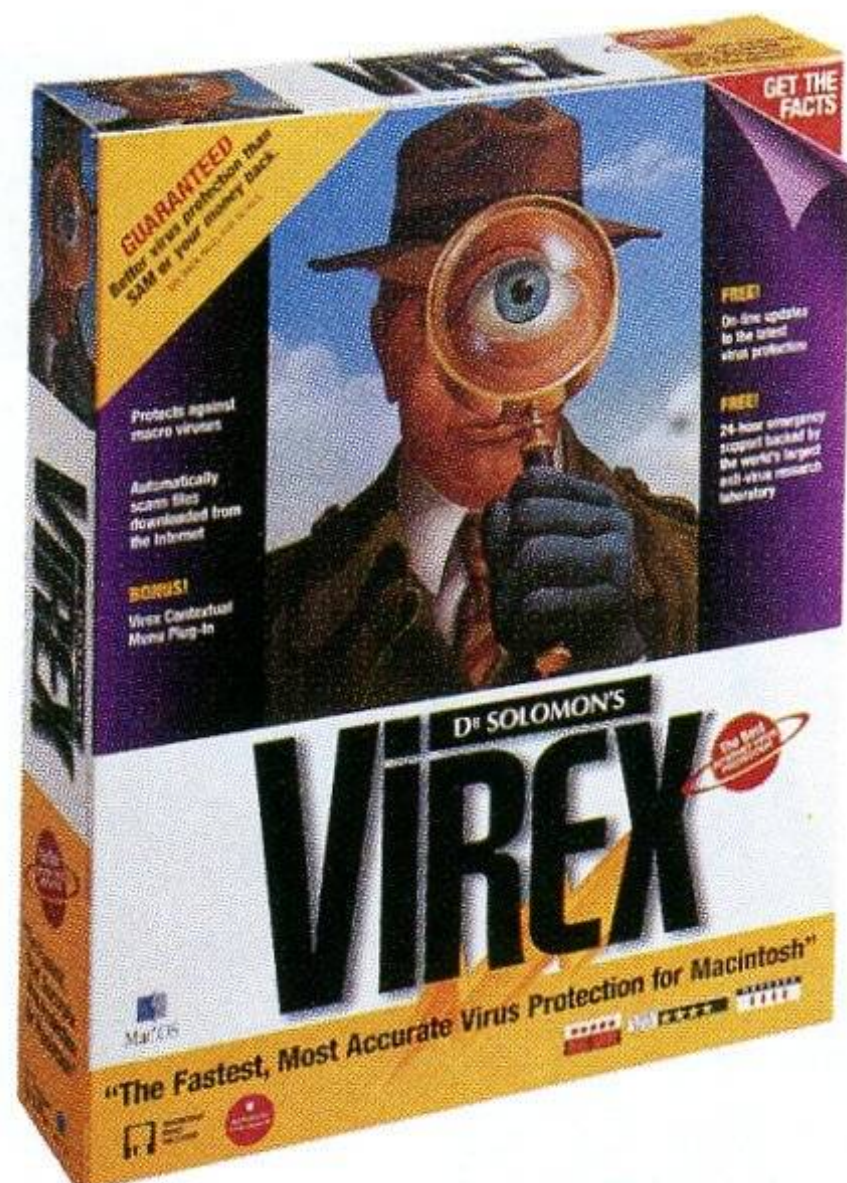

CG30

2 Virex 5.91

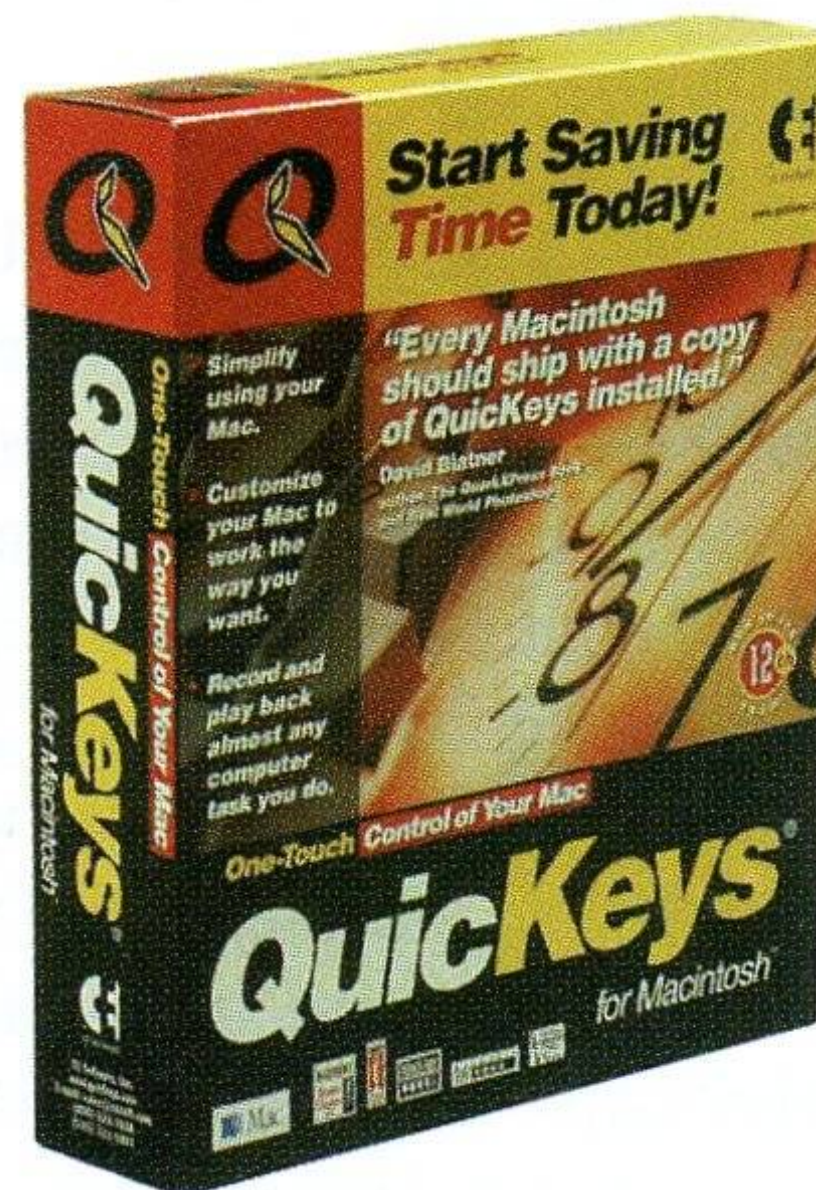

Virex 5.91 ensures your Macintosh is completely protected, whether you are downloading files from the Internet or copying files from a diskette or server. You are most vulnerable to virus attack if you surf the web, receive email or use disks from school or work.

Virex protects your system from all known Mac OS infectors and its Universal Scan-At-Download feature shields you from all downloaded viruses. It even catches viruses hidden in email attachments. Virex is easy to configure and use. Scheduled scanning can be performed, as well as instantaneous scanning with the Virex Contextual Menu Plug-In. Virex includes context sensitive help and an intuitive virus encyclopedia so virus information is always at hand.

QuicKeys 4.0

3 QuicKeys

QuicKeys dramatically reduces time and effort spent on your Mac by automating all your most routinely-performed, multi-step operations - on demand, in every application! QuicKeys extends the functionality of the Mac OS, providing a time-saving automation toolbox across your entire computing environment. So whether your specialty is tweaking pixels or crunching data, your everyday productivity soars.

With QuicKeys, you can create and edit your own customised set of shortcuts for each and every application, and they're always immediately accessible from your keyboard or mouse.

CES720

4 QuickMail Office 2.0

QuickMail Office is everything you need to set up and maintain a rock-solid business e-mail solution for Windows NT, Windows 95 or the Mac OS.

Your business requires a communications tool that pulls the team together, boosts productivity and speeds business processes. That tool is e-mail. But not just any e-mail will do. Efficient and effective business communication is too important to be left to chance. Your e-mail needs to put the Internet at your fingertips. Plus, your e-mail has to be powerful, and it must be easy to use.

(packages from 5 to 100 users)

Memory prices are extremely volatile, literally changing day by day so before you buy memory for your Macintosh, check the current prices. Always make sure you're buying memory that meets the specifications of your Macintosh. When you buy Apple memory, you can be sure of getting the very best.

Guaranteed by Apple for life. Only genuine Apple memory is branded with the Apple logo. Memory for most other Macs also available. Pricing correct 2/8/99

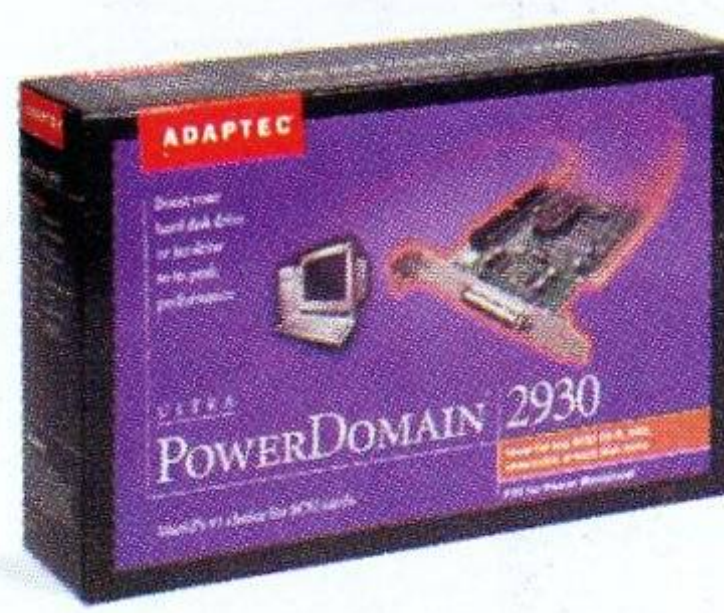

Powered Performance and Connectivity from the Leader in SCSI.

10Mb/sec
SCSI Card 2906

Run your Zip drive or scanner up to **6 times faster** than a parallel port connection with SCSI Card 2906 from Adaptec, **the world's number one choice for SCSI Cards**. And you can add up to 7 peripherals (internal, external, or both) just by daisy-chaining them together and **enjoy super performance** with each of them.

20Mb/sec
PowerDomain 2930U

Adaptec PowerDomain 2930U **provides 20Mbyte/sec Ultra SCSI performance, four times the performance of built-in Mac SCSI**, at an affordable price. It works with Old SCSI manager as well as newer SCSI Manager 4.3 compatible devices, and enables users to **achieve maximum performance** from their existing SCSI peripherals. And, with SCSI coming off the motherboard, this card protects the user's SCSI peripheral investment.

80Mb/sec
PowerDomain 2940U2W

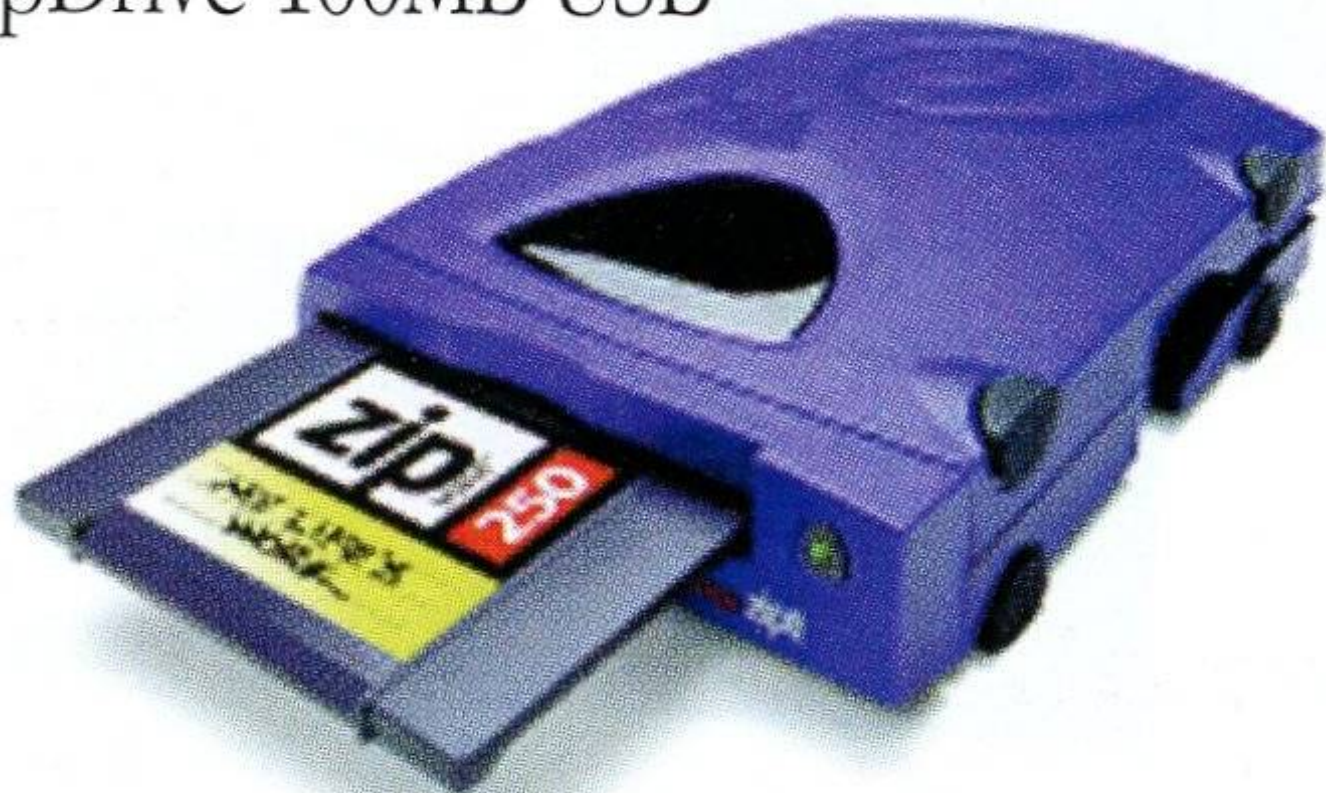

Adaptec, **the most trusted name in SCSI**, offers the power of Ultra2 SCSI (LVD) technology in the 2940U2W host adapter. **Delivering 80 MByte/sec data rates and support for legacy SCSI devices**. Built on proven SCSI technologies, Ultra2 SCSI uses a low-voltage differential (LVD) SCSI bus to **provide unprecedented data transfer rates, better signal integrity, and longer cable lengths**.

For more information, please contact your nearest AppleCentre or visit our website at www.adaptec.com

Imation SuperDisk Drive USB

1 Omega Zip 100Mb USB

This Zip drive offers an easy to use cross platform solution for both Windows 98 PCs and Mac USB users. Sleek in design with a transparent casing and lightweight cable, the USB Zip drive is simple to connect, has large storage capacity. Hot plug and play allows users to connect to a USB Zip Drive without turning off and rebooting the computer.

Omega SCSI Zip 100MB USB \$275

2 Omega Zip 250MB

The next generation in removable storage, the new Zip 250MB Drive offers consumers the reliability of a Zip storage system with dramatically increased capacity. Zip 250 drive can read and write to the new Zip 250 MB disks as well as the original 100MB disks.

Omega Zip Built-In (not shown)

Our built in drive offers users all the reliability and capacity of the Zip 100MB with the added speed and convenience of the ATAPI interface. It provides a powerful and convenient removable storage option while not taking up any additional desk space.

3 Omega Jaz 2GB

Omega's Drives and disks offer the ultimate high performance storage and back up solution for today's high end PC and Mac users. With a transfer rate of 8.7 MB per second, the Jaz 2GB operates more effectively than most hard drives and is fast enough to deliver full screen, full motion video. Jaz 2GB also allows for scheduled backups and total crash recovery at speeds of 20 minutes for a full 2 GB hard drive.

1 Imation SuperDisk Drive USB

Want to add a diskette drive to your iMac? How about a 120MB removable disk drive? Now you can do both.

iMac-friendly SuperDisk Drive does double-duty. Use Standard and 120MB Diskettes. The Imation SuperDisk USB Drive can read and write standard 3.5" diskettes — both Macintosh and PC — and read and write 120MB SuperDisk diskettes. And it plugs right into your iMac's USB port.

Store, Save, Share and Back-Up Big Files

With the SuperDisk USB Drive and 120MB diskettes you'll be able to:

- Store big images, photos, videos, multimedia files and more
- Free-up space on your hard drive
- Download large Internet files
- Share large files with others
- Back up your valuable files, folders and applications
- Protect your private information
- Organise your programs and files

Why USB?

USB was jointly developed by more than 400 manufacturers.

Apple picked it for the iMac because it's ...

- Plug and play - just make the connection and you're ready to go
- Hot swappable — add or remove scanners, external drives, printers and other peripherals without shutting down your computer
- Hub-and-spoke daisy-chain 127 more peripherals at the same time

The SuperDisk Drive Details

- Connects to the iMac's USB port in seconds
- Reads and writes 2HD 3.5" PC and Macintosh formatted diskettes
- Reads and writes 120MB SuperDisk Diskettes
- Sleek design complements the look and feel of the iMac.

UniTrap fits over a standard iMac mouse to give it a comfortable contoured grip. It includes 5 coloured mouse buttons

2 UniMouse

UniMouse is available in a choice of 6 colours and features 3 individually programmable buttons (universal or application specific) with a comfortable contoured grip.

3 UniTray

UniTray is an ergonomic mouse pad with palm rests (Gel pads) to alleviate RSI. It's available in a choice of 5 colours.

4 USB extended keyboards (not shown)

MacSense USB extended keyboards come in 5 Fruity Colours. They give the feel and touch of the familiar Beige Apple Extended Keyboards and are priced at RRP\$ 129.

5 QPS Que 4Wx2RWx8R CD

Rewritable external drive features a USB interface and styling to complement iMac. The drive comes with Toast and a carry case.

6 QPS Que!

DVD RAM drive reads and writes to 5.2 GB DVD RAM cartridges and is compatible with DVD movie discs. It features a SCSI interface. The drive comes with DVD Mastering S/W and a carry case.

What year 2000 problem?

Apple & Y2K
-good news

www.apple.com/about/year2000/

"We may not have got everything right, but at least we knew that the century was going to end."

Noted writer and AppleMaster Douglas Adams

Computer systems that cannot correctly process dates beyond 2000 are at risk of failure one second after midnight on December 31, 1999.

The good news is that since their introduction in 1984, Macintosh computers have had the ability to make the transition to the year 2000. In fact, the Mac OS and most Mac dates correctly all the way to the year 29,940. Here's an easy way to check the Year 2000 compliance of Apple products:

<http://www.apple.com/about/year2000/>

What is the Year 2000 Problem Anyway?

Many computer systems use a two-digit date format (mm/dd/yy), and experts believe that these systems could interpret the Year 2000 (00) as 1900.

This means that mission-critical information systems—and the institutions that

depend on them—could be severely compromised by the turn of the century; everything from financial records to hotel reservations would be affected. This scenario of information meltdown has been called the Year 2000 problem, or Y2K. The Y2K problem can come from several sources. Hardware clock circuit may be incapable of holding a date beyond 1999. The Operating System may not correctly recognize and process dates beyond 1999. Software Applications and utilities may have limited date-processing capabilities. In addition, some systems may not recognise that the Year 2000 is a leap year. If a year is evenly divisible by 4, it is a leap year, unless it is also evenly divisible by 100. But if a year is also evenly divisible by 400, it is a leap year. So 1900 was not a leap year, but 2000 is. For more information in regards to Apple and the Year 2000 visit <http://www.apple.com/about/year2000/>

Do yourself a flavour.

An iMac with matching HP 880c printer

Only **\$2,695** Save \$300!
or less than \$25 per week Flexirent*

Just imagine how productive you'd be with this tasteful combination. An iMac (any flavour you like – blueberry, grape, tangerine, lime or strawberry) and an HP 880c colour printer – any flavour you choose. All for just \$2,695 or less than \$25 per week if you 'Flexirent'.

Your iMac comes with a 333MHz PowerPC processor, a massive 6GB hard drive, 24x-speed CD-ROM drive and

one click connection to the Internet. Plus you get an HP 880c, one of the smartest colour inkjet printers money can buy. You can print to card, envelopes, banners or almost any paper you choose.

More great new products inside!

600 MHz Pentium III — 8.1

400 MHz iMac — 13.1

BYTEmark Integer Index Processor Scores

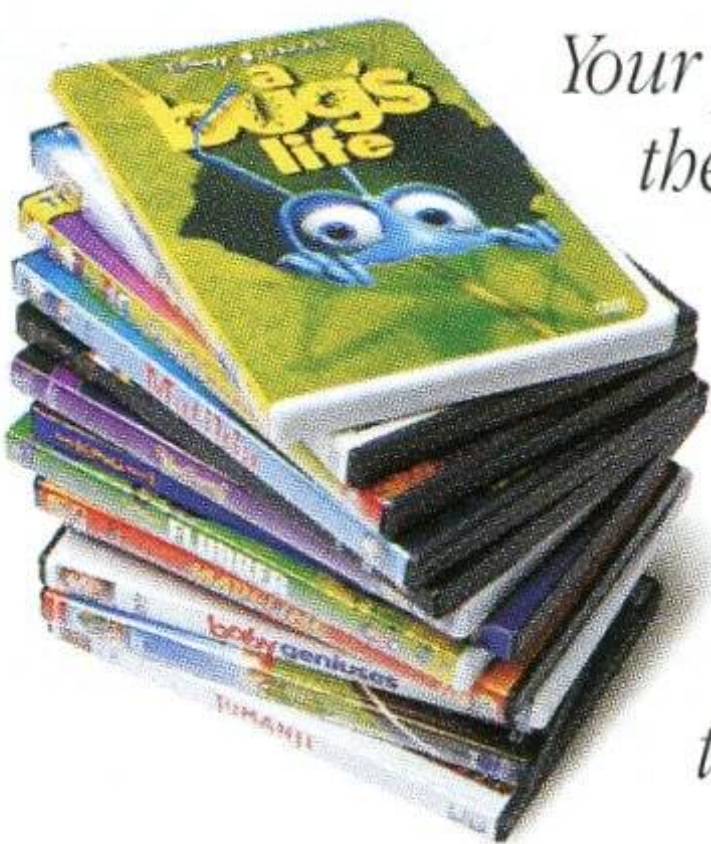

Speed thrills: iMac. The G3 chip in every iMac (up to 400MHz) out-duels even the fastest Pentium III processor in PCs which can cost twice as much.

Let the games begin. A built-in ATI RAGE 128 graphics accelerator with 8MB of graphics memory lets you play the most hyper-realistic 3-D games. (We've included two to get you started.)

Expand at will. Dual-channel USB lets you add over 100 devices -- from joysticks to Zip drives -- with no reconfiguring or restarting.

Now hear this. iMac is the first computer to integrate Harmon Kardon's new micro-speakers, which deliver ultra-clean sound across a wide dynamic range.

Your personal movie theatre. The iMac DV models come with everything you need to watch full-screen DVD movies. (Except the popcorn.)

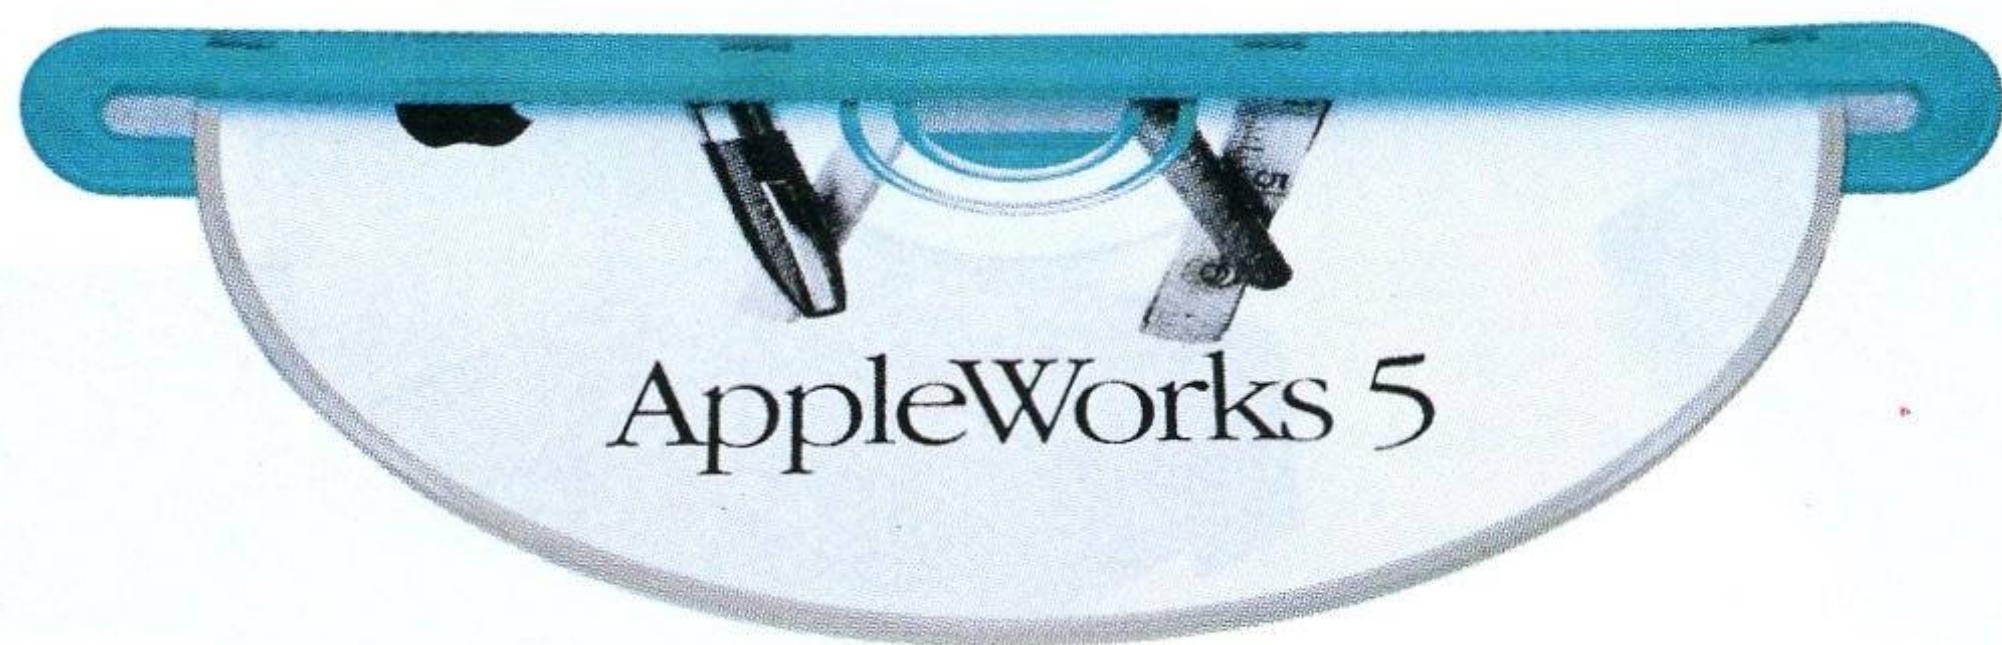

All-new recipe.

In just over a year, more than two million people have discovered that iMac is a fast, easy route to the Internet. And a far more colourful one.

So what could possibly follow this popular home and classroom computer? A completely new iMac, redesigned inside and out.

Our new iMac DV models include Apple's breakthrough digital video

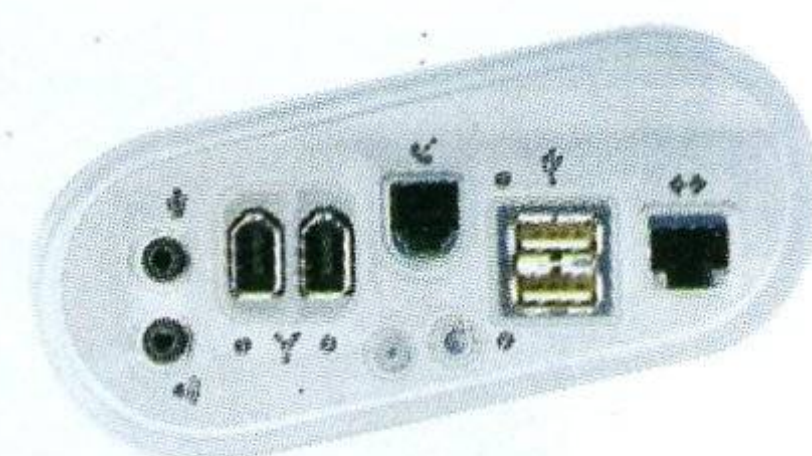

Easy loading. The new iMac is the first computer to feature an elegant, slot-loading CD or DVD drive. No more sliding trays to fumble with as you load software, music CDs or DVD movies.

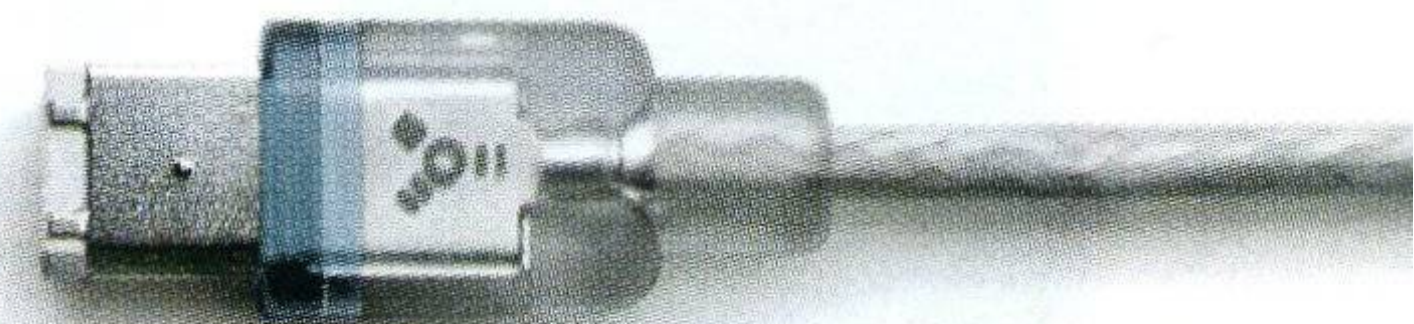

Silence is golden. Unlike PCs, iMac doesn't need a fan inside. It's ingeniously designed to be one of the world's quietest desktop computers.

Get unwired. Connect an AirPort Base Station and up to ten iMacs within 50m can share a single connection to the Internet – without any wires.*

Point and plug. A new doorless side panel gives you easy access to the built-in 56K modem, Ethernet, USB and high-speed FireWire ports.

Blazing peripherals. The iMac DV model has superfast FireWire built in, so you can directly connect to high-speed devices like digital camcorders and external disk drives.

All-new ingredients.

technology, so you can play DVD movies or connect your digital camcorder to create your own pro-quality home movies complete with special effects.

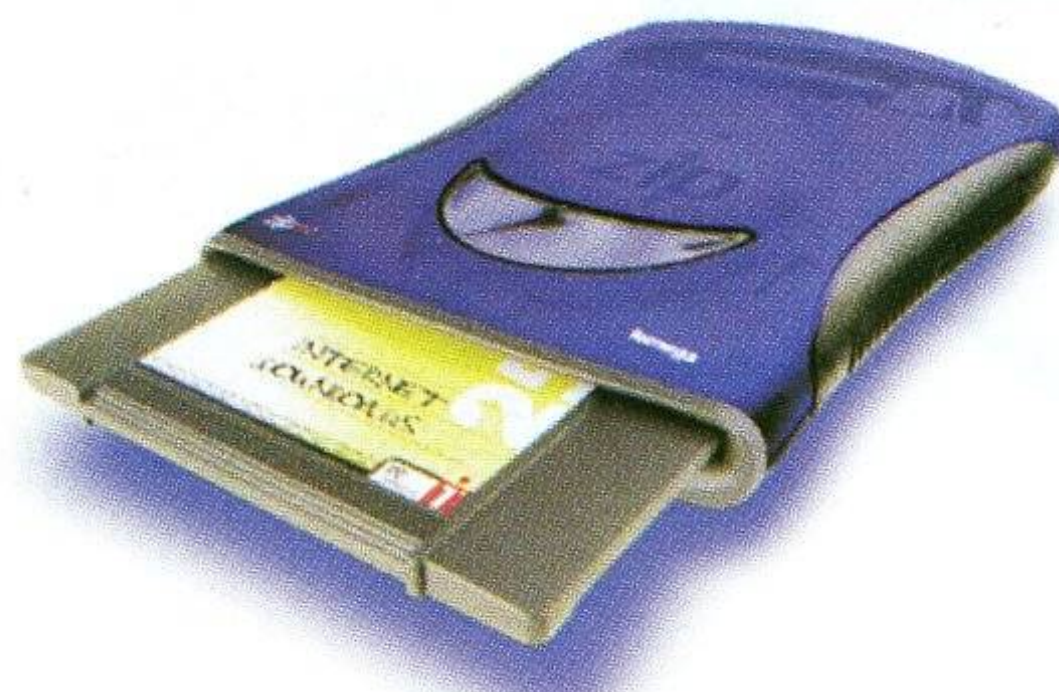

In other words, you get everything you expect from iMac. The computer that makes amazing things amazingly simple. For the full story, visit www.apple.com.au  Think different.

AppleCare at your Service

Safeguard your Apple product for three full years with the AppleCare Protection Plan.

Protection Plan.

The AppleCare Protection Plan provides a host of services to ensure that you get peak performance from your Apple product. Ask your AppleCentre for more details.

Apple Studio Displays

The 21 and 17-inch Apple Studio Displays complement the new Power Macintosh G4 in both appearance and performance, creating a totally integrated system. Just sitting on the desk, they're stunning. Turn them on, and they're equally easy on the eyes. Advanced screen technology means images are brighter and crisper, colours more vivid, and text sharper and easier to read.

Apple Studio Display 17" (16" viewable)	\$1,000.00
Apple Studio Display 21" (19.8" viewable)	\$3,000.00

PowerMac G4

With its sleek industrial design, stunning new graphite colour scheme and Pentium-crushing Velocity Engine power the new PowerMac G4 is the ultimate in performance and provides unprecedented design.

PowerMac

We reserve the right to correct any errors or misprints. Printed for Apple Computer Australia Pty Ltd ACN 002 510 054. All trademarks are the property of their respective owners.

6

*Terms and conditions: To qualify for the Flexirent bonus of a Logitech QuickCam VC USB, the customer (home or business users) must Flexirent an item of Apple equipment containing an Apple CPU (ie an iMac, iBook, PowerBook or G4 product). The Flexirent bonus QuickCam is only available on Flexirent deals approved during the period of the promotion from November 13 - December 24, 1999 or while stocks last. Any customer approved for Flexirent prior to November 13 is not eligible for the bonus. A limit of one bonus per customer applies for the period of the promotion. Subject to credit approval. Flexirent prices quoted in this catalogue are based on a 3 year commercial rental agreement or consumer lease, payable monthly. Rates current at time of publication and subject to change. Conditions apply. See your participating AppleCentre for details.
