# Games

## • GS60 Chips and Dips / Senseless Violence

This disk contains two arcade style games. Senseless Violence, by Brian Greenstone, has excellent graphics and sound. You must get the baby across the freeway without harm. It is meant as fun, but may be offensive to some. In Chips and Dips the player must roam the screen collecting objects while avoiding killer robots. The player must climb ladders and jump onto objects. Similar to the Loderunner game. Also included is the game Ballistics.

## • GS61 Action Games

This disk contains 5 arcade games. As the Link Turns is a fast paced shoot 'em up. Grackel GS was the first GS game developed by Brian Greenstone. Return of Woz has you trying to place a falling Woz into a speeding horse drawn wagon. Car Race and Bounce It are both excellent games with great graphics and sound.

## • GS63 Adventure

This disk contains two adventure games. The Great Cave Adventure Game is a text game, and AginCourt is a graphic adventure game.

## • GS64 Adventure

This disk contains 13 games in basic. Included are Lunar Lander, Eamon.03, Marpel Caves, Minotaur, Ore.v1.1, Seven Gables, Eliza, Dragon.v2.1, Nuke Power, and others.

## • GS65 Board Games

This disk contains numerous board games. One folder contains 12 basic games. The rest of the disk contains the following GS/OS games Yahtzee ( an excellent version of the dice game), Towers of Hanoi, Simon Sez, Plasma Life and Othello.

## • GS66 Card games

If you like card games, this is a must have disk. It contains five different card games which all use SHR graphics. The games are Casino Solitaire, Slot Poker, Pyramid Solitaire, Monte Carlo, and Poker Solitaire.

## • GS67 Game Room - Education / Trivia

This disk contains various educational games. Included are: Another Trivia Game, by Rudy A. Guy, which is a good trivia game written in Basic. Toddler and Preschool Game Room, and ShapeTeacher GS are designed to teach the toddler and preschool level. Also on the disk are two AWGS files, one a database of the States of the Union, and another a word processing document.

## • GS68 Mines of Moria (Text Adventure)

Get ready for action and battle in the underground game Mines of Moria. Fight evil monsters, collect treasures and make your way through the subterranean maze. In the same spirit of D&D, enter the land of fantasy and carry on exciting adventures. Mines of Moria will only run on a IIGS with at least 1 Megabyte of RAM installed

## • GS70 - GS72 Bouncing Bluster

This three-disk set contains a game which is a clone of Arkanoid. You use the mouse to move a paddle at the bottom of the screen. The paddle will deflect a ball which will then knock out bricks in the upper portion of the screen. As you hit some of the bricks, they will release power capsules. If you catch a power capsule with your paddle, it will give you additional features such as the ability to fire missiles or additional balls. As you clear each screen of the bricks, you advance to the next level. Bouncing Bluster requires a special version of the System disk which is included on GS70. You must boot your system with this disk. Bouncing Bluster cannot be launched from the Finder or System 5.0. After GS70 has been loaded, you will then need to insert the GS71 which contains the actual game. Disk GS72 contains a level editor which will allow you to design your own layout of bricks.

## • GS73 - GS76 Mean 18 Golf Courses

Four disk full of Golf Courses for your use with Mean 18 Golf game. You need Mean 18 to use these disks.

## • GS77 Orbizone

Orbizone is an outer space shoot 'em up arcade game that is played with a joystick. It is based on the arcade hit Asteroids, and allows the user to design customized spaceships.

## • GS78 Card games & Plunder

First on this disk is Cartus Primus which is one of the best shareware programs that has been seen. It allows you to play three-handed versions of the following games: Cribbage, Gin Rummey, Pinochle, Hearts, and Pitch. There are also shareware versions of Euchre and Sheepshead on this disk. Second on this disk is Plunder, a game from Dr. Ken Franklin. Plunder is a game of chance and daring for 1 to 4 players. In Plunder you and your competitors find yourself in a treasure room which is filled with various packages. You know most of the packages have treasures but one of them has a bomb. You must decide when to leave the room. If you wait too long and the bomb is uncovered, you lose.

## • GS79 Cosmocade Disk A

Cosmocade is actually two games in one. On this disk,

you get the Journey to Calibus game. It requires a joystick and involves lots of shoot 'em up action. You do not need Disk B (GS80) in order to play Journey to Calibus. You fly your spaceship over various terrain, firing at objects and collecting other objects. Calibus also comes with two editors which will allow you to create your own world.

## • GS80 Cosmocade Disk B

This disk contains Naxos, the second game of the Cosmocade series. You can play Naxos without having the Journey to Calibus disk, but it is strongly recommended you get both disks. In Naxos, you're in a jungle which is inhabited by aliens. As they jump up from behind bushes or come along the path, you must shoot them before they shoot you.

## • GS81 Mini Prix

This is a grand prix car racing game that has you behind the wheel of a Formula 1 Lotus. A game screen is displayed that has side by side windows. One window shows your progress as you go around the track, and the other shows the view surrounding your car. All action is controlled with a joystick. Steer with the stick, accelerate with one button and brake with the other. The documentation for this game is in French. This game must be booted from Slot 5, Drive 1. Mini Prix is from FTA of France.

## • GS82 Space Clusters

This is a clone of Galaxian, an arcade-style game where space invaders swoop down from the top of the screen to attack your lone space craft. You use the joystick to maneuver out of the way and fire missiles at them until you have decimated their ranks. The animation on this program is very fast. It must be booted from Slot 5, Drive 1.

## • GS83 Various GS/OS Games

This disk contains 8 different games. Antetris is another Tetris-like game where you start the game with a logjam of Tetris-like shapes arrayed at the top of the screen. You control a gun at the bottom of the screen and attempt to shoot the Tetris shapes as they begin to fall. Senseless Violence II is a shoot 'em up with a anti-drug message, that can not hold up as a sequel to the first Senseless Violence. Power Play is a game that has four different modules called Four Play, Tron, PigNBull, and Gridlock. Mage Maze, a shareware game written by Davis Hallwas, is a richly detailed IIGS maze game. Each maze has 10 levels that contain traps and doors that lead nowhere. All that's displayed on screen is a compass, and an animation that charts the players travels through the maze. Also included are the games Beast, Elevators, Romulans and Lunar Landing GS.

## • GS84 Star Wizard

This disk contains a strange game of sorts. There really isn't much you can do to call it a game. It's more a demonstration of SHR graphics and technique. Its still fun and great to look at. Its from FTA. Must be booted in Slot 5, Drive 1.

## • GS85 Where the Hell is Carmen Santiago?

This is a ProDOS 8 game that is based on the Carmen Santiago series. You are now chasing Carmen thru Dantes Inferno. There are high res graphic screens that aren't as good as SHR graphics, but the story line is interesting and fun to play.

## • GS86 Columns Version 2.0

This is a Tetris-like game in which you manipulate falling blocks of different patterns in sequences of three or more blocks arranged horizontally, vertically or diagonally. When you succeed, the matched blocks disappear. The program features a rock and roll soundtrack, digitized sounds and great graphics. It can be a very addictive game.

## • GS87 Star Trek Classic GS

As Captain Kirk, your mission is to make the galaxy safe from the Klingons. You have 31 days to complete your mission. Use the Enterprise's navigational system, long and short range scanners, photon torpedos and phaser banks! This shareware game is a complete rewrite of the classic text-based game that has been around for years. It's the same, fun game but with IIGS full-color graphics and music background. The program requires System 5.04, 1.5 Megs of RAM and two 3.5" drives or a hard disk.

## • GS88 Lotto GS

Lotto.GS, a lottery number generator which picks random lottery numbers for you, Quick-Pick style. You can also enter the winning numbers from previous weeks and it will generate a "hot list" - numbers that are due to come up.

## • GS182 Memory Cards

This disk contains three classic card games. They are Wisconsin Rummy, Hearts and Memory Cards. All of the games use the full graphic capability of the GS. Wisconsin Rummy is a typical gin rummy game in which you try to group your hand into groups of three or four cards that are similarly suited or are consecutive. Hearts is based on the card game by the same name. You take tricks but try to avoid taking any hearts or the Queen of Spades. Memory Cards is a version of Concentration. It is filled with amusing graphics and sound effects. As the game starts, a series of cards are shown, all face down. You try to find the pairs of cards which match. The player with

the most matches is the winner.

• **GS205 Arcade / Strategy**

This disk contains some great fast action IIGS games. Dr. Mario is yet another Tetris like game. You'll need to line up the multi-colored falling capsules in a test of speed and strategy. An addicting game! Quintette comes from France and is two games in one: Quintette and Go Maku, two board based strategy games. Completely mouse driven. Puzzle GS is a puzzle game that demands logic and strategy. Match Game will challenge you as you try to outsmart the computer. 15 matches are presented on screen. Remove 1,2 or 3 matches at a time, and try not to be left with just a single match. Pac Man NDA is a New Desk Accessory written by Jim Sulsine, and is a derivative of the Pac Man game. This game can be played from within any IIGS program that displays the Apple menu. Use the "A,Z,J, and K" keys to navigate through the maze.

• **GS209 Teenage Queen**

This is a poker game which uses the mouse and includes sound and color graphics. The nature of the game and the graphic screens are meant for adults only. Some members may find it a little risqué but the game is well made and easy to play, and can be addictive until you have beat your opponent once, and then the novelty wears off. The disk must be booted from Slot 5, Drive 1 to load.

• **GS217 Easy Dead**

This is a new arcade game by the guys at FTA. Its kind of like Arkanoid, but different. Its quite simple to play, but can be addicting. No documentation is provided, and the disk must be booted from Slot 5, Drive 1 to run.

• **GS218 Sensei GS**

This is a new karate simulation game from Miami Beach Software of France. It is a great game where you fight in karate competition. Great action and graphics. Documentation is provided as a AWGS file but the problem is it is in French. The disk must be booted from Slot 5, Drive 1 to run.

• **GS220 Guadacanal v15.0.1**

Guadacanal is one of the most richly detailed computerized wargames ever developed. It simulates the events taking place in the Pacific theater in 1942. It is a two player game, playable in person or over a modem, that pits an American admiral against a Japanese admiral. Each admiral commands all of the forces that were available at the time including 170 naval vessels, hundreds of aircraft and about 50,000 troops. The players assemble task forces and move independently of each other. Detailed SHR maps are

included along with extensive documentation.

• **GS230 Misc. Fun**

This disk contains a whole assortment of animation demos and other colorful programs that your IIGS hasn't seen yet. Among the programs included are: Air Force, Beyond, Color, Cyclone, Dufus, Floor Tiles, Joy, Mandelbrot, Overcycle, Power, Rings, Stars, and others including one of the most ingenious, yet kind of useless programs by Bill Heineman called "Bottles of Beer", which will sing the old familiar song but gives you the chance to enter in the number of beers the song starts with. I entered 149,745 bottles and it started to sing backwards from that number. Imagine just sitting and letting it go all the way back to 1 bottle of beer....well either can I! Disk donated by Joe Kohn.

• **GS233 Best of ProDOS 8 Games**

This disk contains a gigantic selection of ProDOS 8 games, to numerous to list. Included is a version of Columns game that is quite interesting. There are over 40 games on this disk! Can you guess who donated this disk? Right!

• **GS248 Bouncing Ferno'**

This is a Marble Madness type arcade game from FTA. It has colorful graphics, sound effect and music. You must guide your round ball through numerous platforms and hurdles. There are three levels, each with 25 different play fields. You can play the game with either a joystick or mouse. On each level you will try to roll over and pick up a small object before going on to the next level. There is even an editor for you to create your own levels. Bouncin Ferno' is hard disk installable; if copied to hard drive, just double click on P8.Loader to run the game. If run from floppy drive, just boot the disk.

## Desk Accessories & Utilities

• **GS01 Business Programs**

This disk contains various business type programs including: AWGS Templates, Basic Calc, BookMinder, Calculator, File Cabinet, FredWriter, FreeWriter, Loan Stuff, Stocks, Survey, Tax.87.

• **GS11 Various Copy Programs**

This disk contains 5 copy programs : BAC, Copy, DigiCopy GS v1.0, DiversiCopy and Make. Included is a program to make a back-up copy of the Arkanoid game (Ark.Bu).

• **GS12 Photonix 1.46**

Photonix is a fast disk copy program. The program was produced by the FTA(Free Tools Assoc.), the same group that produced the highly acclaimed Nucleus). Photonix is a shareware program and requires 1.25 MB. It employs a unique graphics interface that includes animation and music. It also uses its own unique operating system and must be launched from a disk in Slot 5. Photonix does an image backup, meaning that it can copy any non-protected disk, including those created under System 5.0.2 that contain resource forks. It also allows one to alter the interleaving to achieve maximum performance. It has the completely unique options to defragment disks as they are being copied and to detect several viruses on the disk.

• **GS13 ZZ Copy 2.21**

Another fast copy program for disk copy. This was the Jan91 Disk of the Month. Both ZZ Copy and Photonix are excellent disk copying programs.

• **GS41 Classic Desk Accessories (A-G)**

This disk contains various CDAs including: Alarm, Alink, Area Codes, Arkanoid Cheat, ASCII, Calculator, Calendar, CDA Stopper, CDATerm, Clock v1.1, Damenuzap, Desk Manager, DeskLink, DeskShell, Disk Info, Dump It, Forth Editor.

• **GS42 Classic Desk Accessories (H-N)**

This disk contains various CDAs including: HDB, Int.Det, IW.DA, Load Dump, Mangle, Marvin, Master, Mempeek, MiniTerm, MouseText, MouseTrap, New Master, Nifty List.

• **GS43 Classic Desk Accessories (O-Z)**

This disk contains various CDAs including: P8CDA, Password, Pearl, Peeker, Pic Saver, Power House, Print Screen, PWFix, Rat.Calculator, ScratchPad, Screen Dumps, Screen Blanker, Screen Dump, SetInfo, SetSlot, SHR Time 10 Second save, SlotSwitch, SpeedSwitch, System Info, Text Clock, ToolShed, Type It, TypeWriter, VisiBell, Write Protect.

• **GS44 New Desk Accessories (A-G)**

This disk contains NDAs from A thru G including: Accessory Chooser, AlarmClock, BackGround Music 2.0, Blackout, Cache, Calculator, Calendar, Chronograph, Clipboard, Clock, Concentrate, Confusius, Control, Control Panel, Doodle Pad, DplInd, Dual Clock, Enigma, Fadeout, File Info.

• **GS45 New Desk Accessories (H-N)**

This disk contains NDAs from H thru N, including: Havok, Info, Kalideo, Keycap, Keyrapper, Kilroy, Locator, Mac for GS, Master, Meltdown, Memory,

Memory Bar, Memory Check, MenuDA, Menutime, Moon, Mouse, Mouselocator, Mr. Apple, Mr. Confucius, NoDos 16, Notepad.

• **GS46 New Desk Accessories (O-Z)**

This disk contains NDAs from O thru Z, including: Online, Oval, Panel v2.0, Panic, Password, PhoneFiler, Pixel Ruler, ProDosFiler, Prefix, PrintIt, Puncture.Window, Puzzle, Reader, Rinky, Saver, Scrapbook, Screen, Screensaver, ShowPic, ShowText, SmileyClock, STV, Talking Mouse, TextReader, Tool Version, Two Apples.

• **GS47 CDA & NDA Programs**

This disk contains various NDA/CDA Programs including: DASelect, P8 CDA Load, CDA Stopper, Desktop Mod, Inst. CDA, Reset DA, Setup Select.

• **GS56 Font Programs**

This disk contains the following font utility programs: Font Doctor, Font Editor, Fontastic2, FontView,Font Info.

• **GS57 Font Programs**

This disk contains more font utility and editing programs: Fontasm, Font Changer, Font Scan

• **GS93 Icons**

Icons can dress up your GS desktop with an apple for ProDOS, a rocket for Basic.launcher and many more. Just put the icons in the ICON folder and watch the results.

• **GS94 Icon.Editors**

Contained on this disk are the three Icon editors available in the Apple II world: Icon Ed 1.03, Diced1.1.1, TIE

• **GS95 Label Makers**

This disk contains two 3.5" disk label making programs written in BASIC, and one GS/OS program called Mouse Label which will print mailing labels.

• **GS96 Program Launchers**

This disk contains over 20 launching programs written in BASIC, ProDOS 8 and GS/OS. The contents are as follows: Fast Boot v3.1, DIR, FindAFile, Finder Fixer (by Matt Deatherage), JumpStart 2.2, Launch 2 Plus, LaunchBoxv1.0, Main Menu, Menu, P8 Booter, P8 Launch, PROCAT, ProMenu, Pups, SelectRAM, Squirt and Squirt 16.

• **GS97 JumpStart 2.6**

JumpStart is a full featured program launcher and utility program that is a replacement for the Finder. JumpStart allows one to easily create a master menu, or run list, of programs and then launch any of those

programs with a single mouse click. JumpStart does everything the Finder does, and then some.

• **GS164 Utilities**

This disk contains various utility programs written in BASIC. Also Binary files, initialization files, and a print buffer program is included. Also on this disk is Memory Tester program which will test your memory card.

• **GS165 GS/OS Utilities**

This disk contains the following programs which can be used to alter the way you interact with GS/OS: Custom GS/OS, DA Menu Zap, Desk Top Mod, Dialog Designer, Dialog Layout Utility(DLU)v.3, File InfoNDA and Max Color (by Jason Harper).

• **GS166 GS/OS**

This disk contains various GS/OS shell programs and a program called ProLine.

• **GS167 P8**

This disk contains the following ProDOS 8 utility programs: Davex v1.3, Boot Slot 6, Apt-Zap, Convert (DOS3.3 to ProDOS), Executioner, F.Disk, Fun Keys v0.4, PBH 3.3, Reboot, Speed, SReset and more.

• **GS168 Text & File**

Contains various text related utility programs: A.Textspy, AWP Strip, Cat.Text, Chamelion, Fast Text, File Chopper, Show Files, Show Text, Splitter, Strip It and Type Changer.

• **GS169 Macintosh to GS**

The File transfers programs from Macintosh to Apple II included on this disk are: A2FX7, Mac to GS v.2, MacDown and MacPaint to GS.

• **GS170 UtilityWorks GS v.1.2.1**

This disk contains a fantastic shareware program by George Wilde. This program has the ability to load save and print any type of SHR graphic, an AppleWorks word processing file, an ASCII text file, and even AWGS word processing files, icons and GS fonts. It will also print out the word processing files in the GS fonts. Also contains a hard disk backup program. This is a very useful utility program and contains all of the disk and file utilities. It will also launch another program.

• **GS171 UtilityLaunch v.2.2.**

Utility Launch is a powerful launching program that sets up numerous screens for launching by icon or text. It has a screen blackout timer, program autostart, and the ability to set slots, speed, colors, select modem and printer parameters, and startup path for any program being launched. Purge memory,

shutdown, boot any bootable device, or do a smart scan of any device. Utility Launch allows for up to 50 menu screens, with each screen having provision for up to 40 simple buttons or 16 icon buttons.

• **GS172 DBMaster**

Although this program will run on an Apple II it was distributed on a 3.5" disk and is included here because it was one of the best and most popular commercial databases available for the Apple. It has now been released as shareware so you can try it to see how you like it.

• **GS173 Pic Librarian**

On this disk is the graphics utility program Pic Librarian which allows you to categorize your SHR graphics and print out small versions of them with many per page.

• **GS174 Second Chance v1.0**

Second Chance, by John R. Majka, is a shareware gray scale graphics enhancement program for the Apple IIGs. Graphics digitized through various means and those downloaded from bulletin boards are, sometimes, less than what we had expected. Second chance may be able to improve them. Before deleting a graphics file, try to enhance it. SECOND CHANCE can't perform miracles. It can't create something from nothing but the enhancement routines can improve a graphic image.

• **GS175 Virus Protection**

This disk contains numerous virus protection programs. Included are: VirusMD by Morgan Davis, FTFHV (Fix the Festering Hate Virus), BlkOSave, Doctor Daily, Vaccine, Virus Killer and others.

• **GS232 Desktop Utilities**

This disk is a collection of finished Gyrus software that has been written over the past few years, as well as some software from another Australian programmer, Peter Watson. Most of the programs on this disk are shareware. Details of this are provided in the 'Gyrus.Shareware' and the 'PW.PD.Read.Me' files. Most of the programs are lacking in documentation, but this is mainly because we believe that they are straight forward and easy to use. Have a look at them and see what you think! Included on the disk are a vast assortment of NDAs, CDAs, Inits, and other desktop utilities. Disk donated by Joe Kohn.

## Graphic Programs

• **GS02 CheapPaint**

This disk contains a fully functional Super Hi-Res paint program that offers many of the features of the commercial programs. The basic drawing tools are

available. The pencil/paintbrush allows you to draw freehand, in any of 6 brush shapes. For details an airbrush is included. There are the common tools for drawing lines, rectangles, circles, polygons etc., which can be filled in any of 16 colors. Animation by color cycling is available and you can customize palettes. It has a zoom feature along with selecting, cutting and pasting areas. CheapPaint prints in color on your Imagewriter II. It also offers two screens to work on. Before you invest in an expensive paint program, check out this low cost Shareware program.

• **GS32 Modulæ**

If you like Apple IIGS music, graphics and animation, just pop this disk into Slot 5, Drive 1, reboot your computer with Slot 5 as your startup slot, fasten your safety belt and be prepared for a wild and dazzling 3 dimensional universe created by the French software group FTA. Modulæ starts where Nucleus ended and is an interactive demo of animation played to toe-tapping rock music. As the 30 minute demo begins, learn about FTA, presented in a way you've never seen before. Click your mouse to get to the module that displays basic star effects and then progress to the lined 3-d, vector balls, free flight, fillmode 3-d and animation modules. Most modules allow user input by clicking the switch to go from the automatic mode into the manual mode. Requires ROM 01 with 1.2 Megabytes or Standard ROM 03.

• **GS39 FTA X-MAS Demo**

This disk contains various graphic and sound demos from FTA. Boot the disk from Slot 5, Drive 1 and select the demo from the menu with your mouse.

• **GS 206 Animaga FTA**

This disk contains eight beautifully animated sequences that come complete with Sound Smith soundtracks. It is from FTA. All animations have been included on the French Magazine on a disk, Pom's and Toolbox. To run this disk, change the Control Panel to boot from Slot 5, and reboot. Select the animation with the arrow keys or your mouse. Click on the mouse to return to the main menu.

• **GS 207 Delta Demo**

If you liked Modulæ by FTA, you will love this fast-paced sound and animation demo. Boot disk from Slot 5, Drive 1.

• **GS58 Fractal Programs**

"Mountain Maker", a \$5 shareware gem from Ryan Olson, creates stunning 2D or 3D fractals resembling mountains and lakes. It can generate an image in minutes, so you can watch a natural landscape form before your eyes. "Yet Another Fractal Program (YAFF)" is a great fractal generating program for the

IIGS. It allows you to create Mandelbrot, Julia, Dragon or Biomorph fractal graphics. It is very easy to use and contains many useful help screens. The fractals can take a long time to generate, but you can limit the size of the area and the number of iterations so that the fractal is generated within 15 to 30 minutes.

• **GS59 Fractal Programs**

This disk contains three fractal generation programs: FractalGS is a program that creates beautiful fractal geometric images (written by Steven Disbrow of GS+). Also included is Manset and Mt.Lake.

• **GS108 Graphic Programs (A-D)**

This disk contains four graphics generation programs that show off the capabilities of the IIGS: Designer, Fatworms, Display and Color Demo.

• **GS109 Graphic Programs (E-Z)**

This disk contains five graphic generation programs: Moire, a program that displays constantly moving animated graphics. Mosaic, a program that generates kaleidoscopic special effects, SKAlid, a program that generates kaleidoscopic animation. Swish, a program that creates more beautiful graphic images and SuperLather, which allows you to design 3 dimensional plots of cylindrical objects that lathes can generate.

• **GS208 Simple Animation Program**

Kendrick Mock's freeware Simple Animation Program (SAP)v0.5 allows you to create animated sequences complete with SoundSmith soundtracks and lets you easily add digitized sounds to your animations. No programming skills are necessary to use SAP to create stunning animations. All that's needed is 1.25MEGS of RAM, imagination, and a paint program to create backgrounds, then add animated actors, and Sound Smith songs. Three modules are included. Use the projector module to run the actual animations, one of which is included on the disk. Use the Actoredit module to create action and the Screenedit module to piece together your animation. Complete documentation and a step-by-step tutorial is included. Several other animation programs are included on this disk: Super Magic, Overcycle, Power I and II, and Wierd Animation.

• **GS216 Nucleus**

This program, which comes from Europe, is a dazzling display of IIGS graphics, animation and music. A graphic object that looks like a strand of DNA appears within a window on the screen, surrounded by shooting stars. The object turns and twists around 3 axes, making a nice 3-D show. You can control the movement and size of the object, and all the while have toe tapping rock music playing. Change the song with the enter key. Control the axis of rotation with the

number keys. Turn the music up with the right arrow key. Add more stars with the \* key and use the = key to display the next object. Look around the border for the instructions.

• **GS219 The SAP Wall**

If you really want to see what the SAP animation system is capable of producing, then check out King Lerch's version of Pink Floyd's "The Wall". One of the best selling Rock albums of all time, The Wall was originally recorded in 1979, and has since been made into a movie. It was last performed at the site of the Berlin Wall in 1990. This "rock opera" includes some of the best rock music ever recorded. King Lerch has created a wonderful tribute to Pink Floyd and The Wall on this disk. Complete with powerful music adapted from the album, and graphics reminiscent of the movie, this version includes 3 songs transcribed using Sound Smith. It also includes digitized sounds, and remains remarkably faithful to the original album and movie.

• **GS224 PixMix**

PixMix allows you to load any IIGS Super Hi Res graphic and the program then recreates a jigsaw puzzle from the graphic. A graphic can be broken up into as few as 6 blocks, or as many as 60 smaller blocks. Using the familiar Apple Desktop with pull down menus, PixMix allows blocks to be swapped with a click of the mouse. 25 graphics are supplied along with the program, or you can use any other IIGS SHR graphic.

## SHR Clip Art

**Clip Art:** These disks contain clip art images for use with 640 mode, and some 320 mode, IIGS specific programs such as AppleWorks GS, Graphic Writer III, HyperStudio or other page layout and SHR paint programs. Also listed are disks which have 320 mode Scanned Images.

- **GS03 - GS10 SHR Clip Art**
- **GS184 SHR Clip Art**
- **GS185 Scanned Photos - Baseball**
- **GS186 Scanned Photos - Outer Space**
- **GS187 Scanned Photos - Famous people**

## SHR Graphics

**IIGS Super Hi-Res Pictures**

These disks contain Super Hi Res pictures for the IIGS. These pictures can be used in any of the GS Paint programs such as Platinum Paint, Paintworks Plus or Cheap Paint. The disks can be booted and the pictures will be displayed by a slide show program

on the disk. They can also be viewed by the several display programs in the library.

- **GS103 Apple Preferred Format (A - B)**
- **GS104 Apple Preferred Format (C - D)**
- **GS105 Apple Preferred Format (E - K)**
- **GS106 Apple Preferred Format (L - R)**
- **GS107 Apple Preferred Format (S - Z)**
- **GS111 Packed Super Hi-Res. (A - N)**
- **GS112 Packed Super Hi-Res. (O - Z)**
- **GS113 Paintworks Animated (A - I)**
- **GS114 Paintworks Animated (J - Z)**
- **GS115 Paintworks Packed (A - J)**
- **GS116 Paintworks Packed (K - Z)**
- **GS117 Super Hi-Res. (A)**
- **GS118 Super Hi-Res. (B)**
- **GS119 Super Hi-Res. (C)**
- **GS120 Super Hi-Res. (D - E)**
- **GS121 Super Hi-Res. (F - G)**
- **GS122 Super Hi-Res. (H - L)**
- **GS123 Super Hi-Res. (M)**
- **GS124 Super Hi-Res. (N - O)**
- **GS125 Super Hi-Res. (P)**
- **GS126 Super Hi-Res. (Q - R)**
- **GS127 Super Hi-Res. (S)**
- **GS128 Super Hi-Res. (T)**
- **GS129 Super Hi-Res. (U - Z)**
- **GS196 Lovely Ladies**
- **GS197 Cartoon Characters**

**3200 Color Graphics**

Although the Apple IIGS is capable of 4,096 different colors, it can only display 256 colors at any one time. That limitation is no longer valid. Each of the following disks contain graphics with 3200 different colors. Most of these graphics were created on other machines and ported to the IIGS, but they look great on the RGB monitor. These graphics are for viewing only, they can not be printed out. A special viewer that allows you to see these 3200-color graphics is also included on each disk.

- **GS110 3200 Color Graphics #1**
- **GS181 3200 Color Graphics #2**
- **GS195 3200 Color Graphics #3**
- **GS211 3200 Color Graphics #4**

## Print Shop GS Graphics

✓ **GS99 PS.Graphics (A-H)**

This disk contains over 270 different Print Shop graphics for use with Print Shop GS. The graphics are arranged in folders which are alphabetized. There is a mixture of color and black and white graphics.

✓ **GS100 PS.Graphics (I-S)**

This disk contains over 270 different Print Shop graphics for use with Print Shop GS. The graphics are arranged in folders which are alphabetized. There is a mixture of color and black and white graphics.

✓ **GS101 PS.Graphics (T-Z)**

This disk contains over 90 different Print Shop graphics for use with Print Shop GS. The graphics are arranged in folders which are alphabetized. There is a mixture of color and black and white graphics.

✓ **GS102 PS.Fonts/Borders and Patterns**

This disk contains fonts, borders and patterns for use with Print Shop GS. Contained on the disk are: 31 color borders, 21 mono borders, 99 fonts, and 8 color patterns.

## Sound Utilities

• **GS139 Sound Programs**

This disk contains 5 different sound programs: Sound Studio will play and modify any Digitized sound file., Start SoundV.12, plays a digitized sound when the system software is loaded, and SysBeep, a program to change the sound of the IIGS bell. Also included are two more sound utility programs Tape Deck and Noize 1.0.

• **GS140 ACER 1.0**

ACER, by Joe Jaworski, an Audio compression and expansion utility designed to save disk space, speed disk access, and speed uploading/downloading of large, digitized sound files. ACER uses the ACE toolset which specifically compresses/expands digitized audio files in a highly efficient way. Contains on the disk also a large number of sound files for use with ACER.

• **GS141 Sounds A-L**

Binary sound files.

• **GS142 Sounds M-Z**

Binary sound files.

✓ **GS143 HyperStudio Sounds**

This disk contains numerous sound files for incorporation into your HyperStudio stacks.

• **GS144 Long Play**

Long Play version 2.0.1, by Dave Huang is a program that plays digitized sound files. What makes this program different from the rest is its ability to play sound files of any size, even if they are larger than the available RAM.

✓ **GS198 - GS199 HyperStudio Sounds**

More sounds for use with HyperStudio stacks.

✓ **GS244 rSounds.01**

• **GS245 rSounds.02**

• **GS246 rSounds.03**

These disks contain approximately 50 each sound files for use with your new System 6.0 Sound CDev (Control Panel Device) feature. Just copy the sound of your choice into the CDev folder in your System folder and when you double-click on Sound in the Control Panel select the sound you want for the event you want. Pretty simple! Buy these disks one at a time or all at once. The hard part is trying to decide on the ones you want to install!

## Music

• **GS130 MidiSynth Jukebox**

The sounds produced by this remarkable system are unlike anything you have heard before. Jukebox is a Hyperstudio stack that not only plays the songs on this disk but those on the following disks and any other MidiSynth song disk. It also includes TOOL 035 which you must place in the Tools subdirectory on your GS/OS System disk. To provide you with an idea of just how great MidiSynth songs are, we're a good cross sampling of music on this disk, so that no matter what your musical tastes are, there are bound to be songs on this disk that will "knock your socks off". There's classical selections, including Ravel's Bolero and Pachibel's Canon in D. There's a selection of popular songs, including Puff The Magic Dragon, Blue Moon, Classical Gas and the Theme from Goldfinger. For the Beatles fans there's Martha My Dear and Let It Be. For rockers, there's a version of The Doors' Riders on the Storm.

• **GS131 MidiSynth Song Disk**

This disk contains 12 musical selections of many familiar popular songs. Included are Africa, Baby Elephant, Day Tripper, Hard To Say, Mork, Nadias Theme, Night Moves, Ommadawn, Misty, Theme from Star Trek: The Next Generation, Take My Breath Away and When You Wish Upon a Star.

• **GS132 Song Playing Programs**

This disk contains two song playing programs: JukeBox, Play Song (which will play Music Studio songs), and one utility program for Music Construction Set.

• **GS133 Diveratune Demo**

This disk contains the demo version of the Divers-Tune music recorder program by Bill Basham. It will play the song "Grand Old Flag".

- **GS134 Music Const. Songs**  
This disk contains over 100 various songs which you can play with Music Construction Set.
- **GS135 Diversatune Songs**  
This disk contains over 60 songs you can play with the Diversatune music program.
- **GS136 Music Studio Songs Disk 1**  
This disk contains over 30 songs you can play with Music Studio.
- **GS137 Music Studio Songs Disk 2**  
This disk contains over 30 songs you can play with Music Studio.
- **GS138 Music Studio Songs Disk 3**  
This disk contains over 30 songs you can play with Music Studio.
- **GS145 Sound Smith v1.0**  
This disk includes the Sound Smith Program files and 1 sample music file. Sound Smith is a 14 track sequencer that can be used to create music on an Apple IIGS. The sound quality is superior to any other music program on the market. Sound Smith uses standard ASIF instruments. When instruments are loaded, a piano keyboard is shown, and one can play that instrument by clicking on the piano.
- **GS146 Sound Smith Song Disk 1**  
This disk contains 6 music files for use with Sound Smith. The names of the selections are: Guetto4, Crystal Hammer, Aldabaran, Footloose, File 52. One of the tunes is a file that demonstrates how to use Sound Smith songs with The Music Studio.
- **GS147 Sound Smith Song Disk 2**  
This disk contains 9 music files for use with Sound Smith. The names of the selections are: Amegas, Behind, Blizzard, Cambodia, Duggar, End Theme, Garcon, Moments in Love and S114.
- **GS148 Sound Smith Song Disk 3**  
This disk contains 7 music files for use with Sound Smith. The names are: Axel F, Big in Japan, Forever, Jungle 2, File23, File35, and File42.
- **GS149 Sound Smith Song Disk 4**  
This disk contains 8 music files for use with Sound Smith. The names are: S118, Still, Jigsaw, Blue Monday, Impact, Nothing, Impacto, and Sarcochaser.
- **GS150 Sound Smith Song Disk 5**  
This disk contains 10 music files for use with Sound Smith. The names are: Against All Odds, Carmen, Footloose 2, Hip Hop, Modulae, Modulae Intro,

Smoke on the Water, Space Cluster and TMNT.

- **GS151 Instruments Disk 1**  
This disk contains various musical instruments which you can use to create your own Sound Smith songs.
- **GS152 Instruments Disk 2**  
This disk contains more musical instruments which you can use to create your own Sound Smith songs.
- **GS200 Sound Smith Song Disk 6**  
This disk contains 9 music files for use with Sound Smith. The names are: Chasm, Drums a Plenty, JCD, MegaBlaster, Rush Scars, Stormee, V.O.7 Theme Song.
- **GS210 NoiseTracker v1.0**  
This is the latest version from FTA of this excellent IIGS music program, fresh out of Joe Kohn's hands. It is hard disk installable and fully compatible with SoundSmith song files. The FTA has also included the Second Sight Sound editor which you can use to edit and create sounds. NoiseTracker can also load MOD song files created on the Amiga. It also lets you add digitized sound effects to songs. In addition, you can alter the volume of fade-ins and fade-outs to create some sophisticated special effects. The disk has a "read.me" text file on it that explains some of the features.
- **GS 241 GS<IRC Music Disk**  
This disk contains SoundSmith (SS) songs which play on a Jukebox player, using traditional controls such as those found on a CD player.(FF, REW, skip track etc). The disk comes from a group of young IIGS developers known as "GS<IRC". They are individuals who love music and decided that there were too many SS songs that would be released, but would never be heard by a majority of users because they weren't circulated widely. Their goal is to release these songs along with new songs that they have written to the public in a manner that promotes their wide spread distribution. The group is a supergroup of young IIGS talent: Ian Schmidt (Audio Zap), James Brooks (Columns 2.0), Jim Maricondo (DYA), Tim Meekins (GNO), and Dave Huang (Long Play). Lets hope this talented team keeps up the great work!
- **GS242 SynthLab Song Disk**  
This disk contains 20 great sounding songs for use with that new SynthLab program you have installed with System 6.0. To me the quality of sound produced with SynthLab is comparable to none. (I guess the Bose RoomMate speakers help though). So if you don't already have some, get a pair of external speakers and a Sonic Blaster stereo card and go for it! There are over 20 different song sequences on this disk.

## HyperCard IIG Stacks

- **GS89 Misc. Stacks**  
There's something for all HyperCard GS users on this disk. Included are a few stacks just for fun, including one that generates random Haiku poetry, and one that generates random philosophical statements. There are a few stacks for children, including a Story Board, a word game, and a math exercise. There are productivity stacks, including one that prints a calendar for any month, a To Do reminder stack, a stack to keep track of your CD collection, stacks to keep track of checking and savings accounts, and one to keep track of inventory. There's even a computerized version of the Briggs-Meyers Personality Type test used by psychologists.
- **GS90 HyperTalk Scriptors Tools**  
HyperCard GS includes a built-in powerful programming language, HyperTalk, that allows users, through the use of scripts, to create powerful interactive stacks. This disk will help you as you start to learn about HyperTalk, and will provide you with many routines and tools that you can easily copy into your own stacks. None of these stacks are locked, so you can study the scripts, read about what they accomplish, modify them for your own needs, or just copy them into your stacks. Included on this disk are Animated Icons; ResStation, which allows you to examine resources used in icons, sounds, Xcmds, and cursors; Color Master, a palette manipulation utility; Visual Effects, a library of special effects; Auto-Scripter, a complete set of scripts and routines that you can freely use to spruce up your stacks; BackGround Music, a utility that lets you add music to stacks; DB to Stack, a \$5 shareware utility that imports AppleWorks Data Bases into HCGS; ShowMe, a utility that displays scripting information contained within a stack; and Script Changer, a set of routines that lets you easily modify scripts.
- **GS202 HyperCard Composer**  
HyperCardGS(HCGS) Composer, written by Eric Laaquehay, is a HCGS stack that will be welcomed by HCGS stack designers and those who play any keyboard instrument. When the stack is first run, a graphic representation of a full 88 key piano keyboard is presented. For those who know how to play the piano, they will be able to simply play songs by mouse-clicking on the keyboard. While the musician is playing, this stack will record all the notes into a HyperTalk script that can then easily be copied into any other HCGS stack. There are nearly 30 different instruments included, so your composition can just as easily sound like a saxophone as a digital piano. Ability to play the piano is absolutely essential to use

this stack. For those with that ability, you'll be able to create HCGS sound tracks in minutes, rather than having to laboriously enter notes into a script.

- **GS222 HyperCard Stacks**  
This disk contains three large HCGS stacks: "HyperSubs" describes the world of Diesel Submarines; "II.Productive" is a HyperCard magazine stack with many useful articles and stacks for your use; and "Patriot" which is a stack which describes the Patriot missile system.
- **GS223 HyperCard Stacks**  
This disk contains the following 8 HCGS stacks: Biorhythms, Electronic Music Encyclopedia, HyperTree, HyperUtility, II.Productive.June91, JukeBoxUS, Recipes, and TTHXCmd Stack.

## HyperStudio Stacks

- **GS91 Star Trek: The Next Generation**  
If you love Star Trek, your going to love this 6 disk HyperStudio stack. From the opening chords of the digitized Star Trek theme song to the last entries of shows broadcast during Season 4, everything about this stack is wonderful. Most screens look like the USS Enterprise's computer screens. Detailed information is provided on every episode, every planet visited, and so much Star Trek trivia is included that you'll learn who wrote and directed every episode, even who's voice is used by the computer. You'll listen as the Enterprise warps out of orbit, listen to people beaming up and down, hear phasors and photon torpedoes, and see scanned photographs of the crew. It's almost as much fun as watching the TV show.
- **GS92 Simpson Sound Stack**  
This disk contains a HyperStudio stack which will play sounds from the Simpsons TV show. You can hear Bart and company say all those famous one-liners. The disk contains a run-time version of HyperStudio so you can run the program.
- **GS189 Dinosaur Stack (two disk set)**  
This two-disk stack by Larry W. Linson is all about dinosaurs. The dinosaurs are divided into three major groupings: meat eaters, big dinos and plant eaters. Within each grouping, there are several subgroupings. For each sub-group, the user is shown a chart of the relative size of each dinosaur, a map where the dinosaurs are believed to have lived, a small amount of textual information on each dinosaur and three or four scanned graphics of dinosaurs.
- **GS190 Williamsburg Tour (2 disk set)**  
With this two-disk stack, you can visit colonial Williamsburg without leaving the comfort of your

own home. By using this stack, you will learn about the historical background of Williamsburg and then you will take a tour of the restored village. Be sure to visit the Bruton Church, the old windmill, and the Guardhouse.

• **GS191 Capitol Experience** (2 disk set)

This two-disk stack by Duane Gossett is a simulated tour of Washington D.C., with a few twists and turns along the way, just for fun. There are several sound effects, and some neat animations. You'll visit the White House, the Capitol, and even the Pentagon. This is a program that students, educators, or anyone interested in history should enjoy. This stack included the HyperStudio run-time module, so that the program does not require the use of the HyperStudio program.

• **GS192 Civil War Stack** (2 disk set)

This two-disk HyperStudio stack is a summary of the causes, beginning, major leaders, major battles, and conclusion of the civil War. The graphics were created with a Quickie scanner, and there are some really good battle sound effects and music. The author of this stack, Duane Gossett, says that it has taken several months of his spare time to plan, organize and create this stack. The HyperStudio run-time module is included. This is a shareware stack.

• **GS193 Expansion Stack**

This disk contains a HyperStudio depicting the "Manifest Destiny" of the USA, by Mike O'Donnell of Columbus, Maryland. Maps show the expansion of the USA, along with text explaining each expansion period.

• **GS194 American History**

This disk contains the HyperStudio stack American History, which traces the US from 1776 to the present. Included is pertinent information about the states, and their admission to the Union. Maps are included. On this disk is also a Geography stack which presents a Map of the United States which you can click on any state to gain knowledge of that states various characteristics and noveltys. Also included is a small comical stack named "Shark Attack", which depicts a shark in Odell Lake having lunch.

• **GS243 Environmental / Ecology Stack**

This disk contains two excellent HyperStudio stacks which deal with the fragile ecological balance of our planet. Environmental Problems 1 stack uses SHR color graphics, text windows and sound to explain about water quantity, quality and pollution in industrial areas and third world countries, as well as give information on how we all can help solve the pollution of our water supply. The author is a high school student (Class of 93) from Massachusetts named

Stephen Schwarz. The other stack is called Save the Planet by David W. Hildebrand. It describes global warming, the ozone layer and has a map of the USA which you can click on different areas to show their industrial pollution dangers. The stack also contains an Activity Shop which has a complete the sentence quiz on the environment, and an area which gives you recycle information. Both stacks are very informative, colorful and well made. You must have HyperStudio, or the Run-time version to load the stack.

## Miscellaneous

• **GS153 Tonights Sky 16 / Space Pictures & Sound**

This disk contains both digitized photographs and digitized sounds from the Gemini program, the Apollo program and the Voyager missions to the outer planets. Photos from the Apollo moon landings, photos of the space shuttle, and a number of photos sent back from the Voyager flyby of Jupiter, Neptune and Triton are included. The digitized sounds include interchanges between mission control and John Glenn and Neil Armstrong. Also included on this disk is the great astronomical program Tonights Sky 16. Tonight's Sky is a very well designed and implemented program that can display a graphic representation of a Northern Hemisphere night time sky for any date or location. This program will be of value to anyone interested in astronomy or space exploration. Also included is an AppleWorks data base file that describes the Space Shuttle project.

• **GS154 System.Disk 5.04**

This disk contains the latest operating system disk for the IIGS.

• **GS155 System.Tools 5.04**

This disk contains the rest of the operating system for the IIGS.

• **GS156 - GS158 Tech Notes**

These three disk contain a vast library of Apple II computer technical notes provided by Apple for developers. If you are so inclined these are a must for your reference library. For the non-technical ones these would not mean too much! They are provided in ASCII text file mode.

• **GS159 Telecom Programs**

This disk contains telecommunications utilities including FreeTermGS, Z.Link and Kermit v3.78. FreeTerm GS utilizes the IIGS desktop. It supports ASCII, Xmodem, and Binary II file transfer. The program works with modems that support 300, 1200 or 2400 baud. KERMIT is a program that implements the KERMIT file transfer protocol for the Apple II

micro computer system. It is written in 6502 assembly language and should run on any Apple II or compactible running DOS 3.3 or PRODOS. Z-Link is a program for the Apple II that is small, fast, and powerful. It includes everything you'd expect from a good modem program - capture buffer, terminal emulation, a split-screen person to person chat mode, and the ability to transmit and receive files using several different protocols including XMODEM/Checksum, XMODEM/CRC-16, YMODEM/CRC-16, and YMODEM/Batch.

• **GS160 Compression Programs**

This disk contains numerous file compression programs. Included are: Archive, Binary II, BLU, DDDeluxe, DeArc v.1.2, Digipack, PBH.Pack 3.0, and ProPacker.

• **GS161 TeleCom Utilities**

This disk contains numerous file utility programs. Included are: ALU, ASQ, Executioner (by Glen Bredon), GSVT v1.15, MAUG disk manager, and Squeeze/Unsqueeze.

• **GS162 ShrinkIt**

This disk contains all the different versions of Shrink It by Andy Nicolas. Shrink It is a program that has become the de facto standard for Apple II file compression. Not only can Shrink It GS (v.1.04) extract files created with any Apple file compression techniques, it can also successfully extract files created on Mac, IBM, Atari St and UNIX systems. The latest versions of the 8-bit Shrink It programs are also on the disk.

• **GS163 SnowTerm v2.03**

SnowTerm is a communications program for the Apple IIGS computer. SnowTerm emulates the Digital Equipment (DEC) VT100 and VT52 terminals. SnowTerm runs in the super high resolution graphics mode of the AppleIIGS and uses the desktop user interface. SnowTerm uses the graphics and color capabilities of the Apple IIGS to accurately emulate the VT100 terminal including bold and blinking character attributes, the line drawing character set, and double high and double wide characters. Although the VT100 implements a subset of the ANSI standard, the VT100 and SnowTerm do not implement the (so-called) ANSI color graphics used by some IBM oriented bulletin boards.

• **GS201 The Solar Eclipse**

If you were in Hawaii or Mexico on July 11, 1991, you were lucky enough to be able to see the longest total solar eclipse of this century. For those of us located in California, we were able to see a partial

solar eclipse that day. This disk is all about that eclipse, and while it may not be quite as good as standing on a beach in Hawaii, it combines textual information with scanned photographs, computer modeled eclipses, and even a shot or two of the eclipse taken by a satellite orbiting far above the Earth. The disk is presented in a slide show fashion. Some screens contain historical information on eclipses, others talk about the importance of eclipses as reflected by different myths created by different societies over the millennia. Maps are included showing the path of the eclipse.

• **GS98 Newsletters 1990**

This disk contains all the GSAUG newsletters for the calender year 1990. Some files are in Publish It format and the rest were done in AppleWorks GS format. You may need extra fonts to make the AWGS files look the way the printed newlsetter looked.

• **GS225 Make the Switch GS**

This new disk is a companion to Joe's "Shareware Solutions" column in the latest InCider/A+ magazine. It contains various programs that allow you to "Make the Switch", that is, to transfer programs from one computer platform to another. It also contains the Shareware Solutions article entitled "Make the Switch" written by Joe. Some of these programs are on other disks in the GSAUG library, but a lot of these on this disk are newer revisions, and some programs here are not on any other library disks. Included on the disk are: A2FX (v7 and v8.08), Agate, Audio Zap, Faz II, GIF Strippers, HFS. link, Icon Applicator, Icon Ed, Resource Spy, ShowPic, Shrink It, Sneeze and STS(CDA). Thanks to Joe for his generosity for donating this disk to our library.

• **GS231 Computer Keyboarding**

This is a full blown touch typing tutorial for your use. Essentially, it is designed to help a user, who has little or no typing experience, learn the correct way to type. This program is unique in that it puts greatest emphasis on accuracy, not speed. Lessons cover all letters, and most punctuation marks. They are interspersed with three games that continue typing practice, as well as two that are strictly for fun. Extensive record keeping provides an accurate picture of the user's performance. The user has frequent opportunities to see exactly how he/she is doing with each letter learned. This program will run on any computer that will run ProDOS with at least 64K. It does not require an 80 column card. It is written in a combination of Applesoft BASIC and assembly language. If this program is run on an Apple IIGS, the user should change the Control Panel to set the display type to monochrome. The high resolution graphics look much better when displayed in

monochrome. Freeware by Charles Hartley. Disk donated by Joe Kohn.

## GS Fonts

The following fonts are filetype \$C8 which can be installed on your GS system disk and used with most GS programs like HyperCard GS, AppleWorksGS, HyperStudio, Graphic Writer III, etc. They can also be used on an Apple IIe or IIc with the programs SuperFonts or Publish It 3. The fonts are arranged alphabetically on each disk. Also, disk GS55 is an AppleWorks GS font data base which will display a sample of the style of just about each font type in the club library.

- **GS48**      **Fonts (A-B)**
- **GS49**      **Fonts (C-E)**
- **GS50**      **Fonts (F-L)**
- **GS51**      **Fonts (M-N)**
- **GS52**      **Fonts (O-R)**
- **GS53**      **Fonts (S)**
- **GS54**      **Fonts (T-Z)**

- **GS55**      **Font DataBase**

This disk contains an AppleWorks GS data base file which contains most all of the above font types. When loaded into AWGS you can view samples of the fonts to see what they look like. This file is 600K in size, so you need at least that much free RAM to load it.

## True Type Fonts

These disks are full of True Type Outline fonts to be used with the West Code Software program "POINTLESS". To use them just copy them into a font folder, and use the POINTLESS Control Panel CDev to "add" and then "configure" them. Say goodbye to the "Jaggies" forever

- **GS228**      **TT.Fonts #1**

This is a whole disk full of True Type Fonts for use with the program Pointless. All you have to do is unshrink them and add them to your Font folder and then add them to your Pointless CDev window. The fonts included are: Albatross, Alison, Ashley, Black Forest, Bodidly BOLD, Bouton, Caraway Bold, Celtic Hand, El Garrett, Heildeberg, Inkabod, Jumbalaya, Lilith Light, London, Los Angeles, NeuSans Black, Rome, Script, Steelwolf (Terminator), Style, and Wiltonian.

- **GS229**      **TT.Fonts #2**

Another disk full of true type fonts to be used with Pointless, including: Daves Dingbats, Helvetica,

Kennon, Mazama, and Times.

- **GS249**      **True Type Fonts Disk #3**

This disk contains twenty more True Type fonts for use with the West Code Software program "Pointless". They are NOT SHRUNK, and are ready to use. Just add to your font folder, and then add to your Pointless CDev in the control panel. The fonts included are: Aarcove, Adine Kirmberg, Alexandria, Anedesite, Architect, Athens, Bastarda, BChancery, Bell Bottom, Black Chancery, Bubble, Caroles Chunks, Crackling Fire, Frank Times, Igloo, Neon, Rechtman Script, Wharmby, Zapf Chancery and Zapf Dingbats.

- **GS252**      **True Type Fonts Disk #4**

This disk contains the following fonts to use with WestCode's Pointless program: Albatross, AmbrosiaCap, Andromeda, Artic, AvantGarde, BlackForest, BODIDLYbold, Bookman, CastleFont, CharlieChan, ClassicalItalic, Crillee, Cuneifont, Deusex, Dickens, Eire.Caps, Faustus, Flintstone.Caps, FormalScript, GenoaRoman, Gordon, GothicHand, Granite.Sans, GraphicLight.

- **GS253**      **True Type Fonts Disk #5**

This disk contains the following fonts to use with WestCode's Pointless program: GreenCaps, Informal,Inkabod, IsadoraCaps, KabelPlain,Kathlita, KiddieKorner, Lauderdale, LeftyCasual, LibbyScript, Lombardic, LombardoBeneven, LoopDeLoop, LowerEastSide, LowerWestSide, LynzFont, MacHumaine, MiamiDemi, MiamiNights, Middleton, Mira, Monaco, Montague, NewCompact, NewGarret, Nordic, OSWALDblack.

- **GS254**      **True Type Fonts Disk #6**

This disk contains the following fonts to use with WestCode's Pointless program: Palatino, Park Haven,Phoenix, Picadilly, PixieFont, Playbill, PostCrypt, RansomNote, RichardMurray, Riverside, Rodchenko, Rotunda, SaintFrancis, Sharktooth, Silicon, SlabFace, SlantInformal, Stalingrad, SzymieLight, Sydney, Textura, TexturaModern, Thomas, ToulouseLautrec, Tribeca.Caps.

## Demos

The following disk contain demonstrations of commercial GS software. Most disks will not allow any interaction by the user. The price of these disks are \$2 each. The disks which contain GS software which is no longer commercially available has been deleted from the list.

- **GS15**      **Cryllan Mission**
- **GS23**      **Dungeon Master**
- **GS24**      **Bards Tale**
- **GS30**      **Stack.Central**
- **GS33**      **Gate**
- **GS34**      **Dream Graffix**
- **GS35**      **ProSel 16**
- **GS37**      **GS+ Magazine Sampler**
- **GS38**      **HyperBole Magazine**
- **GS40**      **Space Sharks**
- **GS188**      **HoverBlade**

- **GS226**      **Formulate DEMO**

This is a demo version of the new formula generating program by Seven Hills. Formulate is used to produce formulas for science and math worksheets, tests, and papers. Printing can be done directly or formulas can be exported to popular word processing, desktop publishing, and painting programs. Formulate intelligently knows when something is missing from a formula and symbols automatically scale to fit added expressions. A variety of mathematic symbols are available from easy to use pull down menus. Hardware Requirements: Apple IIGS with 1 MB memory.

- **GS250**      **Your Money Matters DEMO**

This is the demo version of the amazing new personal finance program for the IIGS. Yes, you heard it, new productivity software for the GS! It is a fully featured program that uses a format which resembles the AppleWorks GS spreadsheet, with pull down menus. You can track all your finances, print out checks and a thousand other functions. The demo version is the same as the actual one, except you can't save any data. The program was written by Steve Peterson and published by Software Solutions. It is available from Quality Computer mail-order. I think it is a must have.

## DOMs

(Disks of the Month)

- **Feb.91.DOM**

This disk contains a variety of programs for your use: NDAs include Instant Icon, Font DA 2.0, TWGS Shifter, Scientific Calculator, Solitaire and Print SHR.

CDevs include Twilight, Desk.color and TWGS. Also included is a CDA named SHR Time, a Rastan cheat for more lives, two AWGS files, SuperSynth, Install DA and two games: Tetrotrix GS and Math Music.

- **Mar.91.DOM**

This disk contains a variety of new programs to interest you. Included on the disk is: **Milestones 2000** which is a great new board game for the IIGS. It's an addictive card game in which you race your opponent by playing mileage cards.**Emerald Visions Demo** is a demo of a new paint program to be released this spring which will work with 3200 color graphics on screen. Nice graphics! **SuperInfo II** (v2.1) is a NDA which is outstanding! It combines various types of information into a single NDA. It's well worth the \$12 shareware fee. **GSAUG Newsletter** for Feb91 is included for those who might like to view it on screen. Also included is a font folder with the two fonts used in the newsletter that aren't standard with AWGS. **GSAUG Disk Library** is a text file for all the disks in the library in AWGS format.

- **Apr.91.DOM**

Included on this months DOM are the following programs: **Audio Zap** which is a sound recording/playback program. **GS+ Demo** the HyperStudio stack version of the popular magazine. **Power Play** is a great set of games for the IIGS. **PIC Librarian** is a graphics utility program. **Chronos II NDA** is a stopwatch/Clock NDA. **SHR View** (v3.2) is a great graphics slide show maker.

- **May.91.DOM**

The following programs are offered on this months DOM: **A2FX.7** is a program to read Macintosh disks and transfer the files to ProDOS disks. **TypeFace** will let you view all the characters of any particular font you have installed in your system. **Devirminator II** will test your 3.5" disks for a virus. It only works with 3.5" disks. **GSXEdit** is a text editor/word processor that allows you to display, edit, and print text (TXT/\$04), source (SRC/\$B0) and Teach files. **Next.NDA** from France, is a great NDA that makes your GS look like a NeXT computer while you search catalogs and launch programs! **Elf Write** is a simple easy to use word processor that can use all of the IIGS fonts. **El Macro** is a macro utility CDA designed to create and execute macros from any program, both ProDOS 8 and GS/OS. **View 3200** is a graphic viewer which will load the new 3200 color graphics, of which a few are included. Apr91 GRAVENSTEIN newsletter is also included on the disk, as well as an updated GSAUG disk library listing.

• **June91.DOM**

The DOM features all these great programs: **Lotto GS** which is a lotto game and number generating program with SHR color graphics. **Plotting** is an addicting game demo that you can actually play, from FTA. **RxGs** is a virus detection program from Glen Bredon. **Finder View** allows you to view a picture from the desktop by simply clicking on its icon. **SuperView** is a great new graphics viewer/utility program. **Transfusion Demo** is a modem NDA program demo from the people at GS+ magazine. It only works with external modems. **Spooler** is a CDA that lets you spool certain text files to your ImageWriter II for printing, as you keep on working. **Find File** is a NDA which lets you find any file fast. **Mag Maze** is an interesting maze generating and playing program. **Ball** and **SOD** are two interesting small programs that you may have some use for.

• **July91.DOM**

This DOM contains the following stuff: **Explorer GS** is a desktop graphic adventure game. It's a full graphics program using the desktop/point and click interface. Explorer is shareware (\$10) and written by Jason Smart. **GameMaker** creates scenarios and characters for the Explorer adventure game. It utilizes a desktop based, point and click interface, and has an extensive online help dialog. By Jason Smart, Traveling Faire Software. \$10 shareware fee. **DiskTOPP v1.1** is a program selector using pull down menus and dialog boxes. It requires GS/OS v5.04. **SpyEdit** and **BlockWork** are two sophisticated ProDOS block editors. **Eyes NDA** is a new desk accessory that will follow your mouse around the screen. **WordWorks 2.0** is a great word processor with cut/copy/paste, find and replace, fonts, color text, and more! By Lane Roath. \$10 shareware fee. **Co-Pilot v1.6** is a telecommunication utility program which works in conjunction with *Talk is Cheap* or *Point-to-Point* to make it easy for you to visit your favorite GENIE roundtables. By Kenneth Gluckman. \$25 shareware fee. **The Patcher v1.6** is a set of AppleWorks 3.0 patches assembled by Mark Munz to fix some bugs in AW3.0. Freeware. And lastly, two downloaded conference files from America Online.

• **Aug91.DOM**

This months DOM features a whole bunch of new stuff for your enjoyment: **Horoscope GS** is a desktop program to generate birth horoscopes. Quite an impressive program. Shareware by Jos van Heck of the Netherlands. **Sheepshead GS v2.0** is an updated version of a good card game. **Font Engineer** is an NDA that allows the user to make fonts

available over and above those currently in the system folder. **SoundOff! CDev/Init v1.1.1** is a CDev and PIF which gives you control over the System beep of your computer, and to choose a sound to be played at boot time. 10\$ shareware fee. **Shadowed GS finder icons** are a set of icons colorized and designed to look shadowed. Includes a "Black Hole" trash icon (if you can figure out how to use it). Created with IconEd. **Quit-to v1.1**, is a CDA that allows you to go directly from any ProDOS 8 program to any other program, either ProDOS or GS/OS, without going to the Finder. Quite useful! **GSAUG Library Stack** is a hypercard IIGS stack which shows you all the disks in our library. Created by your librarian as a first attempt at using HCIIGS. **Init Master** is a program that upon booting you can select whichever NDAs or Init's you want to load (by pressing down the Option key while booting). Very useful! **Two Borders** is an Init that allows the user to have two border colors on the IIGS screen; one that appears while you are in a graphics-based desktop applications, and another that appears while in text-based applications. Freeware by Karl Bunker. **DA Select** will let you activate or disable NDAs or CDAs without rebooting. (Donald Alfred Forbes swears by this program!!!). **Sneeze v1.1** is a text viewer, file printer, graphics viewer, file copier and more. ProDOS 8 program. This version adds support of 3200 color graphics on the IIGS. **TearBar** is a CDA which allows for the user to move your paper in your ImageWriter II to the tearoff point and back. Freeware by David Empson. **MenuMaster** is a NDA that will let you change the colors, outlines, and font style of your pull down menu bars. It's an inventive program, but it was a little buggy on my computer. If you want to experiment, go for it! **MiniMize** is a NDA that will shrink a window to the size of an icon. It lets you organize your windows, keeping open the ones that are necessary up front. Shareware by Kris Olsson. **Fonts** - various sizes of two nice fonts; Zaph Chancery and Zaft Dingbats. Add them anytime using the Font Engineer NDA. And finally a text file downloaded from America Online which gives a blow-by-blow description of the events at the latest Kansas Fest.

• **Sept.91 DOM**

This months DOM is a "Best of the DOM" disk, which features some of the best shareware and Freeware in the GSAUG catalog. The following programs are included: Quit.CDA, DA Select, AutoMenus, FinderView, Finder Reader, ElfWrite, A2FX7, Chronos II, Bounce It, MileStones 2000, Calculator NDAs, Solitaire NDA, Print Screen NDA, Desk Color CDev, Install DA, and SHRTime CDA.

• **Oct.91.DOM**

**Flicker NDA version v1.1a** - Program Selector for

GSOS 5.0.4+ Black Knight SoftWare, the same people who brought you the simple-yet-effective QuixElect and DiskTOPP program selectors now introduce a new way to choose the next application. **Flicker NDA** is a new, simple NDA program selector for the IIGS. Basically DiskTOPP mashed into a NDA, Flicker allows you to jump between IIGS desktop applications (1) without having to return to the main launcher/utility each time, and (2) with a minimum of hassle and memory use. Complete documentation is included. **Super DataPath** - This IIGS NDA enhances file dialogs by doing two things: 1. Allows you to set up a default directory for every one of your IIGS applications. The default directory is the one that first shows up in file dialogs. 2. Adds a pop-up menu to open file dialogs that displays all your favorite directories and lets you go right to them by selecting it. This feature can be turned on or off anytime. This program is a shareware (\$10). **Calculator** - a full featured calculator NDA using the SANE environment. Included too many features to note here, but contains full documentation and shareware registration forms. **Glennor GS** - this is a BETA version of an adventure game. It includes only a small portion of the actual game, but it is still playable. **Quit-To version 1.2** - is a CDA that allows you to go directly from any ProDOS 8 program to any other program -- either ProDOS 8 or GS/OS. There's no need to waste time quitting back to the Finder; now you can "Quit-To" any other application! Much like the utilities "RunQ" and "TransProg", but for use from within ProDOS 8 applications. Quick, easy, slick and cheap (shareware). If you use ANY ProDOS 8 programs on your IIGS, you WANT Quit-To! This version (1.2) has many new improvements: A "Run-List" feature to quickly select your favorite programs from (without having to navigate through folders), files selectable by pressing the first letter in their name, upper/lower case filenames supported, and much more. **WriteAway** - is a great word processor program with the familiar GS desktop. It was written by the author of WordWorks and is a great program with every feature you could want. **TMNT** - is a Teenage Mutant Ninja Turtle Card set made for the Todd Wood card games..(Solitaire, Pyramid, Poker & Monte Carlo). It is very easy to read, and uses the Characters' head band color for the suit. My 6 year old enjoys the set, and finds it very easy to use with the Solitaire game. This is a very simple set and does not contain very much detail. **UltraBlank** - is a screen blanker for the gs. It installs as an INIT (perm startup file) and will blank Any video mode the gs is capable of displaying. Reading the documentation is HIGHLY recommended before using.

• **Nov.91.DOM**

**Big Edit Thing version 1.0b3** - a much-updated version of a powerful new desk accessory-based ShareWare word processor. BET supports loading, editing, and saving files from a number of popular file formats. These include Text, Teach, Source, and AppleWorks (1.0-3.0). It allows multiple fonts, sizes, styles, and colors throughout a document. Plus much, much more. **Finder View version 2.0** - a utility that will let you view your pictures from the Finder by simply double clicking on them. Version 2.0 adds the ability to view 3200 color pictures, Print Shop GS Color Graphics, and pictures larger than the screen. Slide showing mode has been added to enhance the operation of viewing multiple pictures. Finder View is a Shareware product. Slide showing and 3200 color picture viewing has been disabled in this version. Individuals that pay the \$10 registration fee will receive their own registered copy which supports 3200s and slide shows. Please be sure to read the enclosed documentation for installation and shareware information. Note: In order for this program to work properly, you have to edit or remove (at least from the Icons folder) any other icons for the graphics types supported; otherwise, you'll either start the application the other icon points to, or you'll get the "An application can't be found..." error. Otherwise, this application seems to operate very quickly and smoothly. **Galactic Conquest GS** - is a version of a computer "board" game. You and up to 3 more of your closest friends can compete to become Supreme Emperor of the Galaxy. Build ships to trade, fight, and conquer planets. See who can construct and maintain the greatest Galactic Empire. The game features a graphic interface, some animation, and synthesized speech (if you have the Talking Tools from Byteworks). The author put a lot of time and effort into this project, and he hopes you like it! Shareware: \$5:00 **HeatSeeker** - is an ultra-fast disk/file copy utility. It blows the doors off of Copy II+. It works on \*any\* Apple II, including the Macintosh LC with the Ile emulation card. Documentation is included as well as information on contacting the author. Please contact him and let him know what you think of the program. NOTE: HeatSeeker is still in beta. Therefore, use at your own risk. **Quick Pick version 1.1** - this NDA generates random quick picks for Ca's 6/53 Lotto game. The author will customize the NDA for any lotto game upon receipt of the shareware fee (\$5) and a blank disk or additional dollar. Version 1.1 removes a bug which caused v1.0 to crash in some applications. **ShutDown Ram Disk Reminder** - if you use the RAM disk on your IIGS for temporary storage of files, or for downloading archive files to, then there have no doubt been occasions when you've accidentally vaporized files because you forgot they were in the RAM disk when you shut down your system. ShutDown

Reminder will rescue from the consequences of this absent-mindedness. When you shut down your IIGS (using the Finder's "Shut down..." dialog, or other GS/OS shut down procedure), ShutDown Reminder will report the contents of your RAM disk, allowing you to check if there are any files that you've forgotten to deal with (an archive you haven't unpacked, for example). Don't let the whole world know what an absentminded, forgetful, space-cadet geek you are; don't let those files disappear into hyperspace; get ShutDown Reminder!! **SlotScan** - this program will scan your computer's slots and tell you exactly what's in them, including a description of the devices attached to any SmartPort or SCSI cards/ports. It also tells you what kind of computer it is running on, & the ROM version, if appropriate. This program is FreeWare. **Sneeze version 1.2** - is a text file viewer (TXT and AppleWorks files), file printer (TXT and AWP), graphics viewer (most 8-bit and IIGS formats, including 3200 color), program launcher (BAS, SYS, and S16 programs can be launched), and file copier (with disk-swapping allowed). It also easily navigates through your disks and folders, and -- as they say -- "much more". Sneeze is 100% freeware, and is a "must have". For all Apple II's later than the II+. This version (1.2) fixes a few bugs and adds several new features, including a better text printing function. **Technical Support** - this CDA shows a list of technical support numbers for companies in the Apple II community (and 1 or 2 companies which aren't). **UltraBlank version 1.3** - this version of the screen blanker adds the capability to set the configuration from the Classic Desk Accessories menu. It should also work with more software. You should read the docs before using. **VirusMD version 2.0** - a completely new version! In addition to quickly scanning full volumes for files infected with Festering Hate, CyberAIDS, and Lode Runner viruses, and repairing directory and boot blocks, VirusMD now sports a great desktop interface using QuickText -- the text mode answer to QuickDraw! You have complete control over a menu/window environment using the keyboard (or mouse). And the speed is incredible! More important, VirusMD has a reputation as a solid, reliable virus detection and \*repair\* utility that presently is able to dispose of all known viruses on the Apple II. Now version 2.0 gives you that rock solid solace, with an interface that would make America Online blush. This package includes the VirusMD application, documentation file (in addition to built-in help), and icon file. Shareware from Morgan Davis Group. You'll love it!

• Dec.91.DOM

**SUPERCAT** - is a IIGS S16 file which will provide an alphabetized catalog of an entire disk or starting at

a specified directory and working its way down from there. The output can be to the screen, a printer, or a disk file. The module called INSTRUCTIONS provides details as to how to use SUPERCAT. \$10.00 Shareware. By Cecil Fretwell. **Sneeze version 1.21** - is a popular multi-function file utility for 8-bit Apple IIGS and the IIGS. It is a text file viewer (TXT or AWP files), text printer (TXT or AWP files), graphics viewer (most 8-bit and IIGS formats, including 3200-color graphics), program launcher (SYS, S16 and BAS programs can be launched), and file copier (with disk swaps allowed). It navigates easily through your disks and folders, and -- as they say -- "much more!" Entirely free and public domain. For all Apple II later than the II+. This version fixes some important bugs in version 1.2's text-display, and has a few enhancements too. **AutoMenus version 1.11** - is \$5 SHAREWARE init that eases the use of menu bars. Menus pull down simply by placing the pointer on them and you need only click on your selection. Version 1.11 fixes a bug in 1.1 that was corrupting 4 bytes somewhere in memory, plus an icon is included and some memory is freed while not using the desktop. **Total Recall version 1.2** - is an easy way to collect the words and phrases that you enjoy most. Practicing their meaning and usage on your computer screen is as easy as apple pie! Whether you are an educator or student, an adult, or learning English as a second language, Total Recall E.V.T. provides the speed and flexibility to make learning fun. **MenuTime version 3.33** - is a \$5 SHAREWARE NDA that automatically puts the time in the empty part of the menu bar. The clock's position and many other aspects of MenuTime are changeable from its window. Version 3.33 fixes the problem when quitting from HyperCard and another program in beta testing. Graphic mode switching (320<-640) also now works fine. V3.33 might fix problems with WordWorks. **Christmas Recipes** - is a Publish It document of Christmas recipes collected for AzApple User Group, Phoenix, Arizona. Just load into Publish It program & install font Candy.24 (included in upload) before printing out. All other fonts used are on the original program disk - Desplaines, Ravinia, & Madison. All graphics have been placed for you. Prints out to 9 pages total. Upload contains several short segments for users with limited memory. **Explorer GS:The Great Hall version 1.1** - fixes many problems found in the original adventure. I would rate The.Great.Hall as a very challenging explorer adventure. There are many traps, and hidden rooms to find. It will take a medium to strong character to survive in this scenario. You must have the Explorer.GS program (including the files Explorer.Data and Explorer.Pic) in order to play this adventure. Remember to search everywhere and to cast a heal spell often. **PSEConvert** - is the ultimate utility for ProTERM Special Emulation (PSE)

files. **DeskSet version 3** - is a rolodex/calendar/memo for stack for HyperCard GS. This version has a completely revamped calendar section and some minor changes to the rolodex section. As with previous versions, DeskSet touts a perpetual calendar which automatically displays the current month. This version also highlights the current day. New memo utility allows for creating memos for future dates (try 2010) and deleting memos one at a time. **ADB to Stack Converter** - this stack automatically converts AppleWorks Classic database files to HyperCard GS stacks. Required fonts are included. Shareware \$6. **Thanksgiving Recipes** - recipes for turkey stuffing & turkey casserole. Collected by Don Davidson & Layout by Pat Kern for AzApple User Group in Phoenix, AZ. Just load into Publish It & print out. Text & graphics are placed for you. Uses Desplaines.10&12, Ravinia.18, & Madison.24 - all on the main program disk. Gobble, gobble! **ColorTerm** - finally brings color text and graphics to Apple IIGS users who use IBM-based BBSs. Most BBSs send ANSI codes for color graphics and text, and until now, no GS software has been able to use them. ColorTerm requires a ROM 1 IIGS with an external Hayes Compatible modem connected via the IIGS' serial modem port. Internal modems, such as the DataLink, will not work. Also, this version doesn't work on a ROM 3 GS. I am working at fixing these problems. NOTE: Before ColorTerm can be run, the font CTfont.5 must be installed in the \*/SYSTEM/FONTS folder of the IIGS. In addition, the IIGS Control Panel must be adjusted. MAKE SURE YOU READ THE DOC FILE before you run the program. ColorTerm will not function if the options are not set correctly. I hope you enjoy ColorTerm. It FINALLY allows the IIGS to use the color codes from IBM-based BBSs. One can go color-blind using AGATE for too long. :) ColorTerm is \$10.00 ShareWare. **Explorer GS:Mars** - A sci/fi futuristic adventure that takes place on the colonies of Mars. All new graphics and data. Character should be around level 20. Not for the weak at heart! You must have the Explorer.GS program (including the files Explorer.Data and Explorer.Pic) in order to play this adventure.

• Jan.92.DOM

This disk contains the companion disk to the article written by Joe Kohn in the January 91 A+Incider magazine. It contains numerous NDAs, CDAs, CDevs, and more to make your IIGS more productive and look better on screen.

• Feb.92DOM

The DOM for February was the new Judo simulation game "Sensei GS", which is disk GS218. The

description of this disk can be found in the Games section of this catalog.

• GS227

March 92 DOM

Burke's Icons - Finally we have those great icons from the GSAUG computer in Burke's classroom. These are icons that our icon artist Burke has hand-crafted. Included are those excellent folder icons and all the rest. Also in this folder is an interesting text file written by Burke talking about Icon editing. It is in AppleWorks GS format and one in ASCII text format. The folder icons are especially artistic! IconED is included on the disk for easy viewing of Burke's Icons. GSAUG Catalog - This is an AppleWorks GS Page Layout file (100K), which includes a description of every disk in the GSAUG library. The catalog is laid out by categories and has a paragraph or two about each disk. I have been working on this for about 3 months and it's finally done. If I can find someone with a Deskwriter printer or some other laser type printer I plan to print it up, make copies and sell it for \$2 a copy. It is 18 pages long and has a disk order form and can be mailed out also. If you use AppleWorks GS you can print it out yourself. The file contains the standard font "Times 12,18, 24, and 48" and one other, "Zapf Dingbat 12". I have included the correct fonts and sizes as "FONTS" file so you can make the print-out look the way it should. Load these fonts into your font folder of your system folder if you don't already have them in there. Quick Click - from Joe Nowak. When you open a disk on your GS desktop and see a text file you can simply double click on it and read it! Install Quick Click in your system folder and the icons in your icon folder and you're on your way! This program may become obsolete when System 6.0 comes out but it works great now. IconAppChecker - by Bill Tudor, is one handy IIGS icon utility. Apple IIGS icon files contain icons to represent you disks, folders, applications and documents. Each icon may have associated with it an "Application Pathname". If a document icon (data file) contains an application pathname, double clicking on it from the Finder will cause that Application to run, usually loading in the document when it starts up. The problem is that, to do this, the pathname of the application in question must be hard-coded into the icon file. Normally you have to use an icon editing program to open up the icon and type in the path name of the program you want to run when you double click on that type of file. This can be tedious, especially if you have a lot of icons and aren't sure which ones have the application pathname set and which don't. IconAppChecker can examine ALL the icons in ALL your icon files, and let you know which ones have invalid application pathnames. Furthermore, it can also SUGGEST a new application path by searching all your disks for the old application name and finding its

new location on your disks. Memory Use (NDA) - is also by Bill Tudor. It gives you a graphic representation of how much of your IIGs' system memory is being used at any given time. Memory Use is public domain. Just copy it to the \*/SYSTEM/DESK.ACCS folder of your system disk and reboot, then invoke it from your Apple menu. Bush Movie (SAP) - This is a Simple Animation Program file that provides an amusing monologue by our president George Bush. When you open the Bush Movie folder, double click on the file named Projector. Video Jazz GS - is the interesting little animation program that was running at the last meeting. It displays an ever changing kaleidoscope of color patterns. Written by Zeb Hodge.

• **GS234 - GS240**

The April 92 DOM is GS/OS version 6.0. It comes with 7 disks.

• **GS247** **DOM.May92**

**System 6 Fixes** - This folder contains three programs that will fix small bugs in System 6.0: FixFindFile will fix a bug in the Find File NDA. Just double-click on FixFindFile and it will automatically do its job. Patcher is a patch to P8 which will disable the pseudo slot/drive mapping that is done on partitions >2 when the ProDOS for System 6.0 is used. By Tim Grams I'm not sure what that means, but if it is useful to you, by all means use it! Sound Patch 6.0 will fix a bug in the new System 6.0 Sound Control Panel's "Shutdown Sound" which often causes it not to play the shutdown sound! To fix your copy of GS/OS 6.0, boot your 6.0 disk or hard drive and launch SoundPatch6.0. It will patch your system automatically. By Greg Templeman. **Custom GSOS 6.0** - Custom 6.0 is a utility that allows you to modify the "Welcome to the IIGs" message on the GS/OS startup screen. SplashEdit is a BASIC program that changes the background color of the startup screen. Auto Menus v2.0 This is a major update. It fixes a few bugs that caused problems with Disk Witch and infrequent crashes with other programs. 2.0 is also completely compatible with Platinum Paint and Font Factory. Compatibility with Word Perfect is improved, but not 100%. Previous versions were inits, while 2.0 is a CDev (control panel device) under System 5 and a stand-alone control panel under System 6. **Quick Launch** - Quick Launch is freeware from Seven Hills Software. It is a finder extension file that when copied to the system.setup folder, will become a pull-down menu launching program in the finder under the Extras menu item it creates. It performs very much like the RunQ utility, except that you don't need to pay a shareware fee to use it! Highly recommended. **True Type Fonts** - This folder contains three display fonts to be used

with the Pointless program from West Code. They are all caps, with no lowercase characters. The font names are Igloo, Crackling Fire and Warmbly. (Ice, Fire and Water) **Paper Saver v1.1** - This new version of the NDA works great to save you paper. Just click, rip and click. By Steven Cole. **rSounds** - This folder contains six different sounds to use in the new Sounds CDev in system 6.0. Just copy them into the Sounds folder in the CDev folder. **Quit to CDA v2.0** - This version 2.0 of Quit-To. Earlier version worked from within ProDOS 8 programs only. Quit-To 2.0 is compatible with (but does not require) System 6.0. By Karl Bunker. **InitMaster v2.0** - This apple IIGS INIT (PIF) file adds "InitMaster" to the system 6.0 Finder "Extras" menu. InitMaster easily allows you to change the active/inactive state of your INITs, CDAs, NDAs, ICNs, Drivers, FSTs, and CDEVs on your system without having to use the Finder's "Icon Info" dislog. Version 2.0 also allows you to save up to 3 of your favorite setting for quick recall. Requires System 6.0. ShareWare...\$10.00 By William Tutor. **Desk Color CDev v3.1** - This is the latest version of Desk Color by Dave Leffler. It lets you change the desktop by replacing periwinkle blue with a graphic or pattern you choose. **LotsaTools 1.0** - The LotsaTools temporary initialization file, once installed in the System.Setup folder on your Apple IIGS System 5.0.4 or higher boot volume, will cause all the major toolsets to be loaded and installed as the default tool configuration for the duration of the session at the computer. This results in potentially drastic time savings. By Eric Shepherd. **GSAUG.Catalog WP** - This is the same file as the GSAUG.Catalog Page Layout, but it is in AWGS Word Processing file format instead. It may be easier to use for some members than the Page Layout version. **Pointless Utility** - Now that System 6.0 is out, most of you Pointless users would love to configure Pointless to use ALL of the characters in each font. Doing this one at a time with Pointless is very slow and tedious. This program will automatically scan your TrueType.List (in your System/Fonts folder) and set each font to use the complete set of characters. By Jay Soffian. **NeuroFinder** - This is a small program which enables the owners of the game Neuromancer to play it from their hard disk. Just copy the file NeuroFinder into a folder with Neuromancer and double-click on NeuroFinder and your'e off and running!

**DOM.June.92**

The June Disk of the Month contains the following programs: **MahJongg Game** - This is a great game which is like the game Shanghai. It is another one of those addictive games that you should just love. There are provided 4 different tilesets to choose from. More tilesets are available on the online services. The object of the game is to clear all the tiles from the screen. To

clear the tiles, you must first find a pair of tiles that match identically. By Chris Heckman and Scott Mathews of Wedge Software. \$5 shareware fee (and well worth it!). **IR v2.0** - This is a Permanent Initiation File (PIF) or Finder Extension File that when you locate it in your System Setup folder of your System folder, it will appear in the Extras menu of the finder. It does a variety of things, including having the ability to instantly load other PIFs or NDAs. From Apple Computer. **Finder Sounder** - Another PIF that will show up in the Finder Extras menu (if you are using System 6.0). Once copied into the System Setup folder you can use it to play the rSounds you can have in the Control Panel, by just clicking on them. It makes it easy to check the rSounds out on disk prior to loading them into the Sounds folder first. **More Info v1.0** - This PIF by Bill Tudor will give you "more info" when you use the "Info" menu command in the Finder. Very impressive. **Hot Keys v1.0** - Here is another PIF by Bill Tudor that is really slick. When loaded into the System.Setup folder, and you access it from the Extras menu in the Finder, you are presented with a Dialog Box which lets you set up one button execution of various Finder functions like System Shutdown. You do the one key command from the Keypad. **GS Shrink It v1.06** - The newest version of GSHK for all you modem types. This version supposedly fixes some problems unshrinking Macintosh True Type Fonts. Freeware by Andy Nicholas. **FontSel v0.31** - FontSel is a CDev that helps you while selecting fonts from a font menu. With FontSel, font-names are written in the font that they name. This way, you can see what you are selecting before you select it. FontSel is copyright 1992 by Jay M. Krell. FontSel is based on MenuFonts, a Macintosh Control Panel from Double-Click Software. To install FontSel, copy it the System:CDevs folder of you startup disk, delete CDev.data, and reboot. **RSounder** - This a program that will convert sound files into a format used by the rSound files used by System 6.0. I have never used it so you are on your own as to whether it does what its suppose to. Documentation is provided. **Icon Stuff** - There are two different files in this folder. "FType Ed" is a GUI-based application which is capable of creating and/or modifying File Type Descriptor tables as described in the DTS File Type Note for File Type \$42. This program gives the advantage being able to add new descriptors without having to wait for the next release of System Software or modify existing descriptors with your own personalized names. As the case with RSounder, you're on your own with this one. Sounds pretty complicated. FTypeED is by Ken Quinn, and if you find it useful send the \$10 shareware fee to the address in the Docs. The other file in the Icon Stuff folder is "Finder.Icon.XRef" is a text file which is a list of Finder info for those of you

who are interested in altering finder icons and application pathnames...Sounds easy enough, huh?

• **DOM.July 92**

The July Disk of the Month contains all the following programs: **SpaceWhiskey By Lane Roath** - This is a fast paced outer space shoot 'em up arcade game. It includes digitized sound effects, and 3-D star fields that you have to navigate through via mouse or joystick. \$10 shareware fee. **CastleVania v1.2 by Michael Cruz** - This ProDOS 8 text adventure game is the second version of the game. Similar to the old Infocom adventure games. It can be loaded onto your hard disk. In CastleVania you start off in Dark Forest, and your mission is to find and kill Dracula before it becomes nighttime. **Catalog Update** - This is an update to the GSAUG disk library catalog. It lists all the new disks added to the library since the Catalog Page Layout file in the Mar92DOM. It is a AWGS word processing file. It can also be viewed using Teach. **One Arm Battle by Ken Franklin** - This is a new version of a great 6-reel slot machine game. The game contains many humorous digitized sounds, and will play back in stereo. Great fun! \$10 Shareware fee. **Eclipse GS by Larry Bell** - Eclipse GS will alert you when the next solar and/or lunar eclipse will be visible in your location. It will even display that next eclipse on screen, or print it on paper. It's Freeware and requires 1 MEG of memory. **MahJong Tilesets** - This folder includes two Tilesets for use with MahJong game included on last months DOM. The two tilesets are "Night" and "Jewel" (which is very impressive). Just copy them to the "Tileset" folder in the MahJong game. **IR NDA v1.01 by J. Krell** - IRnda is a simple NDA that gives you access to the Finder Extension IR version 2.0 or later, from any application. You will need IR v2.0 which was on last months DOM. **AWGS Large Font Patch by Steve Bernacki** - Here's a small program that will patch AppleWorks GS v1.1 and auto-enable you to use fonts sizes with a point range that is greater than 48 points. This auto-enables the newly-found easter egg in AppleWorks GS that does this, without you having to hold down Option-Shift while selecting "Choose Font." The program is Freeware. I have had limited success with this AWGS feature, try it and see what you think. **Bouncin' Ferno Editor Docs by Kid Squid** - This is a English translation of the documentation to the Bouncin' Ferno editor. Bouncin' Ferno is a Marble Madness type arcade game from FTA which is in our library as GS248. You need a TEACH reader to read this file. **Open Any v1.0 NDA by J. Krell** - As Finder-Extensions give you the ability to double-click on various files in the Finder, OpenAny will give you access to these features in other applications via a standard open file dialog box.
