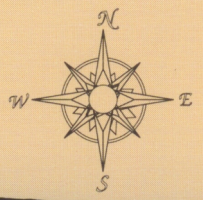
Power of Human Speech + Super Hi-RES, 16-Color graphics NO EXTRA HARDWARE REQUIRED!

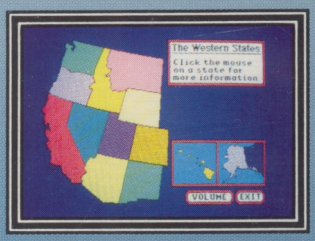
The Talking Schoolhouse™ Series

TALKING U.S.A. MAP

Utilizing the Ensoniq™ sound chip of the IIGS computer, the states are identified in a human voice. Through sight and sound, children learn the names, locations, and capitals of the 50 states. They may also use the mouse to obtain pertinent facts about each state. A quiz option allows kids to test their knowledge of all the state capitals. Children get two chances to correctly identify each capital, receive immediate feedback, and view a running total of their percent of correct answers.

- **Each state "speaks" its location as the mouse is moved around the national map.**
- **Children learn to place each state in its various contexts, as they view national maps, regional maps, and individual state maps.**
- **Kids learn state names, facts, and locations, and are tested on the capitals.**





THE 50 STATES COME ALIVE WITH HUMAN SPEECH AND BRILLIANT GRAPHICS!

The Talking Schoolhouse™ Series

The Talking Schoolhouse programs represent the most advanced technology in the areas of human speech and super high-resolution graphics for educational software. Disks speak on their own; no speech board or additional hardware is required -- only a 3.5" disk drive. Developers working with proven educational concepts have recorded actual human voice and digitized the sound into the computer programs. The result is perfect, natural-sounding speech -- not a synthesized computer voice that only confuses youngsters. Covering all the basic subject areas, the Talking Schoolhouse brings the reassuring voice of a real person into the computer learning environment.
